Security Enhancement of the Keeler Substation

The BPA Physical Security Office recommends security upgrades at Keeler Substation to mirror current BPA security standards and requirements applied to all existing and new energized Facilities as determined by Transmission Services, Facilities and Workplace Services, and Office of Security and Continuity of Operations.

This standard is focused on improving the security posture at Keeler Substation by addressing the following:

1. Deter unauthorized personnel access to the site and controlled areas
2. Control and monitor physical access at all access points
3. Detect unauthorized access
4. Assess security-related alarms
5. Log and manage historical records of access
