

Grand Coulee Cyclops Semi-Gantry Crane Replacement

The purpose of this project is to improve reliability and safety at Grand Coulee Dam by replacing Left Powerhouse and Right Powerhouse 14-ton Cyclops Semi-Gantry Cranes. The replacement of the two cranes includes associated components of the power delivery and control systems, runway rail and refurbish the existing concrete corbels. This project will allow Grand Coulee to continue to provide the required periodic maintenance of their hydro generation units. They will be used within a larger plan to rehabilitate or replace the ageing equipment of the Main Powerhouses at Grand Coulee Dam.
