

### **McNary Paterson Tap 115kV Line L0405**

This project improves reliability of McNary – Badger Canyon #1 115kV Line to mitigate low voltage issues at the Paterson Tap and overload issues in the Richland area. The project also improves service to Benton PUD.

This will be accomplished by installing a new 115kV Bay at position 11 at McNary Substation and installation of new 115kV line segments to existing line, in order to allow the new Bay 11 to function as a selectable position for the Badger Canyon #1 115kV line.
