

## System 009 - Site 501527, Vancouver, WA

Site 501527 is a grocery store located in Vancouver WA. There are two refrigeration circuits: Circuits 8 and 9.

### Circuits 9, Low Temperature, Rack "A"

Circuit 9 (rack A) is a low temperature multiplex system with R404a with 3 compressors (212 MBH total compressor capacity) and 189 MBH total design load located in Vancouver, WA. Liquid subcooling is provided by the medium temperature rack (circuit 8, rack B). The discharge line has heat reclaim that allows hot discharge gas to heat hot water and decrease the gas temperature before entering the condenser. The low and medium temperature systems (circuits 8 and 9) share a single Emerson E2 refrigeration system controller.
