

Bonneville received two scoping comments by phone:

- A neighboring landowner mentioned that the property where the project activities would occur has an agricultural well and pump that produces high noise levels between April and October when an adjacent alfalfa farm needs irrigation. The noise generated by the pump scares off local wildlife and is bothersome to the neighboring residents. The landowner requests that some part of the proposed project address this noise issue because efforts to work directly with the property owner to address it have been unsuccessful.
- A neighboring landowner expressed excitement about the project but has concerns that the extremely noisy well pump will continue to scare off wildlife. The landowner also asked whether the project sponsor, CTUIR, would repair/re-gravel the access driveway off the main road once construction is complete.
