Cc: Subject: [EXTERNAL] Post-2028 October 12th workshop (TRM vs Buy & Meld)

At the October 12th workshop after Daniel Fisher gave his presentation I verbally requested BPA to calculate cost shifts between customers under each CHWM reset scenario and across different levels of augmentation. There could be substantial cost shifts among those customers below their CHWM and those above under a reset of CHWM. I reiterate that request here and request deltas be compared to “status Quo” CHWM and current rates (i.e. PF Tier 1 around \$35/MWh and Tier 2 around \$60/MWh). Cost shift could be exacerbated even worst by rate design changes (i.e. those growing utilities that are paying high Demand charges due to peak load growth being shifted to below CHWM utilities). Thank you for consideration of this request.
