

### **Lower Monumental Powerhouse Bridge Crane Wheel & Drive System Upgrade**

This project will upgrade the powerhouse bridge crane wheel and drive system and increase the reliability of the crane to perform lifting in the powerhouse for maintenance activities. The bridge crane is the only method available to perform necessary lifts associated with main unit overhauls and rehabilitation or routine maintenance of machinery in the powerhouse. Loss of the use of this crane could negatively affect power generation, return-to-service of fish priority units, and safe movement of large apparatus. Additionally, upgrades will increase worker safety while using the crane.
