

Categorical Exclusion Determination

Bonneville Power Administration
Department of Energy

Proposed Action: North Fork Salmon and Lemhi Rivers Fish Screen Construction/Replacement 2024

Project No.: 2007-399-00

Project Manager: Eric Leitzinger - EWM

Location: Lemhi County, Idaho

Categorical Exclusion Applied (from Subpart D, 10 C.F.R. Part 1021): B1.20 Protection of Cultural Resources, Fish and Wildlife Habitat

Description of the Proposed Action: Bonneville Power Administration (BPA) proposes to fund the Idaho Department of Fish and Game to construct and replace six fish screens on private lands in the North Fork Salmon and Lemhi Rivers in Lemhi County.

Each site currently supports an aging fish screen that is being replaced with a new design. Fish screens are structures that prevent fish entrapment in irrigation ditches or irrigated fields, and BPA's purpose in their funding is to prevent entrapment and mortality of Endangered Species Act (ESA)-listed Chinook salmon (*Oncorhynchus tshawytscha*), steelhead (*Oncorhynchus mykiss*), and bull trout (*Salvelinus confluentus*). Each structure has been designed according to criteria in the National Marine Fisheries Service's (NMFS) "Anadromous Salmonid Passage Facility Design" (NMFS, Northwest Region, Portland, Oregon, 2011) and would be installed according to all relevant criteria in the NMFS Habitat Improvement Program (HIP) Biological Opinion (NMFS 2020). The footprint of construction activity for each screen action would generally impact less than 0.25 acre. Construction would require removal of the existing fish screen, clearing and grubbing the site with a track hoe, excavating and preparing the subgrade, installing and backfilling the new concrete rotary-drum fish screen and control structure in the ditch, then restoring the site by hydro-seeding following final grading.

The names and locations of these structures are shown in the table below.

Screen name	Water body	County	Latitude/Longitude
L-20	Lemhi River	Lemhi	45.046588 -113.678944
L-44	Lemhi River	Lemhi	44.830225 -113.61111
L-45A	Lemhi River	Lemhi	44.830225 -113.61111
L-45B	Lemhi River	Lemhi	44.809187 -113.573851
LWC-03	Wimpy Creek (tributary to Lemhi River)	Lemhi	45.102054 -113.709599
SNF-03	North Fork Salmon River	Lemhi	45.453852 -113.992276

This Proposed Action fulfills commitments under the 2020 NMFS Columbia River System Biological Opinion and would support conservation of ESA-listed species considered in the 2020 ESA consultation with the US Fish and Wildlife Service on the operation and maintenance of the Columbia River System. These actions also support ongoing efforts to mitigate for effects of the FCRPS on fish and wildlife in the mainstem Columbia River and its tributaries pursuant to the Pacific Northwest Electric Power Planning and Conservation Act of 1980 (Northwest Power Act) (16 U.S.C. (USC) 839 et seq.).

Findings: In accordance with Section 1021.410(b) of the Department of Energy's (DOE) National Environmental Policy Act (NEPA) Regulations (57 FR 15144, Apr. 24, 1992, as amended at 61 FR 36221-36243, Jul. 9, 1996; 61 FR 64608, Dec. 6, 1996, 76 FR 63764, Nov. 14, 2011), BPA has determined that the proposed action:

- 1) fits within a class of actions listed in Appendix B of 10 CFR 1021, Subpart D (see attached Environmental Checklist);
- 2) does not present any extraordinary circumstances that may affect the significance of the environmental effects of the proposal; and
- 3) has not been segmented to meet the definition of a categorical exclusion.

Based on these determinations, BPA finds that the proposed action is categorically excluded from further NEPA review.

Attachment(s): Environmental Checklist

Categorical Exclusion Environmental Checklist

This checklist documents environmental considerations for the proposed project and explains why the project would not have the potential to cause significant impacts on environmentally sensitive resources and would meet other integral elements of the applied categorical exclusion.

Proposed Action: North Fork Salmon and Lemhi Rivers Fish Screen Construction/Replacement 2024

Project Site Description

These fish screens are located on existing irrigation ditches in conjunction with irrigation water diversion infrastructure in previously-disturbed riparian, agricultural, or grazing areas along the Lemhi River, Wimpy Creek (a tributary of the Lemhi River southeast of Salmon, Idaho); and on the North Fork Salmon River north (downstream) of Salmon, Idaho.

The project sites are in broad riparian floodplains within a sagebrush steppe ecosystem, and at locations where much of the floodplain and surrounding productive sagebrush steppe lands have been converted to agricultural and grazing uses supported by irrigation diversions from the rivers.

The construction sites are in riparian areas within agricultural fields or pastures, in a larger ecological setting that had naturally been sagebrush steppe prior to conversion to agricultural or grazing use. Each site has been previously disturbed and supports an aging fish screen that is being replaced with a new design. The footprint of construction activity for each screen action is occupied by low-growing grasses, forbs, and shrubs. No trees are present on the construction sites.

Evaluation of Potential Impacts to Environmental Resources

1. Historic and Cultural Resources

Potential for Significance: No

Explanation: Fish screen construction requires the use of heavy equipment, which would have the potential to disturb cultural resources. Each site has had a completed cultural survey, and the results of those surveys are displayed in the table below.

Fish Screen	Resources identified	Eligibility for the National Register of Historic Places	Effects Determination
L-20	L-20 ditch	Recommended eligible	No adverse effect
L-44	L-44 ditch	Recommended eligible	No adverse effect
L-45A	L-45A ditch	Recommended eligible	No adverse effect
L-45B	L-45B ditch	Recommended eligible	No adverse effect
LWC-03	LWC-03 ditch	Recommended eligible	No adverse effect
SNF-03	SNF-03 ditch	Recommended eligible	No adverse effect

On July 17, 2024, BPA sent a letter to the Idaho State Historic Preservation Office (SHPO), the Shoshone Bannock Tribes-Fort Hall Indian Reservation, and the Nez Perce Tribe, and the Confederated Salish and Kootenai Tribes to consult on the results of the survey and the determination of effects of the proposed project actions in compliance with Section 106 of the National Historic Preservation Act. On July 29, 2024, SHPO concurred with the finding of effect; there were no other responses received within thirty days thus their concurrence with BPA's determinations on the effects of the action is presumed.

During construction, protocols would be in place to stop construction and notify BPA for applicable consultation if new cultural resources are discovered.

2. Geology and Soils

Potential for Significance: No

Explanation: Soils would be displaced, compacted, and mixed by the actions of construction equipment, but these impacts would occur on sites that have been previously disturbed by heavy construction equipment when the original fish screens were constructed, and by agricultural and grazing activities. The soils impacted have been previously disturbed during prior fish screen construction. These sites would be less than ¼ acre in size. Impacts from construction actions would be minimized by the application of Conservation Measures (erosion control, spill prevention, etc.) from BPA's Habitat Improvement Program (HIP) Endangered Species Act (ESA) consultation.

3. Plants (including Federal/state special-status species and habitats)

Potential for Significance: No

Explanation: The fish screens would be in, or near, riparian areas, but the sites would be in locations previously disturbed by agricultural and grazing activities; no native shrub or woodland riparian plant communities would be impacted. Conservation measures from BPA's HIP ESA consultation would be applied, which would provide for long-term recovery of the sites and adjacent riparian vegetation.
No ESA-listed, or "special-status" plant species are present in these locations.

4. Wildlife (including Federal/state special-status species and habitats)

Potential for Significance: No

Explanation: Construction would commence in late summer or fall; thus, no disturbance of nesting birds would occur. There would be some home range destruction and displacement of small terrestrial and avian wildlife within the expanded construction footprints of the new fish screens, but this loss would be a few hundred square feet at most and would be of minimal effect to animal populations in the project areas. Larger wildlife using riparian habitats nearby may be disturbed and temporarily displaced by noise and human presence during the construction actions. These larger species would likely not be displaced from their home ranges, though they may temporarily relocate during active construction.
No ESA-listed or "special-status" wildlife species are present in locations close enough to these construction sites to be disturbed.

5. Water Bodies, Floodplains, and Fish (including Federal/state special-status species, ESUs, and habitats)

Potential for Significance: No

Explanation: No construction activities would occur in flowing water. All fish screens would be installed in irrigation ditches outside of the irrigation season or with the ditch flows turned off.
ESA-listed spring Chinook, steelhead, and bull trout are present in the nearby Lemhi River, Wimpy Creek, and the North Fork Salmon River and would benefit from the project. There would be no negative effect to these species since all work would be conducted on dry land with no activity or impact in the rivers or creek.

6. Wetlands

Potential for Significance: No

Explanation: No wetlands are present at the project sites. There would be no effect.

7. Groundwater and Aquifers

Potential for Significance: No

Explanation: Fish screens have no potential to impact groundwater or aquifers. They do not withdraw water from either surface or groundwater sources. The operation of construction equipment activities may have a short-term potential to impact water quality slightly from possible fuel or other fluid drips or spills, but conservation measures from BPA's HIP ESA consultation would be applied that would prevent or minimize this potential.

8. Land Use and Specially-Designated Areas

Potential for Significance: No

Explanation: There would be no change to land uses. All fish screens would be constructed on private agricultural lands and are intended to support continued agricultural activities by protecting ESA-listed fish during delivery of irrigation water.

9. Visual Quality

Potential for Significance: No

Explanation: These new fish screens would be replacing existing fish screens, so there would be no long-term change to visual quality. There would be short-term scenery impacts from the presence of construction equipment and vegetation removal (until revegetation measures succeed in green-up).

10. Air Quality

Potential for Significance: No

Explanation: Driving of trucks and operation of construction equipment would produce emissions, but the amount would be minimal and short-term, and consistent with that produced by local agricultural activities.

11. Noise

Potential for Significance: No

Explanation: Noise sources would be from trucks and operation of construction equipment. Noise would be consistent with that produced by local agricultural activities and would be short-term. These impacts would occur during daylight hours during the late summer and fall months.

12. Human Health and Safety

Potential for Significance: No

Explanation: No long-term public safety hazards would be created with this project. Routine, short-term, safety hazards would be expected from the incremental addition of truck traffic on local roads, the operation of construction equipment, and the use of hand tools.

Evaluation of Other Integral Elements

The proposed project would also meet conditions that are integral elements of the categorical exclusion. The project would not:

Threaten a violation of applicable statutory, regulatory, or permit requirements for environment, safety, and health, or similar requirements of DOE or Executive Orders.

Explanation: N/A.

Require siting and construction or major expansion of waste storage, disposal, recovery, or treatment facilities (including incinerators) that are not otherwise categorically excluded.

Explanation: N/A.

Disturb hazardous substances, pollutants, contaminants, or CERCLA excluded petroleum and natural gas products that preexist in the environment such that there would be uncontrolled or unpermitted releases.

Explanation: N/A.

Involve genetically engineered organisms, synthetic biology, governmentally designated noxious weeds, or invasive species, unless the proposed activity would be contained or confined in a manner designed and operated to prevent unauthorized release into the environment and conducted in accordance with applicable requirements, such as those of the Department of Agriculture, the Environmental Protection Agency, and the National Institutes of Health.

Explanation: N/A.

Landowner Notification, Involvement, or Coordination

Description: Landowners and water users associated with the irrigation diversions at which these screens are located have already been informed by IDFG of these replacements. Construction would proceed following notification of, and in cooperation with, the affected landowners and irrigation water users.

Based on the foregoing, this proposed project does not have the potential to cause significant impacts to any environmentally sensitive resource.
