~~Attachment B— Determination of LDD Eligible Discount Percentage..... B-1~~

1 BACKGROUND AND PURPOSE

Chapter objectives: Describe legal and rate foundation for Tiered rates; affirm a two-year rate period.

Section 7(b)(1) of the Northwest Power Act requires BPA to establish a “rate or rates” for the sale of firm

electric power to meet the “general requirements” load of public body, cooperative, and federal agency customers (public customers, or “Publics”). 16 U.S.C. § 839e(b)(1). The public customers’ “general requirements” load is the electric power they purchase from the Administrator under Section 5(b) of the Northwest Power Act, excluding new large single loads. *Id.* at § 839e(b)(4).

This Public Rate Design Methodology (PRDM) is the rate methodology BPA will use beginning FY 2029-30 to develop the Section 7(b) rate for the general requirements of Publics with Contract High Water Mark (CHWM) Contracts. For purposes of the PRDM, the Section 7(b) rate, is referred to as the Priority Firm Power (PF) rate. Consistent with Section 7(b) and the rate design discretion afforded to the Administrator by Section 7(e) of the Northwest Power Act, the PF rate design, as described herein, will be composed of two tiers. The first tier (Tier 1 Rates) sets rates designed to recover the costs associated with serving a public customer’s general requirements load that is designated as Contract High Water Mark (CHWM) Load under the terms of the public customer’s CHWM Contract. The second tier (Tier 2 Rates) sets rates designed to recover the costs associated with serving a public customer’s general requirements load that is designated as Above-Contract High Water Mark (Above-CHWM) Load under the terms of the public customer’s CHWM Contract. The PRDM specifies how PF rates will be developed by BPA under these two tiers, with the objective of ensuring, to the maximum extent practical, that Tier 1 Rates do not include costs of serving a public customer’s Above-CHWM Load.

1 Other (not Core Rate Design) rate adjustments, charges, and special provisions, as well as
2 the rate design applicable to products and services not included in the PRDM, will be
3 established in each 7(i) Process.
4

5 **1.1 Two-Year Rate Periods**

6 BPA determinations of specific rate levels will be made in a manner consistent with the
7 PRDM in the respective 7(i) Process during the term of this PRDM. Under the PRDM, BPA
8 will set power rates for Rate Periods no longer than two years.
9

10 **1.2 Duration of the PRDM**

11 This PRDM will be effective October 1, 2028, and will apply until all contracts that sell
12 power at rates set pursuant to the PRDM have expired.
13

14 **1.3 Scope of PRDM References and Descriptions**

15 The PRDM addresses cost allocation and rate design of the PF rates applicable to the
16 general requirements of public customers taking service under a CHWM Contract. It does
17 not address the cost allocation or rate design of any other rate. Throughout the PRDM,
18 there are references to BPA's power costs in aggregate, or to elements of BPA's power costs
19 that are not recovered solely through the PF rates applicable to the PRDM. ~~The~~
20 ~~PRDM~~Section 2.2 states that all costs BPA functionalizes to power will be included in the
21 Revenue Requirement Table. ~~See Section 2.2.~~ Each line item on the Revenue Requirement
22 Table will be allocated to matching line items on the Allocated Tiered Cost Tables~~Table~~
23 ~~(Table 2-1)~~ established for each rate pool. The Cost Pools on the Allocated Tiered Cost
24 Table for the PF ~~Preference~~ rate pool will establish the treatment of costs to be recovered
25 through either the various Tier 1 Rates or the various Tier 2 Rates. These Cost Pools on the

1 Allocated Tiered Cost Table do not address BPA power costs on the Revenue Requirement
2 Table that are to be recovered through (allocated to) other rates, such as the New
3 Resources Firm Power (NR) rate or the Industrial Firm Power (IP) rate.

4
5 To the extent the PRDM refers to costs beyond those to be recovered through tiered PF
6 rates, this is not intended to imply that tiered PF rates will be designed to recover those
7 costs. Rather, these statements should be understood in the context of the sequential
8 process. That is, BPA will first determine its overall total system costs, then functionalize
9 those costs to Power Services and Transmission Services, and then allocate the total Power
10 system costs among its applicable rates (*e.g.*, PF, PF Exchange, IP, NR, FPS, others), in
11 accordance with the rate directives of Section 7 of the Northwest Power Act. The
12 provisions of the PRDM apply after this allocation, and only apply to the portion of costs
13 and revenues allocated to PF rate(s) receiving service under a CHWM Contract.

14 (See Figure 2-1.) The PRDM does not address issues relating to other BPA rates, except the
15 PF Exchange Rate for Publics with CHWM Contracts as described in Section 8.34.1.

2 COST ALLOCATIONS

~~Chapter objectives: Revise section on BPA Earned Interest Fund reflecting increasing disconnect between early contributions, current product makeup and switching, and simplification of internal systems and processes.~~

The PRDM specifies how costs will be allocated to the Tier 1 Cost Pools and the Tier 2 Cost Pools that are used to calculate the Tier 1 and Tier 2 Rates.

BPA will set all its rates, including the Tier 1 and Tier 2 Rates, in each 7(i) Process.

2.1 Cost Allocation Principles

The following principles were applied in developing the PRDM Cost Allocation Method and will be used for allocating costs that are not specifically addressed in the PRDM.

- 1) Tiering is a ratemaking construct implemented through an allocation of costs rather than an allocation of power.
- 2) Costs not otherwise expressly allocated in the PRDM will be allocated to Cost Pools based on the principles of cost causation, meaning the costs will be allocated to the Cost Pool(s) that benefit from or cause such costs.
- 3) Tier 1 Costs will be kept separate and distinct from Tier 2 Costs. Tier 1 Costs will be recovered through the Tier 1 Rates. Tier 2 Costs will be recovered through Tier 2 Rates, except when necessary to ensure BPA's cost recovery during a Rate Period or to conform to court ruling as provided for in Chapter 9.
- 4) Tier 2 Cost Pools will be kept separate from one another. Each Tier 2 Rate will recover only the costs of the applicable Tier 2 Cost Pool. BPA will seek to recover all costs of the applicable Tier 2 Cost Pool from customers purchasing power from that Tier 2 Cost Pool before proposing any reallocation of costs to the Composite Cost Pool.

- 1 5) Cost separation between the Cost Pools will not affect the operation or dispatch of
2 the ~~FCRPS~~Federal Columbia River Power System (FCRPS).
- 3 6) The ratemaking separation of costs between Tier 1 and Tier 2 Cost Pools, and
4 among the Tier 2 Cost Pools, will not necessarily be the same as BPA's accounting
5 treatment of the costs. When differences arise between ratemaking and accounting,
6 the ratemaking allocations determined in accordance with this chapter will govern
7 BPA's ratemaking.
- 8 7) BPA's allocation of costs among the Composite, Non-Slice, and Slice Cost Pools will
9 recognize the types of costs distinct to the type of service associated with each Cost
10 Pool.
- 11 8) The public customers have entered into a long-term CHWM Contract with BPA,
12 which commits the public customer to purchase (and BPA to supply) electric power
13 for the duration of the contract (as described therein) at rates that recover BPA's
14 total system costs consistent with Section 7 of the Northwest Power Act. ~~In view~~
15 ~~of~~As partial consideration for this long-term commitment, and ~~potential future~~the
16 long-term commitments in the CHWM Contract incorporating the PRDM, the
17 revenues and costs associated with the sales of secondary energy will be treated in a
18 ~~manner that recognizes BPA's long-standing treatment of these revenues.~~
19 Specifically the following manner:
- 20 a) all revenues forecast by BPA from its sale of secondary energy produced by
21 the Federal Base System and other resources acquired by the Administrator
22 will continue to be credited to power rates pursuant to Northwest Power Act
23 Section 7(g) against costs that are properly allocated to rates for recovery
24 from sales of power for use within the region; and

1 b) costs and benefits of the sale of or inability to sell excess electric power
2 allocated under Section 7(g) of the Northwest Power Act will be allocated to
3 the Cost Pools to which the costs of the resources that generate such excess
4 electric power are allocated, consistent with Section 7 of the Northwest
5 Power Act.

6 9) The tiered rate treatment described in this PRDM will preserve consistency with
7 generally accepted ratemaking principles.

8 10) The allocation of costs and revenues as described in the PRDM does not
9 prescribe any particular conveyance of environmental and/or other attributes
10 associated with power purchased from BPA.

11

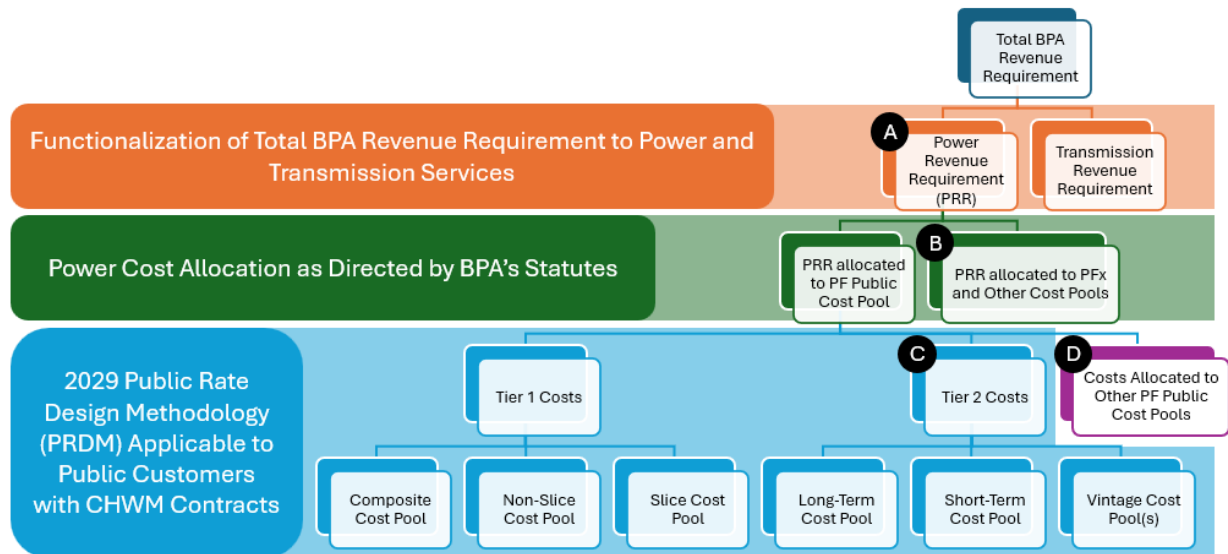

12 **2.2 Cost Allocation Method and Allocated Tiered Cost**

13 In each 7(i) Process under the PRDM, BPA will allocate Tier 1 Costs among three Tier 1
14 Cost Pools for determining Tier 1 Rates, and Tier 2 Costs to one or more Tier 2 Cost Pools
15 corresponding to each Tier 2 Rate Alternative. The Tier 1 Cost Pools are the Composite
16 Cost Pool, Slice Cost Pool, and Non-Slice Cost Pool. The allocation of costs to Cost Pools is a
17 ratemaking exercise that is performed in a 7(i) Process according to the directives in
18 Section 7 of the Northwest Power Act.

19
20 The Tier 1 Cost Pools will be determined by starting with the Revenue Requirement
21 functionalized to Power and subtracting the portion of that Revenue Requirement
22 recovered from BPA's other power rates, as directed by BPA's statutes. The remaining
23 Revenue Requirement will be recovered from the PF Public Cost Pool.
24

1 The portion of the PF Public Cost Pool that is allocated to the Tier 2 Cost Pools, as well as
 2 any portion of the PF Public Cost Pool allocated to non-CHWM PF Public Customers, will
 3 then be subtracted from the PF Public Cost Pool. The remaining portion of the PF Public
 4 Cost Pool will be allocated to Tier 1 Cost Pools. The Tier 1 Costs are then sub-allocated to
 5 the three Tier 1 Cost Pools—the Composite Cost Pool, the Slice Cost Pool, and the Non-Slice
 6 Cost Pool. (See Figure 2-1 below.)

7
 8 **Figure 2-1.**
 9 **Soup-to-Nuts Power Cost Allocation**

10
 11
 12 Consistent with Figure 2-1 above, BPA's Tier 1 Costs are calculated as:

13
 14
$$\text{Tier 1 Costs} = A - B - C - D$$

15 Where:

16 A = The portion of BPA's total Revenue Requirement functionalized to Power
 17 Services.

1 B = The portion of Power Services' Revenue Requirement allocated to BPA's
2 other Cost Pools as directed by BPA's Statutes.

3 C = The portion of the PF Public Cost Pool identified as Tier 2 Costs.

4 D = The portion of the PF Public Cost Pool allocated to other non-CHWM PF
5 Public Customers.

7 **2.2.1 Cost Allocation Proof**

8 The mathematical, illustrative, summarizing, and accounting methods used to solve for
9 Tier 1 and Tier 2 Rates in each 7(i) Process may vary. Therefore, to ensure that the
10 PF Public rates are set in accordance with Section 7 of the Northwest Power Act and the
11 Principles in Section 2.1 of this ~~Chapter~~chapter, BPA will conduct a cost allocation proof in
12 every 7(i) Process. The proof will verify that the total costs recovered from all PF Public
13 rates is equal to only the portion of BPA's total power costs that, in accordance with Section
14 7 of the Northwest Power Act, are to be recovered from PF Public rates.

16 **2.2.1.1 The Composite Cost Pool**

17 Section A of the Allocated Tiered Cost Table 2-1 sets out the categories of costs that are
18 allocated to the Composite Cost Pool, including all Tier 1 Costs and Tier 1 Credits
19 functionalized by BPA to Power, except for any Tier 1 Costs or Tier 1 Credits that BPA has
20 determined meet the specified criteria for inclusion in either the Slice Cost Pool or the Non-
21 Slice Cost Pool, as set forth in Sections 2.2.~~31~~2 and 2.2.~~31~~3. The administrative costs
22 (primarily staffing costs) of surplus marketing and administering all CHWM Contracts and
23 rates, including potential future contracts that are applicable to the PRDM, will be allocated
24 to the Composite Cost Pool.

1 **2.2.1.2 The Slice Cost Pool**

2 Section B of the Allocated Tiered Cost Table is designed to include the costs that are
3 allocated to the Slice Cost Pool, including all Tier 1 Costs and Tier 1 Credits that are
4 specifically and uniquely attributable to the Slice ~~product~~Product. If, during the term of
5 CHWM Contracts (including potential future contracts ~~applicable to that~~ incorporate the
6 PRDM), BPA undertakes actions that are specifically and uniquely attributable to the Slice
7 Product (for example, customer-requested software enhancements specific to the Slice
8 Product), then BPA will allocate the costs of undertaking these actions to the Slice Cost Pool
9 unless BPA and the Slice customers have made separate payment arrangements. Such
10 costs would be treated as New Expenses under the PRDM for allocation purposes.
11 Similarly, if in the future there are New Credits attributable to the Slice Product only, these
12 New Credits would be allocated to the Slice Cost Pool.

13
14 **2.2.1.3 The Non-Slice Cost Pool**

15 Section C of the Allocated Tiered Cost Table sets out the categories of costs that are
16 allocated to the Non-Slice Cost Pool, including all Tier 1 Costs and Tier 1 Credits that are
17 specifically and uniquely attributable to the Load Following or Block Products. The Non-
18 Slice Cost Pool includes the costs and credits of converting resource output into load
19 service (e.g., Balancing Power Purchases); the costs of Tier 1 risk mitigation not recovered
20 through rates for the Slice Product; and the costs or credits arising from Tier 1 Non-Slice
21 ~~Tier 1~~ capacity acquisitions, ~~(see Section 3.5. The).~~ Except as otherwise provided in
22 Section 2.4, the Non-Slice Cost Pool also includes the Tier 1 Secondary Energy Credit, which
23 includes any costs or credits specifically attributable to BPA’s marketing of Tier 1
24 Secondary Energy and excludes administrative costs allocated to the Composite Cost Pool.

1 **2.2.1.4 Tier 2 Cost Pools**

2 Section D of the Allocated Tiered Cost Table sets out the costs that are allocated to the
3 Tier 2 Cost Pools. Such costs include all Tier 2 Costs that are attributable to resources and
4 services that BPA forecasts for ratemaking purposes to use for serving load at a Tier 2 Rate.
5 Included in Table 2-1, Section D, are RSS Support Services costs used to set the Tier 2 Rates.
6 BPA will include a uniform adder, the Overhead Cost Adder, in the Tier 2 Cost Pools. BPA
7 will credit the forecast revenue from the Overhead Cost Adder to the Composite Cost Pool.
8 See Section 5.2 for a fuller discussion of costs allocated to Tier 2 Cost Pools and
9 Section 5.2.3 for discussion of the Overhead Cost Adder. Any uses of Tier 1 System
10 Resources to serve load at a Tier 2 Rate, as forecast for ratemaking purposes, will be priced
11 in accordance with Chapter 5.

12
13 **2.2.2 Allocated Tiered Cost Table**

14 The Allocated Tiered Cost Table, Table 2-1 sets out the cost categories that will be used for
15 allocating costs in each 7(i) Process. Any changes to the Allocated Tiered Cost Table to
16 accommodate New Expenses or New Credits will be made pursuant to Section 2.3. Any
17 changes to the Allocated Tiered Cost Table to accommodate a need to allocate a Tier 2 Cost
18 to a Tier 1 Cost Pool will be pursuant to Section 2.6. All other changes to the Allocated
19 Tiered Cost Table will be pursuant to Chapter 9. The addition of new Tier 2 Cost Pools will
20 not be considered a change to the Allocated Tiered Cost Table for purposes of Chapter 9.

21
22 BPA will conform the description or grouping of costs in the Allocated Tiered Cost
23 Table 2-1 to the grouping of costs in the Power Services Statement of Revenues and
24 Expenses, but changes to line-item descriptions or groupings in the Power Services
25 Statement of Revenues and Expenses will not change the Cost Pools to which the
26 underlying costs are assigned. If modifications to BPA's Power Services Statement of

1 Revenues and Expenses change the categorization of costs, then the manner of maintaining
2 the separation of costs for purposes of the PRDM will be addressed in the next 7(i) Process
3 following the modification. Such modifications will not change the underlying allocation of
4 costs to the respective Cost Pools, which form the basis for setting Tier 1 and Tier 2 Rates.
5

6 **2.3 Inclusion of New Expenses or New Credits**

7 BPA will allocate New Expenses or New Credits to the Cost Pools based on the cost
8 allocation principles in Section 2.1. BPA will propose an allocation of the New Expenses
9 and New Credits to the appropriate Cost Pools in a 7(i) Process.
10

11 **2.4 Tier 1 Secondary Energy Credit**

12 The Slice Product includes an advance sale of surplus energy, which is delivered when and
13 if available. ~~As a consequence~~Consequently, the Composite Cost Pool and Slice Cost Pool do
14 not contain any cost or credit, except administrative costs, associated with Tier 1
15 Secondary Energy. When Load Following and Block Products do not receive Tier 1
16 Secondary Energy as an advance sale of surplus energy, the Non-Slice Cost Pool will be
17 allocated a Tier 1 Secondary Energy Credit. Such Tier 1 Secondary Energy Credit can take
18 the form of a fixed credit based on forecast, a variable credit based on actuals, or a
19 combination of the two. Notwithstanding any other provision in this PRDM, and
20 irrespective of whether BPA allocates Section 7(b)(2) trigger amounts to BPA surplus sales,
21 BPA will seek to ensure comparable treatment with respect to Tier 1 Secondary Energy as
22 between the Slice and Non-Slice Cost Pools.
23

24 Tier 1 Secondary Energy Credit associated with the Unused CHWM will be included in the
25 Composite Cost Pool rather than the Non-Slice Cost Pool. BPA may also propose in a 7(i)

1 Process that portions of the Tier 1 Secondary Energy Credit be reallocated to Composite
2 Cost Pool as supported by Section 2.1, such as when a market, ~~operational~~operations, or
3 other decision causes a portion of the advanced sale of secondary energy associated with
4 the Slice Product to otherwise be credited to the Non-Slice Cost Pool or when a condition
5 exists that causes revenue to be allocated to the Non-Slice Cost Pool when a reallocation to
6 the Composite Cost Pool would be more appropriate.
7

8 **2.5 Interest Earned on the Bonneville Fund**

9 BPA will allocate to the Non-Slice Cost Pool a credit equal to the total anticipated credit
10 earned on Bonneville Fund balances attributed to the Power function.
11

12 **2.6 BPA Actions Prior to Allocating Tier 2 Cost to a Tier 1 Cost Pool**

13 If, for purposes of ensuring cost recovery, BPA determines that it must reallocate to any
14 Tier 1 Cost Pool costs that would otherwise be allocated to any Tier 2 Cost Pool under the
15 PRDM, to the extent practicable, BPA will reallocate such costs only after taking the
16 following actions:

- 17 1) BPA will make reasonable efforts to recover the costs from the party(s) that would
18 otherwise be responsible for such costs. Such efforts may include making demand
19 on any available credit support and pursuing legal action when BPA determines it is
20 appropriate.
- 21 2) BPA will make good faith efforts to reduce the costs that are proposed to be
22 reallocated, so as to offset the cost that would otherwise occasion the need for a
23 reallocation to ensure cost recovery.
- 24 3) Prior to a BPA proposal in a 7(i) Process to reallocate costs from a Tier 2 Cost Pool
25 to the Composite~~any~~ Tier 1 Cost Pool, BPA will convene a public meeting with

1 customers and interested parties to discuss the proposal and to elicit alternatives to
2 reallocating the costs. If an alternative cost recovery mechanism appears to be
3 viable, BPA would propose such an alternative cost recovery mechanism in the next
4 7(i) Process.

5 4) If BPA determines in a 7(i) Process that it must reallocate costs to a Tier 1 Cost Pool
6 that would otherwise be allocated to any Tier 2 Cost Pool, the presumption will be
7 that such costs are to be allocated to the Composite Cost Pool unless it is determined
8 in the 7(i) Process that the costs should be allocated to another Tier 1 Cost Pool
9 based on the allocation principles in Section 2.1.

10
11 These actions, or disputes over whether the Administrator has satisfied them, do not
12 override and will not be allowed to frustrate the Administrator's responsibility to recover
13 costs and timely repay the U.S. Treasury.

14 15 **2.7 Slice True-Up**

16 Slice customers will have an annual Slice True-Up Charge for costs and credits allocated to
17 the Composite Cost Pool (*see* Table 2, Section A) and to the Slice Cost Pool (*see* Table 2,
18 Section B). The annual Slice True-Up Charge will be calculated for each Fiscal Year as soon
19 as BPA's audited actual financial data are available (usually in November). Actual expenses
20 during a Fiscal Year to implement a request of and for the benefit of an individual Slice
21 customer will be billed and paid in accordance with the contract governing the
22 implementation of such request.

23
24 The Slice True-Up Charge for each customer will be the sum of the Composite Cost Pool
25 True-Up Charge and the Slice Cost Pool True-Up Charge calculated for each Slice customer.
26 BPA will provide Slice customers a preliminary estimate of the Slice True-Up Charge before

1 completion of BPA's financial audit for each Fiscal Year. BPA will notify Slice customers of
2 their Slice True-Up Charge that is calculated after audited actual financial data are
3 available. ~~Composite Cost Pool~~The Slice True-Up Charge is included in customer bills in the
4 month (or months) following notification.

5
6 The Composite Cost Pool True-Up Charge and the Slice Cost Pool True-Up will be added
7 together if both are negative or both are positive, and will be netted against each other if
8 one adjustment is positive (adjustment is a charge) and the other adjustment is negative
9 (adjustment is a credit). The result of this summing or netting, as applicable, will be the
10 final Slice True-Up Charge.

11 12 **2.8 Slice True-Up Composite Cost Pool Charge**

13 The Slice True-Up Composite Cost Pool Charge is applicable to the Slice Product. The Slice
14 True-Up Composite Cost Pool True-Up Charge can be either positive or negative and is
15 calculated as the Slice True-Up Composite Cost Pool ~~Slice True-Up~~ Billing Determinant
16 multiplied by the Slice True-Up Composite Cost Pool ~~Slice True-Up~~ Rate.

17 18 **2.7.12.8.1 Slice True-Up Composite Cost Pool ~~Slice True-Up~~ Billing Determinant**

19 For each Slice customer, the annual Slice True-Up Composite Cost Pool Billing Determinant
20 ~~for the Composite Cost Pool~~ will be calculated as:

$$21$$
$$22 \quad STU_{comp_{BD}} = Slice\% * \left(\sum CHWM - \text{Unused}CHWM \right)$$

23 Where:

24 $STU_{comp_{BD}}$ = A Slice customer's annual Slice True-Up Composite Cost Pool
25 ~~Slice True-Up billing determinant~~ Billing Determinant in kWh applicable

1 to the Slice True-Up Composite Cost Pool True-Up Rate in mills/kWh in a
2 Fiscal Year

3 $Slice\%$ = A customer's Slice percentage in that Fiscal Year

4 $\sum CHWM$ = sum of all customer CHWMs in that Fiscal Year

5 UnusedCHWM = The UCHWM = the actual Unused CHWM for a Fiscal Year as
6 adjusted for actual loads effectively served at Tier 1 rates

8 2.7.22.8.2 Slice True-Up Composite Cost Pool Slice True-Up Rate

9 The Slice True-Up Composite Cost Pool Slice True-Up Rate is calculated by subtracting (i)
10 the forecast annual expenses and revenue credits allocated to the Composite Cost Pool for
11 the applicable Fiscal Years of the Rate Period from (ii) the actual expenses and revenue
12 credits in the applicable Fiscal Year of the Rate Period that are allocable to the Composite
13 Cost Pool. ~~That~~This difference ~~will~~is then ~~be~~ divided by the total amount of actual Tier 1
14 MWhs sold in the same Fiscal Year at ~~PF~~ Tier 1 rates, as adjusted by the Tier 1 Marginal
15 Energy True-Up, to calculate the mills/kWh Slice True-Up Composite Cost Pool Rate.

$$17 \quad STU_{comp_R} = \frac{(\cancel{CCP_{Actual}} - \cancel{CCP_{Forecast}})}{(\sum CHWM - \cancel{UnusedCHWM})} \frac{(CCP_{Actual} - CCP_{Forecast})}{(\sum CHWM - UCHWM)}$$

18 Where:

19 STU_{comp_R} = the Slice True-Up Composite Cost Pool Slice True-Up Rate in
20 mills/kWh applicable to a Slice customer's kWh Composite Cost Pool Slice
21 True-Up ~~billing determinant~~ Billing Determinant in a Fiscal Year

22 CCP_{Actual} = the actual expenses and revenue credits in the applicable Fiscal
23 Year of the Rate Period that are allocable to the Composite Cost Pool

1 $CCP_{Forecast}$ = the forecast annual expenses and revenue credits allocated to
2 the Composite Cost Pool for in the applicable Fiscal YearsYear of the Rate
3 Period allocated to the Composite Cost Pool

4 $\sum CHWM$ = sum of all customer CHWMs in that Fiscal Year

5 UnusedCHWM = TheUCHWM = the actual Unused CHWM for a Fiscal Year as
6 adjusted for actual loads effectively served at Tier 1 rates

7

8 **2.8.2.1 Treatment of Firm Surplus and Secondary Adjustment Line Item**

9 As part of the Slice True-Up Composite Cost Pool True-UpCharge, the Firm Surplus and
10 Secondary CreditAdjustment (from Unused Contract High Water Mark (CHWM)) line item
11 in Table 2-1 will be revised to reflect the actual effective Unused CHWM for each Fiscal
12 Year and the resulting revenue difference between a sale at the posted Slice True-Up
13 Composite CustomerCost Pool Rate and at the 7(i) Process-determined value of Unused
14 CHWM. The dollar amount calculated, which may be positive or negative, will be used to
15 adjust the forecast Firm Surplus and Secondary CreditAdjustment (from Unused Contract
16 High Water Mark (CHWM)) line item to calculate the actual Firm Surplus and Secondary
17 CreditAdjustment (from Unused Contract High Water Mark (CHWM)) line item used in to
18 calculate the Composite Cost Pool Slice True-Up Rate.

19

20 **2.8.2.2 Treatment of Other Revenue Credit Line Items**

21 As part of the Composite Cost Pool True-Up, some rate revenue creditscredit line items in
22 Table 2-1, such as IP and NR revenue line items, may be subject to true-up as determined in
23 each 7(i) Process. When a revenue credit line item is subject to true-up that varies because
24 the actual amount of power sold is different than the forecast amount of power sold, the
25 forecast revenue credit will be adjusted to account for the revenue difference assuming an

1 increased or decreased market power sale—such as a kWh decrease in a NR power sale
2 and an equal kWh increase in a market power sale, or vice versa. The revenue difference
3 calculated, using the formula established in each 7(i) Process, which may be positive or
4 negative, will be used to adjust the forecast revenue credit line items to calculate the actual
5 revenue credit line items used in to calculate the Composite Cost Pool Slice True-Up Rate.

7 **2.8.2.3 Minimum Required Net Revenue Line Items**

8 The actual expenses and revenue credits allocable to the Composite Cost Pool ~~will~~ include a
9 component for ~~the any~~ amount ~~in a Fiscal Year~~ by which BPA's actual cash requirements
10 exceed the total actual non-cash expenses in the Composite Cost Pool. in a given Fiscal
11 Year. This is called the Minimum Required Net Revenue (MRNR). When BPA's actual cash
12 requirements do not exceed the total actual non-cash expenses in the Composite Cost Pool,
13 MRNR will equal zero. Any revisions to this MRNR treatment will be proposed by BPA in a
14 7(i) Process.

16 ~~2.7.3~~ **2.8.3 Slice True-Up Slice Cost Pool True-Up Charge**

17 The annual Slice True-Up Slice Cost Pool Charge for the Slice Cost Pool will be calculated by
18 1) subtracting (i) the forecast annual expenses and revenue credits allocated to the Slice
19 Cost Pool for the applicable Fiscal Years of the Rate Period from (ii) the actual expenses and
20 revenue credits that are allocable to the Slice Cost Pool in the applicable Fiscal Year of the
21 Rate Period and 2) multiplying the difference from step 1 above by each customer's Slice
22 Percentage pursuant to Exhibit K (or its replacement) of the Slice Contract divided by the
23 sum of all Slice Percentages for that Fiscal Year pursuant to Exhibit ~~K~~ K (or its replacement)
24 of the Slice Contract. The dollar amount calculated, which may be positive or negative,
25 constitutes the Slice True-Up Slice Cost Pool Charge for the Slice Cost Pool.

1 **2.7.4.2.8.4 Treatment of New Costs and New Credits, and Costs and Revenues Not**
2 **Subject to Slice True-Up**

3 In the annual Slice True-Up Charge, BPA may make an interim allocation of New Expenses
4 or New Credits for which categories do not exist on Table 2-1. If BPA makes such an
5 interim allocation among the Cost Pools, it will do so based on the PRDM cost allocation
6 principles (see Section 2.1). BPA will make a final decision on the allocation of New
7 Expenses or New Credits among the Cost Pools in the next scheduled power rate 7(i)
8 Process. If the cost allocation finally adopted in the 7(i) Process is different from the
9 interim allocation implemented by BPA through the Slice True-Up Charge, the Slice
10 customers will be compensated or charged based on their over-payment or under-
11 payment, in either case with interest (at the rate specified in the Slice customer's CHWM
12 Contract) from the first calendar day of the Fiscal Year in which the Slice True-Up Charge
13 containing the interim allocation was calculated to the due date of the bills containing
14 payment(s) or credit(s) related to the final allocation.

15
16 For forecast expenses or revenue credits allocated to either the Composite Cost Pool or the
17 Slice Cost Pool that are not subject to the Slice True-Up Charge, for purposes of all Slice
18 True-Up Charge calculations the actual expenses and revenue credits allocable to such Cost
19 Pools for each Fiscal Year will be deemed to be equal to the forecast of such expenses or
20 revenue credits in the applicable 7(i) Process. The expenses and revenue credits that are
21 not subject to true-up to actual expenses and revenue credits in the Slice True-Up Charge
22 will be determined in each 7(i) Process.

23
24 **2.7.5.2.8.5 Slice True-Up Charge Settlement**

25 ~~BPA will provide Slice customers a preliminary estimate of the Slice True-Up Charge before~~
26 ~~completion of BPA's financial audit for each Fiscal Year. The Slice True-Up Charge for each~~

1 ~~customer will be the sum of the Composite Cost Pool True-Up Charge and the Slice Cost~~
2 ~~Pool True-Up Charge calculated for each Slice customer. BPA will notify Slice customers of~~
3 ~~their Slice True-Up Charge that is calculated after audited actual financial data are~~
4 ~~available. The Slice True-Up Charge are included in customer bills in the month (or~~
5 ~~months) following notification.~~

6
7 ~~The Composite Cost Pool True-Up Charge and the Slice Cost Pool True-Up will be added~~
8 ~~together if both are negative or both are positive, and will be netted against each other if~~
9 ~~one adjustment is positive (adjustment is a charge) and the other adjustment is negative~~
10 ~~(adjustment is a credit). The result of this summing or netting, as applicable, will be the~~
11 ~~final Slice True-Up Charge.~~

12
13 The final Slice True-Up Charge for each customer will be applied either as a one-month
14 credit (if the adjustment is negative) or as a three-month charge (if the adjustment is
15 positive) spread equally across the three months following the month the final Slice True-
16 Up Charge is determined by BPA. Slice customers have the option to pay the entire charge
17 in one month.

18
19 Interest will be computed and added to the Slice True-Up Charge for each Slice customer at
20 the rate and for the period specified in the Slice customer's CHWM Contract.

21
22 Any adjustments to the billed Slice True-Up Charge will be determined by BPA upon the
23 later to occur of 1) BPA's issuance of its written final resolutions of Slice True-Up Charge
24 issues at conclusion of the Cost Verification Process or 2) BPA's issuance of a written
25 decision by the Administrator that affirms or rejects (in whole or in part) the
26 recommendation of the third-party expert, all as set forth in [Attachment A Appendix B](#).

1 **2.7.62.8.6 Cost Verification Process for the Slice True-Up Charge**

2 BPA will conduct a Cost Verification Process that will permit Slice customers and other
3 customers to assess whether BPA has correctly calculated the amount of each expense or
4 revenue credit subject to the Slice True-Up Charge, and whether the final Slice True-Up
5 Charge contains only those expenses and revenue credits permitted to be included in—and
6 does not contain any expenses or revenue credits excluded from—the Slice Rate pursuant
7 to the PRDM. The Cost Verification Process will not enable customers to question or
8 dispute BPA’s accounting policies and standards, management decisions, or other policies.
9 The Cost Verification Process for the Slice True-Up Charge will be conducted in accordance
10 with Attachment A Appendix B to this PRDM.

11
12 **2.82.9 Cost Review Public Process**

13 BPA will conduct, outside the PRDM, a Cost Review Public Process. This public process will
14 include periodic meetings to allow customers and interested parties to review and obtain
15 information from BPA, such as BPA’s financial performance, comparison of BPA’s actual
16 costs to its forecast costs, and assignment of costs among cost categories and Cost Pools.
17 For any issues raised in this Cost Review Public Process, BPA will determine if resolution is
18 needed in a 7(i) Process.

3 RESOURCES AND AUGMENTATION

~~Chapter objectives: Describe and establish the federal resources that will be used in the calculation of the size of resources (existing and augmentation resources) to serve Tier 1 loads, for purpose of firm output, cost allocation, and Slice product, in the 7(i) rates process.~~

This chapter describes how BPA will identify the resources whose costs will be recovered through Tier 1 rates as established in each 7(i) Process.

6 This chapter also identifies types of

7 augmentation, and the cost allocation and rate treatment applicable to each type of
8 augmentation. Lastly, this chapter specifies how BPA will track various types of resource
9 acquisitions.

10

11 3.1 Tier 1 System Resources

12 In each 7(i) Process, BPA will update the list of resources that are considered Tier 1 System
13 Resources for setting the Tier 1 rates and establishing the amount of firm power provided
14 through the Slice ~~product~~Product. Tier 1 System Resources are the resources listed in
15 Table 3-1, Tier 1 System Resources, as updated for any new resources, including market
16 purchases, that BPA determines are needed to meet its CHWM obligations. The firm power
17 of ~~these resources~~the Tier 1 System Resources will be determined in each 7(i) Process and
18 is defined as the Tier 1 Firm System Output.

19

20 ~~3.2 System Obligations~~

21 ~~3.2.1 Designated System Obligations~~

22 The resources listed in Table 3-1 will not be removed, and the Portion of Resource will not
23 be decreased, for the duration of this PRDM. If there is a cessation of firm power from any
24 such resource, the firm power output from the resource will be set to zero as determined in
25 the 7(i) Process. The firm power from a given Tier 1 System Resource may change over

1 time as determined in each 7(i) Process. The output for each resource and Portion of
2 Resource listed in Table 3-1 so determined will be included in the Tier 1 Firm System
3 Output used to determine whether any new resources, including market purchases, must
4 be added to Table 3-1 for BPA to meet its CHWM obligations. BPA will only add new
5 resources, including market purchases, to the resources listed in Table 3-1 to the extent
6 BPA determines that it is necessary to meet BPA's CHWM obligations after accounting for
7 the Tier 1 Firm System Output of the then existing Tier 1 System Resources and BPA's
8 Designated System Obligations. Unlike Tier 1 System Resources, resources listed in Tables
9 3-3, 3-4, and 3-5 will include a purpose and that purpose can be changed as determined in
10 a 7(i) Process.

12 3.2 System Obligations

13 3.2.1 Designated System Obligations

14 Designated System Obligations, as listed in Table 3-2, Designated System Obligations, are
15 BPA obligations that: 1) are directly assigned to, or from, the generation output or
16 capability of the Tier 1 System Resources, or 2) are incurred because of contracts,
17 operational obligations, memorandums of agreement, treaties, statutes, regulations, court
18 orders, or executive orders, as individual obligations or in combination, that create a firm
19 obligation for the Tier 1 System Resources. Designated System Obligations also
20 ~~includes~~include the portion ~~of~~(if any) of the Tier 1 System Resources that BPA uses to
21 source generation inputs for BPA's ancillary and control area service obligations ~~that are~~
22 provided from the Tier 1 System Resources, transmission losses, capacity for the Western
23 Resource Adequacy Program (WRAP) (or its successor), Support Services, or other reserve
24 obligations. These obligations are considered firm obligations of the system regardless of

1 weather, water, or economic conditions. These obligations may involve energy, capacity, or
2 a combination of the two.

3
4 Designated System Obligations can vary from year to year and change over time. Any costs
5 related to, or revenues recovered from, Designated System Obligations will be allocated to
6 the Composite Cost Pool.

7
8 Designated System Obligations may continue where a successor contract replaces an
9 expiring listed contract. The Designated System Obligations listed on Table 3-2 will not be
10 removed for the duration of this PRDM. If there is a cessation of any such Designated
11 System Obligation, the obligation amount will be set to zero when the obligation expires.
12 Table 3-2 may be updated to include new Designated System Obligations.

14 **3.2.2 New Designated System Obligations**

15 Customers with CHWM Contracts should have as much certainty as reasonably possible
16 about Designated System Obligations. Accordingly, BPA will, if practicable, hold a public
17 process before ~~entering into~~adopting a new Designated System Obligation. Where holding
18 such a process is not practicable before ~~entering into or becoming subject to~~adopting a new
19 Designated System Obligation, BPA will hold such process before a new Designated System
20 Obligation is added to Table 3-2 and will document any change in the next applicable 7(i)
21 Process.

23 **3.2.3 Large Designated System Obligation Increases**

24 If BPA forecasts a 10 percent or greater increase in total Designated System Obligations
25 over the most recently published forecast of Designated System Obligations, then BPA shall

1 notify all customers with CHWM Contracts of such change as soon as practical. Upon
2 written request of not less than 25 percent of the customers with CHWM Contracts (by
3 number), BPA will hold a public process on the matter.

4
5 In such a public process, BPA will hold at least one open meeting to: 1) in the case of new
6 Designated System obligations, review the need and the forecast amount of such obligation;
7 and 2) in the case of existing Designated System Obligations, review BPA's forecast of the
8 obligation amounts. BPA will consider written comments submitted in connection with
9 such meeting(s). BPA will respond to reasonable requests to provide information that is
10 non-confidential and is reasonably related to BPA's determination of new and existing
11 Designated System Obligations and the forecast obligation amounts. Issues related to cost
12 allocation, rate impacts, or rate treatment of changes to Designated System Obligations will
13 not be addressed in such process, but rather in the appropriate 7(i) Process.

14 15 **3.3 Augmentation**

16 There are two types of augmentation used for purposes of this PRDM: CHWM Modeled
17 Augmentation and Rate Period Augmentation.

18 19 **3.3.1 CHWM Modeled Augmentation**

20 ~~CHWM Modeled Augmentation is not a forecast of physical resources needed for load-~~
21 ~~resource balance.~~ CHWM Modeled Augmentation is a PRDM construct used to establish the
22 CHWM System, the simulated Slice capability, and to equitably allocate costs between Slice
23 and Non-Slice rates. CHWM Modeled Augmentation is not a forecast of physical resources
24 needed for load-resource balance. CHWM Modeled Augmentation is greater than zero
25 when the Tier 1 Firm System Output reduced for sum of customer annual CHWMs and the

1 Designated System Obligations is ~~less~~greater than the ~~sum of customer CHWMs~~Tier 1 Firm
2 System Output.

$$4 \quad CHWM \text{ Modeled Augmentation} = \text{Max}(0, \sum CHWM_{all} + DSO - T1FSO)$$

5 where:

6 $\sum CHWM_{all}$ = annual sum of CHWMs for all customers

7 ~~T1FSO = Tier 1 Firm System Output~~

8 DSO = Designated System Obligations

9 $\sum CHWM_{all}$ = sum of CHWMs for all customers

10
11 T1FSO = Tier 1 Firm System Output

12
13 CHWM Modeled Augmentation is an annual average modeled amount of power needed to
14 meet the sum of customer CHWMs and the Designated System Obligations with the Tier 1
15 System Resources ~~after meeting Designated System Obligations~~. Any Unused CHWM will
16 be used to offset the CHWM Modeled Augmentation. That is, CHWM Modeled
17 Augmentation offset by Unused CHWM will reduce the Unused CHWM amount debited
18 from the Non-Slice Cost Pool and credited to the Composite Cost Pool. CHWM
19 Augmentation will be included as an annual flat block of power for calculating the
20 simulated Slice capability and the portion of a customer's Net Requirement met with the
21 Slice ~~product~~Product.

23 **3.3.2 Rate Period Augmentation**

24 Rate Period Augmentation is the forecast annual average ~~annual~~ amount of power needed
25 to be in load and resource balance after considering all of BPA's resources (see Tables 3-1,

1 3-3, 3-4, and 3-5 ~~below~~) and obligations (*e.g.*, Designated System Obligations, power
2 needed to serve loads under ~~section~~Section 5 of the Northwest Power Act). The cost of
3 Rate Period Augmentation will be based on the expected cost of a flat annual block of
4 power determined in each 7(i) Process for the applicable Fiscal Year and allocated to the
5 Composite Cost Pool. The forecast costs of augmentation may be subject to the Slice True-
6 Up as determined in each 7(i) Process.

8 **3.4 Balancing Power Purchases**

9 In each 7(i) Process, BPA will forecast its Balancing Power Purchase costs. Balancing
10 Power Purchases are distinct from Rate Period Augmentation in that they are power
11 purchases or resource acquisitions forecast by BPA in a 7(i) Process to be made by BPA for
12 periods within a year during which BPA's resource capability is insufficient to meet BPA's
13 obligations for that period. Such Balancing Power Purchases will not be included when
14 calculating Rate Period Augmentation. BPA's Balancing Power Purchase costs may include
15 procured contract purchases as well as a forecast of future procurements. The cost of
16 BPA's Balancing Power Purchases will be allocated to the Non-Slice Cost Pool. The
17 Composite Cost Pool may include a debit with an equal and opposite credit to the Non-Slice
18 Cost Pool to account for any Balancing Power Purchase costs associated with rates other
19 than Tier 1 Non-Slice rates. For example, such a Composite to Non-Slice Cost Pool
20 adjustment would be needed if NR-rate-related Balancing Power Purchase costs are being
21 allocated to the Non-Slice Cost Pool when NR rate revenue is allocated to the Composite
22 Cost Pool. Any such adjustment would be established through the 7(i) Process.

1 **3.5 Tier 1 Non-Slice Capacity Acquisitions**

2 BPA may make capacity resource acquisitions for meeting its Tier 1 Non-Slice load
3 obligations. To the extent BPA makes these type of resource acquisitions, it will list these
4 resources in Table 3-3 as updated each 7(i) Process. The cost of Tier 1 Non-Slice Capacity
5 Acquisitions will be allocated to the Non-Slice Cost Pool.
6

7 **3.6 Tier 2 Acquisitions**

8 BPA may make resource acquisitions (energy, capacity or a combination of both) for
9 purposes of meeting its ~~PF load~~Tier 2 Load obligations ~~served at Tier 2 rates.~~ To the extent
10 BPA makes these type of resource acquisitions, it will list these ~~resources~~Tier 2
11 Acquisitions in Table 3-4 with a note regarding the resource’s originally purchased
12 purpose, *e.g.*, to serve loads under a specific Tier 2 Rate Alternative. Table 3-4 will be
13 updated each 7(i) Process. The cost of Tier 2 Acquisitions will be allocated to the
14 applicable Tier 2 Cost Pool.
15

16 **3.7 All Other Resource Acquisitions**

17 BPA may make resource acquisitions (energy, capacity or a combination of both) for
18 purposes other than to meet its PF load obligations served at Tier 1 and Tier 2 rates. All
19 Other Resource Acquisitions will be listed in Table 3-5 with a note regarding the resource’s
20 originally purchased purpose, *e.g.*, to serve loads at NR rates. To the extent a resource is
21 originally intended to be used for multiple purposes, the resources will be listed multiple
22 times with each specific purpose and portion included. This may result in the same
23 resource being listed in ~~Table~~Tables 3-1, ~~Table~~ 3-3, ~~Table~~and 3-4, and multiple times in
24 Table 3-5. Consistent with the statutory functionalization and allocations depicted in
25 Figure 2-1, any costs related to All Other Resource Acquisitions, ~~or~~ and revenues recovered

1 as a result of making All Other Resource Acquisitions, will be allocated to the Composite
 2 Cost Pool.

4 TIER 1 RATE DESIGN

Chapter objectives: This chapter is largely a re-write relative to TRM. These changes are driven by the overall Core Rate Design changes developed in the PRDM Public Process in 2024—with a few key changes: 1) a change in rate units and charge approach away from TOCA toward \$/MWh (mills/kWh) based charges; 2) clarified price signals through the application of an Energy, Demand, and Peak Load Variance Charges; 3) increased price signal for capacity through a larger demand billing determinant that sends price signals for LF, BL—and which un-restricts it from HLH to all hours in a month; and 4) the introduction of capacity and mitigation credits outside the Core Rate Design—charge billing determinants and the removal of the CDQ construct. The Super Peak Credit is retained as a more flexible and adaptable “Capacity Credit”.

The Tier 1 ~~rate~~Rate design described in this chapter consists of ~~three~~four Core Rate Design ~~elements~~charges: Tier 1 Energy Charges, Tier 1 Marginal Energy True-Up, Tier 1 Demand Charges, and Tier 1 Peak Load Variance Charges.

The ~~rate~~Tier 1 Rate design also includes ~~two~~three Core Rate Design Rate Impact Credits: the RICc, the RICm, and the RICj. The RICc

15

14 ensures customer’s forecast BP-29 Rate Period capacity needs are charged the embedded
 15 cost of capacity. The RICm ~~helps transition customers from~~gradually transitions customers’
 16 effective rate changes under the Tiered Rate Methodology (TRM) to the PRDM ~~by~~
 17 tempering rate impacts. The RICj gradually transitions mitigates in changes to Tier 1
 18 Demand Charges particular to a JOE that took power under the TRM.

19

4.1 Tier 1 Energy Charges

21 The Tier 1 Energy Charges are calculated by multiplying Tier 1 energy rates (mills/kWh) by
 22 the quantity of Tier 1 energy (kWh) associated with the applicable PF product. The
 23 number of Tier 1 energy rates, and thereby ~~energy charges~~Tier 1 Energy Charges,
 24 applicable during a Rate Period will be determined in each 7(i) Process; the PRDM does not
 25 dictate that a particular number of ~~energy charges~~Tier 1 Energy Charges be implemented.

26

1 The ~~energy charges~~Tier 1 Energy Charges will recover costs and credits allocated to the
2 Composite, Non-Slice, and Slice Cost Pools. The Tier 1 ~~energy charges~~Energy Charges that
3 recover costs allocated to the Composite Cost Pool apply to the Slice, Load Following, and
4 Block ~~products~~Products. The Tier 1 ~~energy charges~~Energy Charges that recover costs and
5 credits allocated to the Non-Slice Cost Pool apply to Load Following and Block
6 ~~products~~Products. The Tier 1 ~~energy charges~~Energy Charges that recover costs and credits
7 allocated to the Slice Cost Pool apply to the Slice ~~product~~Product.

9 **4.1.1 Tier 1 Energy Charge Billing Determinants**

10 The quantity of Tier 1 energy that forms the basis for the Tier 1 Energy Charge Billing
11 Determinant is defined as follows:

- 12 • A customer's Tier 1 Actual Hourly ~~Tier 1~~ Load will be used to calculate the Tier 1
13 Energy Charge Billing Determinants applicable to Load Following and Block
14 products—including the portion of Block that is purchased with the Slice
15 ~~product~~Product.
- 16 • A customer's Firm Slice Amount will be used to calculate the Tier 1 Energy Charge
17 Billing Determinants applicable to the Slice ~~product~~Product.

19 **4.1.2 Tier 1 Composite ~~Tier 1~~ Energy Rates**

20 BPA will establish Tier 1 Composite ~~Tier 1~~ Energy Rates in each 7(i) Process. ~~The~~Tier 1
21 Composite ~~Tier 1~~ Energy Rates are applicable to the Load Following, Block and Slice
22 ~~products~~Products (mills/kWh). The Tier 1 Composite ~~Tier 1~~ Energy Rates will be
23 calculated to recover costs and credits allocated to the Composite Cost Pool and will be
24 shaped across the year, using a fixed scalar (mills/kWh) and expected market-based prices
25 as determined in each 7(i) Process. The Tier 1 Composite ~~Tier 1~~ Energy Rates can be
26 positive or negative values.

1
 2 BPA will use a Monthly/Diurnal market-based price to shape its energy rates (*i.e.*, one HLH
 3 and one LLH for each of the 12 months for a total of 24 market-based prices each year)
 4 unless BPA develops a different market-based price approach in a 7(i) Process (for
 5 example, more or less granular).

6
 7 Prior to shaping, the annual average ~~annual~~ equivalent of the Tier 1 Composite ~~Tier 1~~
 8 Energy Rate is equal to:

$$9 \quad \text{CompositeTier1Rate}_{ave} = \frac{\text{CompositeCosts}}{\Sigma \text{ForecastTier1EBD}_{att}}$$

$$10 \quad \text{T1CompositeEnergyRate} = \frac{CCP_F}{\Sigma \text{T1EBD}_F}$$

11
 12
 13 where:

14 $\text{CompositeTier1Rate}_{ave}$ $\text{T1CompositeEnergyRate}$ = the annual average
 15 annual equivalent of the Tier 1 Composite ~~Tier 1~~ Energy Rates, expressed in
 16 mills/kWh, before being shaped, using a fixed scalar, to the market-based
 17 price as established in each 7(i) Process

18 — $\text{CompositeCosts} = CCP_F$ = the forecast total ~~costs~~ annual expenses and
 19 revenue credits in the applicable Fiscal Year of the Rate Period allocated to
 20 the Composite Cost Pool

21 $\Sigma \text{ForecastTier1EBD}_{att} = \text{T1EBD}_F$ = sum of forecast Tier 1 Energy Billing
 22 Determinants for Load Following, Block, and Slice ~~products~~ Products in kWh
 23

1 **4.1.3 Tier 1 Non-Slice Tier 1 Energy Rate**

2 BPA will establish a Tier 1 Non-Slice Tier 1 Energy Rate in each 7(i) Process. The Tier 1
3 Non-Slice Tier 1 Energy Rate is a rate applicable to the Load Following and Block
4 productsProducts (mills/kWh). The Tier 1 Non-Slice Tier 1 Energy Rate will be calculated
5 to recover costs and credits allocated to the Non-Slice Cost Pool and will be a single annual
6 rate. The Tier 1 Non-Slice Tier 1 Energy Rate can be a positive or negative value.

7
8
$$NonSliceTier1Rate = \frac{NonSliceCosts}{\Sigma ForecastTier1EBD_{NS}}$$

9
$$T1NonSliceEnergyRate = \frac{NSCP_F}{\Sigma T1EBD_{F,NS}}$$

10 where:

11 $NonSliceTier1Rate = T1NonSliceEnergyRate =$ Tier 1 Non-Slice Tier 1 Energy

12 Rate expressed in mills/kWh

13 $NonSliceCosts = NSCP_F =$ the forecast total costs annual expenses and revenue

14 credits in the applicable Fiscal Year of the Rate Period allocated to the Non-

15 Slice Cost Pool

16 $ForecastTier1EBD_{NS} = \Sigma T1EBD_{F,NS} =$ sum of forecast Tier 1 Energy Billing

17 Determinants for Load Following and Block productsProducts in kWh

18
19 **4.1.4 Slice-Tier 1 Slice Energy Rate**

20 BPA will establish a Slice-Tier 1 Slice Energy Rate in each 7(i) Process. The Slice-Tier 1 Slice
21 Energy Rate is applicable to the Slice productProduct (mills/kWh). The Slice-Tier 1 Slice
22 Energy Rate will be calculated to recover costs and credits allocated to the Slice Cost Pool
23 and will be a single rate annual rate. The Slice-Tier 1 Slice Energy Rate can be a positive or
24 negative value.

$$\text{SliceTier1Rate} = \frac{\text{SliceCosts}}{\Sigma \text{ForecastTier1EBD}_S}$$

$$\text{T1SliceEnergyRate} = \frac{\text{SCP}_F}{\Sigma \text{T1EBD}_{F.S}}$$

where:

$\text{SliceTier1Rate} = \text{Slice-T1SliceEnergyRate}$ = Tier 1 Slice Energy Rate expressed in mills/kWh

$\text{SliceCosts} = \text{SCP}_F$ = the forecast total costs annual expenses and revenue credits in the applicable Fiscal Year of the Rate Period allocated to the Slice Cost Pool

$\text{ForecastTier1EBD}_S = \Sigma \text{T1EBD}_{F.NS}$ = sum of forecast Tier 1 Energy Billing Determinants for the Slice ~~product~~ Product in kWh

4.2 Tier 1 Marginal Energy True-Up Charge

At the end of each Fiscal Year, BPA will calculate a Tier 1 Marginal Energy True-Up Charge. The Tier 1 Marginal Energy True-Up will be applicable to the Load Following, Block and Slice ~~products~~ Products. The Tier 1 Marginal Energy True-Up could be either a credit or a charge depending on actual energy use, CHWM amounts, and the directional difference between Tier 1 Rates and market prices. The purpose of the Tier 1 Marginal Energy True-Up is to: 1) provide customers full access to their CHWM; 2) ensure that a market-based energy rate is applied to energy use in excess of a customer's CHWM; 3) incent accurate load forecasts; ~~and~~ 4) appropriately account for forecast directional differences between ~~PF~~ Tier 1 Rates and market prices; ~~and~~ 5) in the case of the Slice Product, streamline, or potentially eliminate, the need for a separate Requirement Slice Output (RSO) Test under the CHWM Contract for the Slice Product by ensuring that RSO purchased by a Slice customer that is not used to serve the customer's Total Retail Load is purchased at market-based energy rates rather than at Tier 1 Rates.

The final Tier 1 Marginal Energy True-Up may be either a charge or a credit to a customer. If a charge, such charge shall be applied as a three-month charge spread equally across the three months following the month the final Tier 1 Marginal Energy True-Up Charge is determined by BPA. If a credit, BPA will pay any amounts owed to the customer in a single first-month bill credit. No interest will apply for charges or credits provided in this manner.

4.2.1 Tier 1 Marginal Energy True-Up Billing Determinant for the Load Following Product

The Tier 1 Marginal Energy True-Up Billing Determinant for the Load Following product is calculated using the following equations:

Condition 1: If a Load Following customer has Above-CHWM Load and the annual sum of a customer's Tier 1 Actual Hourly Tier 1 Load is less than its CHWM, then the Tier 1 Marginal Energy True-Up billing determinant is equal to:

$$METU_{BD} = \text{Minimum}(ACHWM, CHWM - \Sigma AHT1L_{\text{Annual}})(ACHWM, CHWM - \Sigma T1AHL_A) \times -1$$

where:

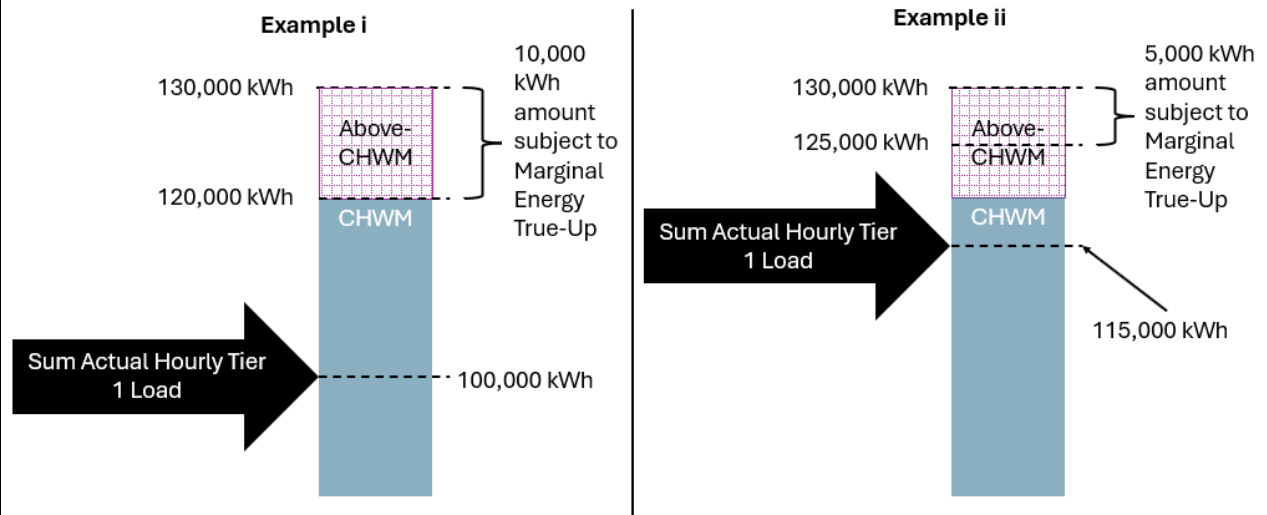

$METU_{BD}$ = Tier 1 Marginal Energy True Up Billing Determinant in kWh

$ACHWM$ = the customer's Above Contract High Water Mark Load in annual kWh

$CHWM$ = the customer's Contract High Water Mark Load in annual kWh

$\Sigma AHT1L_{\text{Annual}}$ $T1AHL_A$ = the customer's annual sum of Tier 1 Actual Hourly Tier 1 Load in kWh

Figure 4-1, Load Following Condition 1, Examples

Condition 2: If a Load Following customer's annual sum of a customer's Tier 1 Actual Hourly Tier 1 Load is greater than its CHWM, then the Tier 1 Marginal Energy True-Up ~~billing determinant~~ Billing Determinant is equal to:

$$METU_{BD} = \sum AHT1L_{Annual} - T1AHL_A - CHWM$$

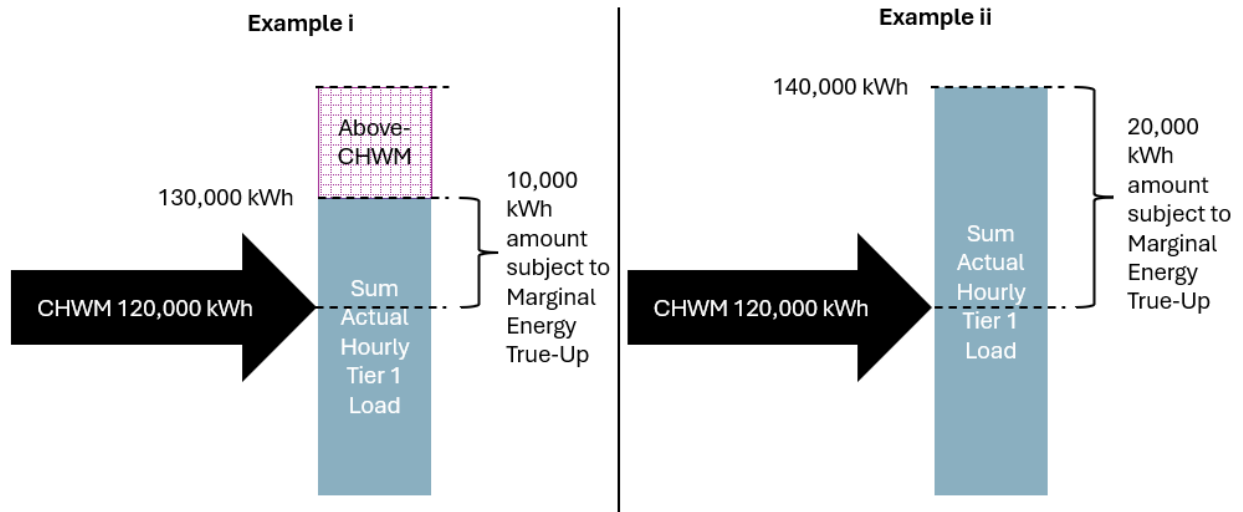

where:

$METU_{BD}$ = Tier 1 Marginal Energy True Up Billing Determinant in kWh

$\sum AHT1L_{Annual} - \sum T1AHL_A$ = the customer's annual sum of Tier 1 Actual Hourly Tier 1 Load in kWh

$CHWM$ = the customer's Contract High Water Mark Load in annual kWh

Figure 4-2, Load Following Condition 2, Examples

If neither Condition 1 nor Condition 2 apply, then the Load Following customer’s Tier 1 Marginal Energy True-Up billing determinant Billing Determinant is zero.

4.2.2 Tier 1 Marginal Energy True-Up Billing Determinant for the Block and Slice Products

The Tier 1 Marginal Energy True-Up for the Block and Slice products Products is calculated using the following equations:

Condition 1: If a Block or Slice customer has no Above-~~RHWM~~CHWM Load and an Actual Annual Net Load that is greater than its Forecast Tier 1 Annual Net Load, then the Tier 1 Marginal Energy True-Up billing determinant Billing Determinant is equal to:

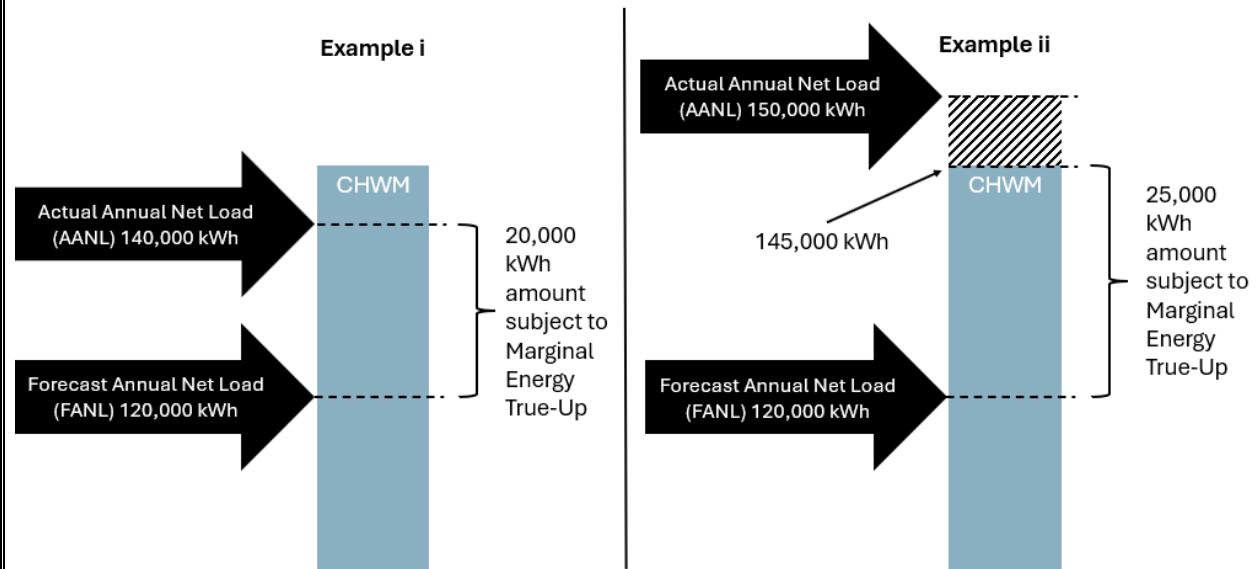

$$METU_{BD} = \text{Minimum}(AANL - FANL, CHWM - FANL) \times -(ANL_A - ANL_F, CHWM - ANL_F) \times -1$$

where:

$$METU_{BD} = \text{Tier 1 Marginal Energy True Up Billing Determinant in kWh}$$

$AANL$ = the customer's Actual Annual Net Load in annual kWh
 $FANL$ = the customer's Forecast Annual Net Load in annual kWh
 $CHWM$ = the customer's Contract High Water Mark Load in annual kWh

Figure 4-3. Block and Slice Condition 1. Examples

Condition 2: If a Block or Slice customer has no Above-CHWM Load and an Actual Annual Net Load that is less than its Forecast Annual Net Load, then the Tier 1 Marginal Energy True-Up ~~billing determinant~~ Billing Determinant is equal to:

$$METU_{BD} = FANL - AANL - ANL_A$$

where:

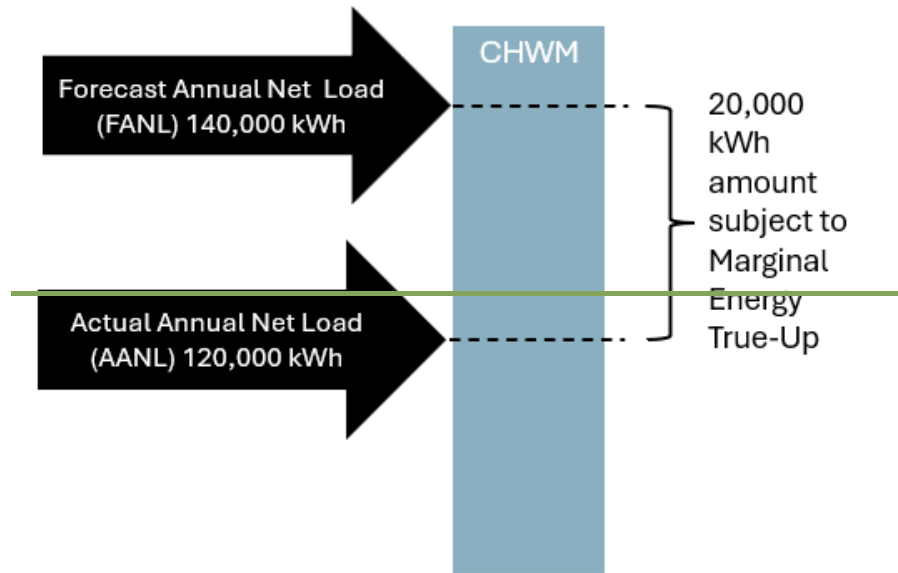

$METU_{BD}$ = Tier 1 Marginal Energy True Up Billing Determinant in kWh

$FANL$ = the customer's Forecast Annual Net Load in annual kWh

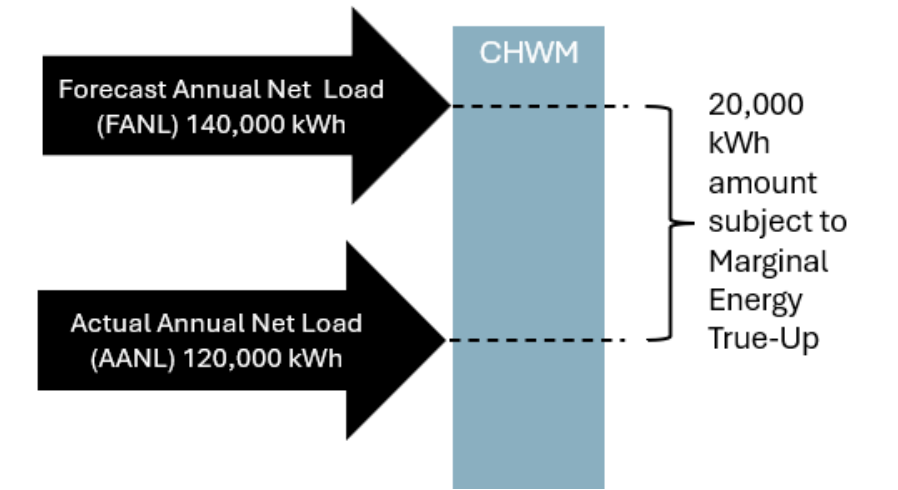

$AANL$ = the customer's Actual Annual Net Load in annual kWh

1

Figure 4-4. Block and Slice Condition 2, Example

2

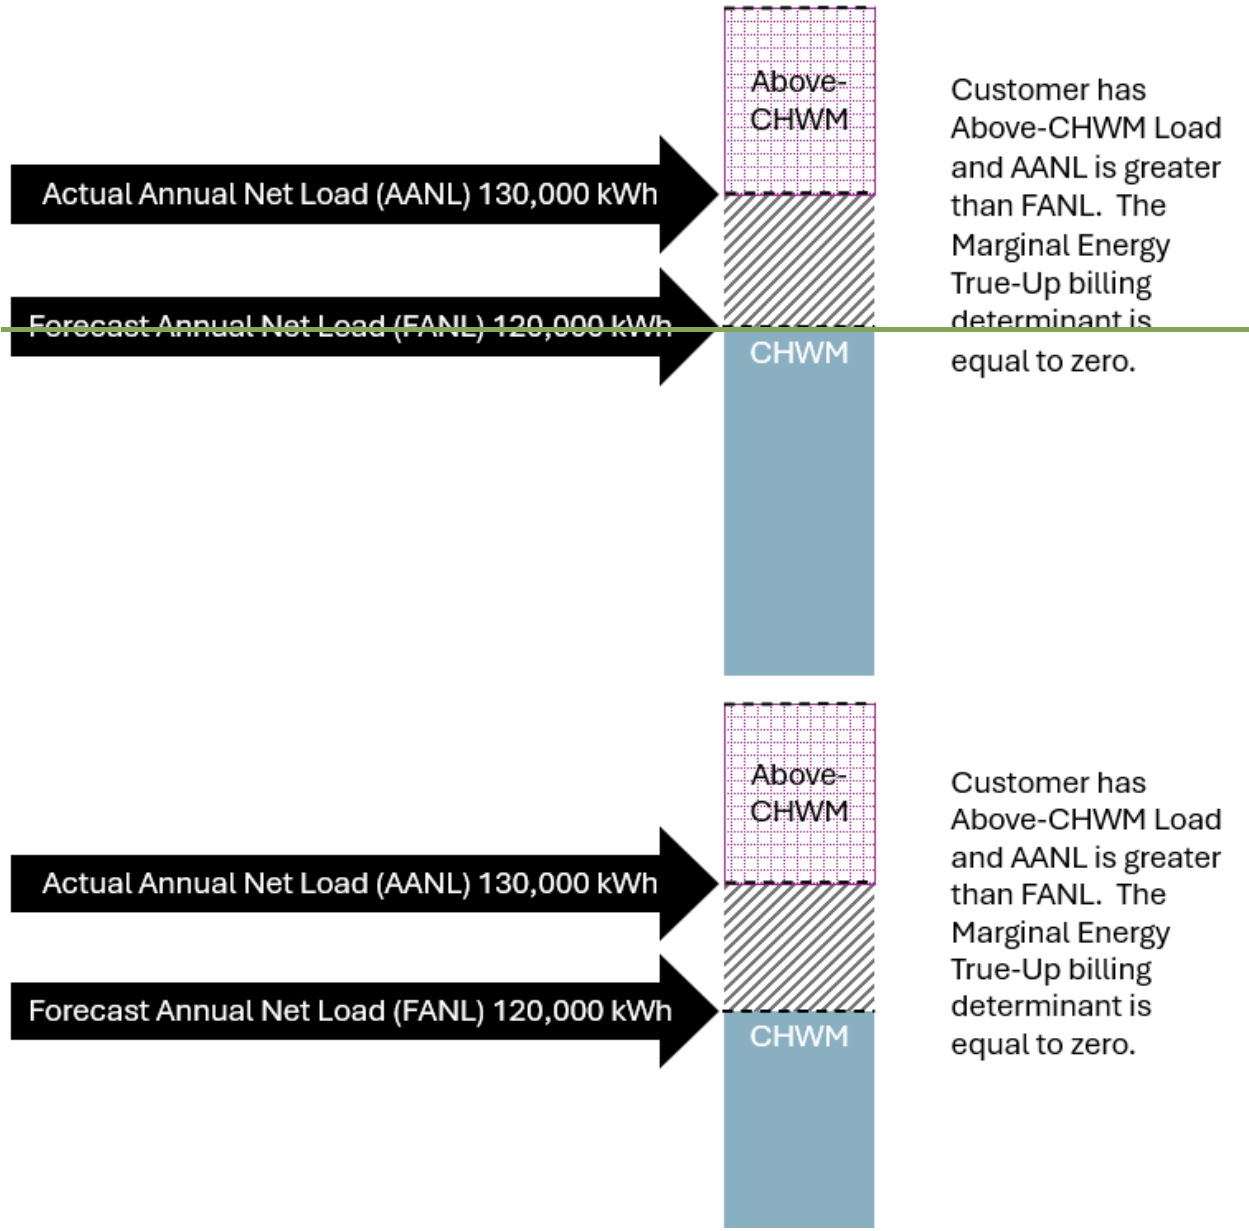

3

4

5 Condition 3: If a Block or Slice customer has Above-~~RHWM~~ CHWM Load and an Actual
 6 Annual Net Load that is greater than or equal to its Forecast Annual Net Load, then the
 7 Tier 1 Marginal Energy True-Up billing determinant ~~Billing Determinant~~ is equal to zero.

8

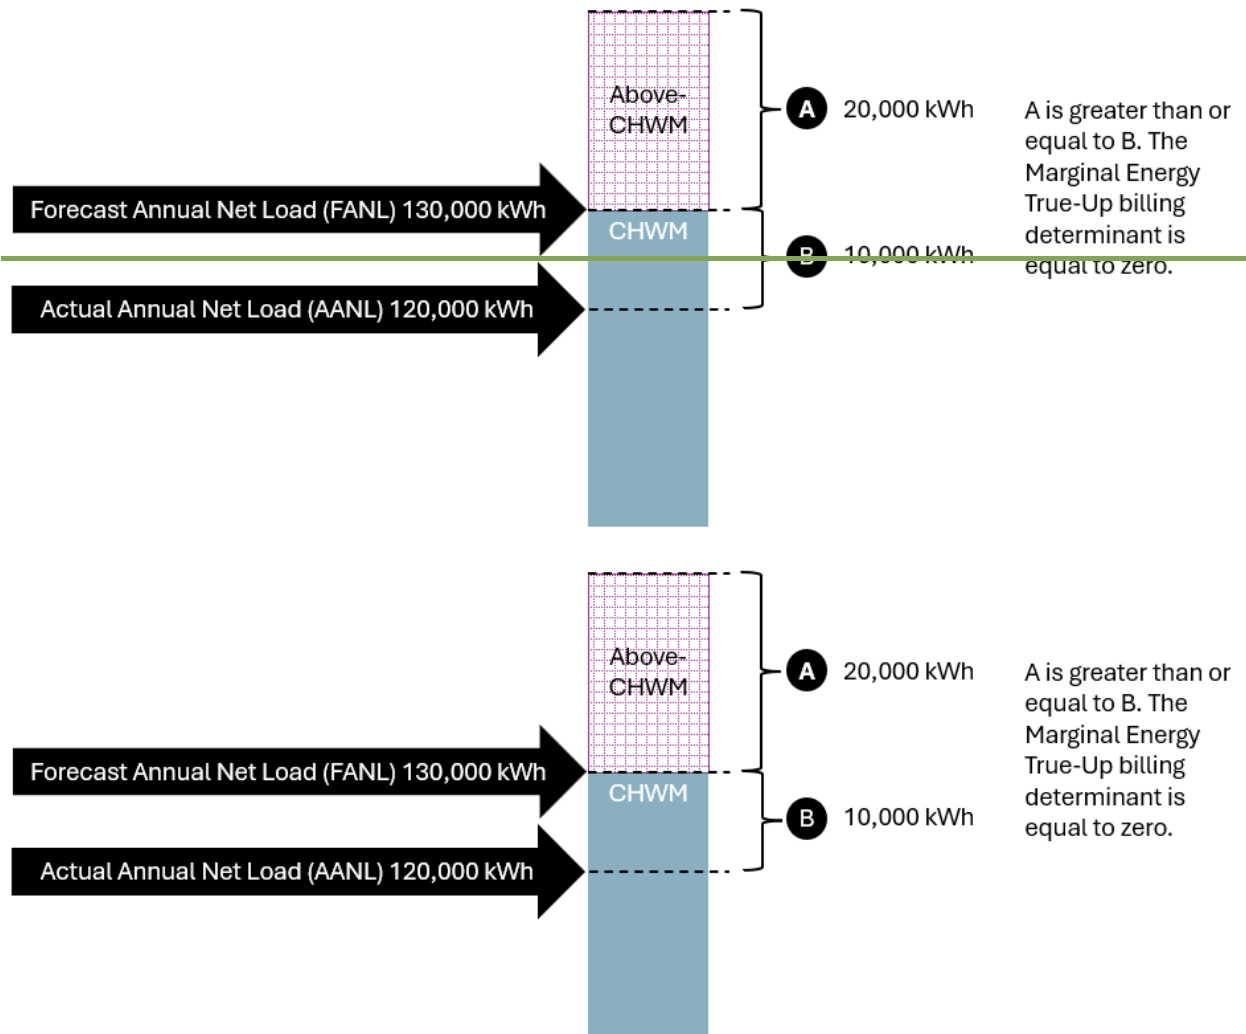

Figure 4-5. Block and Slice Condition 3, Example

Condition 4: If a Block or Slice customer has Above-CHWM Load and an Actual Annual Net Load that is less than its Forecast Annual Net Load, then two checks will be evaluated to determine the Tier 1 Marginal Energy True-Up billing determinant.

Condition 4 Check 1: If the Block or Slice customer's Above-CHWM Load is greater than or equal to its Forecast Annual Net Load minus its Actual Annual Net Load, then the Tier 1 Marginal Energy True-Up billing determinant Billing Determinant is equal to zero.

Figure 4-6. Block and Slice Condition 4: Check 1, Example

Condition 4 Check 2: If the Block or Slice customer's Above-CHWM Load is less than its FANL minus its AANL, then the Tier 1 Marginal Energy True-Up billing determinant Billing Determinant is equal to:

11
12

$$METU_{BD} = FANL - AANL - ANL_F - ANL_A - ACHWM$$

where:

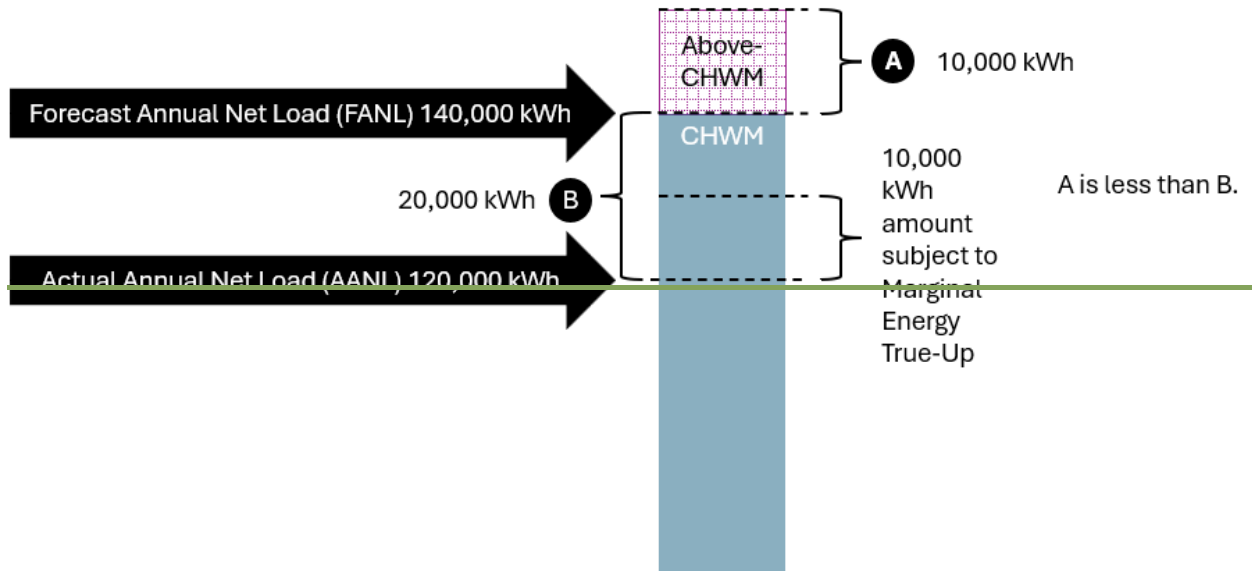

$METU_{BD}$ = Tier 1 Marginal Energy True Up Billing Determinant in kWh

$FANL$ = the customer's Forecast Annual Net Load in annual kWh

$AANL$ = the customer's Actual Annual Net Load in annual kWh

$ACHWM$ = the customer's Above Contract High Water Mark Load in annual kWh

Figure 4-7. Block and Slice Condition 4: Check 2, Example

4.2.3 Tier 1 Marginal Energy True-Up Rate

A customer's Tier 1 Marginal Energy True-Up Rate is the mills/kWh difference between a flat annual block of power purchased from BPA: 1) at its Tier 1 energy rates applicable to the Non-Slice ~~product~~Product, including a customer's Low Density Discount (LDD), RIC_C and RIC_M, and 2) the same amount of power had it been purchased at a market-based price. The Tier 1 Marginal Energy True-Up Rate can be negative or positive, and is specific to each customer. The market-based price will be established in each 7(i) Process. The formula BPA will use to calculate the customer's Marginal Energy True Up Rate is as follows:

$$METU_R = FB_{MKT} - \{([FB_{COMP} + NS_R] \times [1 - LDD]) + RIC_C + RIC_M\}$$

where:

$METU_R$ = a customer's Tier 1 Marginal Energy True Up Rate expressed in mills/kWh for a Fiscal Year

FB_{MKT} = the mills/kWh market price of a flat annual block of power as established in each 7(i) Process

1 FB_{COMP} = ~~the~~ mills/kWh cost of a flat annual block of power purchased at BPA's

2 Tier 1 Composite~~Tier 1~~ Energy Rates

3 NS_R = the Tier 1 Non-Slice ~~Tier 1~~ Energy Rate expressed in mills/kWh for a

4 Fiscal Year

5 LDD = a customer's Low Density Discount applicable to the Fiscal Year subject
6 to the Tier 1 Marginal Energy True-Up

7 RIC_C = a customer's RIC_C for the Fiscal Year subject to the Tier 1 Marginal
8 Energy True-Up expressed in mills/kWh

9 RIC_M = a customer's RIC_M for the Fiscal Year subject to the Tier 1 Marginal
10 Energy True-Up expressed in mills/kWh

11 12 **4.3 Tier 1 Demand Charge**

13 ~~There are 12 Demand Charges—one for each month of the year—that are designed to send~~
14 ~~a~~The Tier 1 Demand Charge sends a long-run marginal price signal to customers to ~~both~~
15 encourage the efficient use of capacity. Tier 1 Demand Charge under this Section 4.3,
16 together with Tier 1 Peak Load Variance Charges under Section 4.4, are also designed to
17 recover the ~~cost~~costs of BPA holding capacity to serve customer loads and encourage the
18 efficient use of capacity. Forecast ~~revenue~~revenues received from the Tier 1 Demand
19 ~~Charges~~Charge are credited to the Non-Slice Cost Pool. ~~These~~The Tier 1 Demand Charges
20 ~~are~~Charge is applicable to the Load Following and Block ~~products~~Products. The Tier 1
21 Demand Charge is calculated as the Tier 1 Demand Charge Billing Determinant multiplied
22 by the Tier 1 Demand Rate.

23 24 **4.3.1 Tier 1 Demand Charge Billing Determinant**

25 BPA will use two quantities to calculate a customer's monthly Tier 1 Demand Charge Billing
26 Determinant: the customer's monthly Tier 1 Customer System Peak, and the customer's

1 monthly average Tier 1 Actual Hourly Tier 1 Load. The following formula will be used to
2 calculate a customer's monthly Tier 1 Demand Charge Billing Determinant:

$$3$$
$$4 \quad \text{DemandBD}_{Mo} = \text{CSP}_{\text{Tier1},Mo} - \text{AHT1L}_{\text{ave},Mo}$$
$$5 \quad \text{T1DBD}_{Mo} = \text{T1CSP}_{Mo} - \text{T1AHL}_{A,Mo}$$

6 where:

7 $\text{DemandBD}_{Mo} = \text{T1DBD}_{Mo} =$ Tier 1 Demand Billing Determinant expressed in
8 kW per month (kW/Mo)

9 $\text{CSP}_{\text{Tier1},Mo}$ T1CSP_{Mo} = Tier 1 Customer System Peak each month expressed in
10 kW

11 $\text{AHT1L}_{\text{ave},Mo}$ $\text{T1AHL}_{A,Mo}$ = customer's average Tier 1 Actual Hourly Tier 1 Load
12 each month expressed in kW

13
14 For a Joint Operating Entity (JOE), the calculation of the Tier 1 Demand Charge Billing
15 Determinant will be based on a summation of the Tier 1 Demand Charge Billing
16 Determinant of each individual member utility member.

18 **4.3.2 Tier 1 Customer System Peak**

19 A customer's Tier 1 Customer System Peak is equal to the customer's maximum Tier 1
20 Actual Hourly Tier 1 Load for each month.

22 **4.3.3 Average Tier 1 Actual Hourly Tier 1 Load**

23 The average Tier 1 Average Actual Hourly Tier 1 Load is calculated as the sum of the
24 customer's Tier 1 Actual Hourly Tier 1 Load each month, expressed in kilowatt hours,
25 divided by the total amount of hours in the same month.

1 **4.3.4 Tier 1 Demand Rate Rates**

2 ~~The Demand Rate~~ There are 12 Tier 1 Demand Rates, one for each month of the year. Tier 1
3 Demand Rates will be based on the annual fixed costs (*e.g.*, capital, fixed fuel, and fixed
4 operations and maintenance (O&M)) of the Marginal Capacity Resource, as adjusted for any
5 offsetting fixed revenue of the Marginal Capacity Resource or potential multiple uses of that
6 capacity, as determined in each 7(i) Process. The Marginal Capacity Resource may be based
7 on BPA's Resource Program, BPA's actual acquisitions, or third-party sources. Third-party
8 sources may include, but are not limited to, the Energy Information Administration, EPRI
9 Technical Assessment Guide, the Northwest Power and Conservation Council, and
10 Integrated Resource Plans of Pacific Northwest electric utilities.

11
12 The annual fixed costs of the Marginal Capacity Resource, as potentially adjusted
13 downward to account for fixed revenue or multiple uses (for example, a battery used for
14 shaping energy and voltage support), will be used to calculate an annual Tier 1 Demand
15 Rate and will be shaped across the 12 months to create 12 monthly Tier 1 Demand Rates.
16 The shape of the monthly Tier 1 Demand Rates will be established using monthly market-
17 based prices, such as BPA's market energy price forecast or the monthly cost of capacity if a
18 viable capacity market, or other mechanism valuing seasonable capacity, develops in the
19 Pacific Northwest, as established in each 7(i) Process.

20
21 **4.3.5 Tier 1 Demand Rate Adjustment Cap**

22 Increases and decreases to the monthly Tier 1 Demand Rates will be limited to ~~5%~~
23 maximum 10 percent (upward or downward) change every two years, with the exception of
24 the Tier 1 Demand Rates set for the BP-29 Rate Period when the first Tier 1 Demand Rates
25 under PRDM are established.

1 **4.3.6 Capacity Credits**

2 See Appendix E for the overall framework for how the Existing and New Capacity Credits
3 apply.

4
5 **4.3.6.1 Existing Capacity Credit**

6 An Existing Capacity Credit will be applied when a Load Following customer has a
7 Dedicated Resource that is an Existing Resource that has a capacity obligation that is
8 greater than its monthly Exhibit A amount.

9
10 The amount of the Existing Capacity Credit will be established in each 7(i) Process as
11 described in this paragraph. The Existing Capacity Credit will be based on the embedded
12 cost of Supplemental Operating Reserves, or its successor, adjusted to reflect the Tier 1
13 System Resources only, and shaped into months using each Rate Period’s monthly Tier 1
14 Demand Rates described in this chapter. The Existing Capacity Credit may be discounted to
15 the specific characteristics of each source of capacity to account for any potential limits in
16 availability like frequency and duration of use. The ~~New~~Existing Capacity Credit may
17 account for other operational characteristics of the capacity that add or subtract value. Any
18 energy provided using this capacity will be credited to the customer at ~~the applicable~~
19 Composite Tier 1 Energy Rates, market-based rates as determined in each 7(i) Process. The
20 use of ~~the~~ capacity will not impact the measurement of the Tier 1 Customer System Peak
21 and Tier 1 Actual Hourly ~~Tier 1~~ Load.

22
23 **4.3.6.2 New Capacity Credit**

24 A customer can qualify for a New Capacity Credit by contractually committing to provide
25 BPA access to capacity not otherwise committed to the customer’s load which, as
26 determined solely by BPA, either: 1) reduces the Administrator’s capacity obligations, or

2) can be used by BPA to help meet the Administrator’s capacity obligations. The allocation of the cost of providing the New Capacity Credit will be determined in each 7(i) Process and may be functionalized to Power, Transmission, or a partial allocation to both. When the cost is functionalized to Power’s Revenue Requirement, that cost of providing the New Capacity Credit will be allocated consistent with the BPA’s statutes, *see* Figure 2-1, and the principles in Section 2.1 above.

The amount of the New Capacity Credit will be established in each 7(i) Process and will be tailored to the characteristics of the capacity provided. The New Capacity Credit will be based on the marginal cost of capacity, such as the Marginal Capacity Resource as used to establish the Tier 1 Demand Rates described in this chapter; and potentially discounted to the specific characteristics of each source of capacity to account for any potential limits in availability like frequency and duration of use. The New Capacity Credit may account for other operational characteristics of the capacity that add or subtract value, such as, but not limited to, accounting for any applicable energy value and recharge costs. The New Capacity Credit will also be constructed with consideration of the potential impact on the Tier 1 Customer System Peak and Tier 1 Actual Hourly ~~Tier 1~~ Load to limit situations where BPA would pay the customer twice for the same capacity—once through the New Capacity Credit and again through a reduction in Tier 1 Demand and Tier 1 Energy Charge revenue—while also considering implementation ease and practicality.

4.4 Tier 1 Peak Load Variance Charge

The Tier 1 Peak Load Variance Charge(s) (PLVC), are applicable to the Load Following ~~product~~Product and to eligible Block ~~product~~Product customers ~~who~~that elect the Peak Load Variance Service (PLVS). The PLVC recovers the cost of holding capacity for load excursions outside BPA’s expected ~~peak load forecast~~.P50 (50th percentile which means that

1 50 percent of the peak load forecast will be equal to or exceed this value) peak load forecast
2 up to BPA's P10 peak load forecast (10th percentile which means that 10 percent of the peak
3 load forecast will be equal to or exceed this value). Such additional capacity will be
4 adjusted downward for the portion that is recovered through other charges, like Operating
5 Reserves. The costs recovered through the PLVC will be established using BPA's embedded
6 cost of Supplemental Operating Reserves, or its successor, adjusted to reflect the Tier 1
7 System Resources only, and shaped into months using each Rate Period's monthly Tier 1
8 Demand Rates. PLVC for the Load Following ~~product~~Product will: 1) reflect applicable load
9 diversity benefits; 2) be evaluated using a monthly embedded cost of a shared pool of
10 capacity; and 3) only apply in months where BPA establishes a capacity planning standard
11 applicable to its PF Public load obligations as determined in each 7(i) Process.

12
13 ~~The billing determinants and~~The PLVC for the Load Following Product will be calculated
14 using energy Billing Determinants expressed in kilowatthours and the rate will be
15 expressed in a single mills/kWh. The PLVC rate design applicable to the Block Product will
16 be established in each 7(i) Process. The specific loads to include the energy Billing
17 Determinants and the rates used to calculate the PLVC will be established in each 7(i)
18 Process and may be different as between the Load Following ~~product~~Product and the Block
19 ~~product~~Product if planning, access to and use of PLVS capacity is determined to be
20 materially different across the products. (i.e., the cost of PLVC will be set commensurate
21 with the service provided). For example, if the Block ~~product~~Product can be used in a way
22 that decreases load diversity and shared pool benefits or if the Block ~~product~~Product has
23 access to PLVS capacity in months other than those where BPA establishes a capacity
24 planning standard applicable to its PF Public load obligations. Revenue from the PLVC will
25 be credited to the Non-Slice Cost Pool.

1 Energy provided through PLVS for the Load Following ~~product~~Product will be included in
2 Tier 1 Actual Hourly Tier 1 Load, and will be subject to all other applicable Tier 1 rates.
3 Energy provided through PLVS for the Block ~~product~~Product will be priced at a market-
4 based energy rate as established in each 7(i) Process and will apply to any additional
5 monthly energy taken through the PLVS above the customer's contractually defined Block
6 amount. Energy provided through PLVS for the Block ~~product~~Product within its
7 contractually defined Block amount will be treated as Block load served at Tier 1 Rates.

8 9 **4.5 Tier 1 Rate Impact Credits**

10 The ~~rate design~~Core Rate Design includes ~~two~~three Rate Impact Credits: the Rate Impact
11 Credit for Capacity (RICc), the Rate Impact Credit, Mitigation (RICm), and the ~~RICm-Rate~~
12 Impact Credit for the JOE (RICj). The RICc ensures forecast BP-29 capacity needs are
13 charged the embedded cost of capacity. The RICm is a rate design mitigation tool used for
14 transitioning customers from rates in the ~~Tiered Rate Methodology (TRM)~~ to rates in the
15 PRDM, by tempering TRM to rates in the PRDM, by tempering rate impacts over time. The
16 RICj is a rate design mitigation tool used for transitioning a JOE (on behalf of its member)
17 that paid rates under the TRM to the rate design under the PRDM, by tempering the Tier 1
18 Demand Charge rate impacts over time.

19
20 For a ~~Joint Operating Entity (JOE)~~, the calculation and application of the RICc and RICm will
21 be ~~by individual utility member.~~ a summation of each member's RICc and RICm. The RICj
22 would be calculated and applied to the JOE.

23 24 **4.5.1 Rate Impact Credit, Capacity (RICc)**

25 The ~~Rate Impact Credit for Capacity (RICc)~~ credits the customer's energy rate for the cost
26 difference between the marginal Tier 1 Demand Rate and BPA's embedded cost of capacity

1 applied to the customer's forecast BP-29 Rate Period capacity needs. RICc is calculated for
2 all customers regardless of BP-29 Rate Period product choice but will only be applied to the
3 Load Following and Block Only ~~products~~Products. RICc is calculated using the effective rate
4 difference resulting from an application of the marginal ~~demand rate~~Tier 1 Demand Rate
5 and BPA's embedded cost of capacity. The cost of the RICc will result in a reduction in the
6 demand revenue credited to the Non-Slice Cost Pool.

7
8 The RICc for each Load Following customer is equal to the difference between (1) the
9 annual Tier 1 effective rate (mills/kWh) using BP-29 Rate Period forecast ~~billing~~
10 ~~determinants~~Billing Determinants applied to marginal Tier 1 Demand Rates for the subject
11 Rate Period and (2) the annual Tier 1 effective rate (mills/kWh) using the same BP-29 Rate
12 Period forecast ~~billing determinants~~Billing Determinants applied to an embedded cost of
13 capacity rate (~~mills/kWh~~). The embedded cost of capacity rate is calculated using the
14 embedded cost of Supplemental Operating Reserves, ~~or its successor, as~~ established for the
15 BP-29 Rate Period, adjusted to only reflect the Tier 1 System Resources ~~only~~for the BP-29
16 Rate Period, and shaped into months using each Rate Period's monthly Tier 1 Demand
17 Rates.

18
19 The RICc for Block and Slice ~~product~~Product customers is calculated the same as for a Load
20 Following customer, with the added assumption that each Block and Slice ~~product~~Product
21 customer elected to take only the Block ~~product~~Product with a shaping capacity equal to
22 the greater of: 1) the customer's BP-29 Rate Period contractual shaping amount, and 2) the
23 maximum amount of shaping capacity the customer could have taken during the BP-29
24 Rate Period without being subject to a Peak Net Requirement check. As an alternative, a
25 Block or Slice Product customer can also elect, at CHWM Contract signing, to have its RICc

1 calculated using FY 2029 Peak Net Requirement data and its FY 2029 weather-normalized
2 loads as established through a 7(i) Process.

3
4 The formula applied to all products is as follows:

$$RIC_c = Max \left\{ 0, \frac{\sum_{i=1}^{12} (DemandRate_i - ECC_i) \times DemandBD_i}{T1Energy_{RICc}} \right\}$$

7 where:

8 RIC_c = is a customer's Rate Impact Credit for Capacity expressed in mills/kWh

9 i = a month of the year

10 DemandRate_i = is the monthly Tier 1 Demand Rate applicable to each Rate
11 Period expressed in mills/kW defined in section 4.3.4 above.

12 ECC_i = is the embedded monthly cost of capacity calculated for the BP 29 Rate
13 Period ~~and~~, shaped to the monthly Tier 1 Demand Rates applicable to each
14 Rate Period expressed in mills/kW

15 DemandBD_i = is the customer's monthly BP-29 Rate Period forecast Tier 1
16 Demand Billing Determinants for a Load Following customer or, for a Block
17 and Slice customer, the greater of 1) the customer's BP-29 Rate Period
18 contractual shaping amount and 2) the maximum amount of shaping
19 capacity the customer could have taken during the BP-29 Rate Period
20 without being subject to a Peak Net Requirement check

21 T1Energy_{RICc} = is the customer's sum of BP-29 Rate Period forecast Tier 1
22 energy

1 **4.5.1.1 Recalculation of RICc**

2 The RICc will be recalculated in each 7(i) Process based solely on changes to the marginal
3 Tier 1 Demand Rates as prescribed in Section 4.3.4. above.

4
5 BPA may recalculate a Load Following customer’s RICc for application starting in the BP-31
6 Rate Period if BPA determines that a customer’s BP-29 Rate Period forecast Tier 1 Demand
7 Billing Determinants in any month is more than 15 percent different (larger or smaller)
8 than the billing determinantsBilling Determinants that would result using the customer’s
9 weather-normalized actual FY 2029 load. In such a situation, the RICc for an applicable
10 Load Following customer would be recalculated using the formula in Section 4.5.1, but with
11 the following changes: 1) the customer’s BP-29 Rate Period forecast Tier 1 Billing
12 Determinants (*DemandBD_i*) will be replaced with the customer’s Tier 1 Billing
13 Determinants calculated using weather-normalized actual FY 2029 load; and 2) the
14 customer’s sum of BP-29 Rate Period forecast Tier 1 energy (*T1Energy_{RICc}*) will be
15 replaced with the customer’s Tier 1 energy calculated using weather-normalized actual FY
16 2029 load.

17
18 A customer’s RICc may also be adjusted, at BPA’s sole discretion, in a 7(i) Process to account
19 for the customer’s demand response actions taken between FY 2025 and FY 2028 that can
20 be quantifiably demonstrated by the customer to have materially changed the customer’s
21 BP-29 Rate Case forecast or its FY 2029 weather normalized loads.

22
23 **4.5.1.2 Calculation of RICc for New Publics**

24 When a New Public is formed entirely from another Existing Public customer with a RICc,
25 the New Public’s RICc will be set equal to the Existing Public’s RICc. When a New Public is
26 formed entirely from a combination of Existing Public customers, a Tier 1 Load weighted

1 RICc will be calculated for the New Public. Under either scenario, the Existing Public
2 customer's RICc will remain unchanged.

3
4 When a New Public is formed entirely from an entity other than an Existing Public, a RICc
5 will be established for the New Public, and will be calculated as described ~~above~~ in
6 ~~Section 4.5.1~~ this section, except the underlying load forecast will be that associated with
7 the first Rate Period in which the New Public is eligible to purchase power at BPA's Tier 1
8 Rates. When a New Public is formed in part by an entity other than an Existing Public and
9 in part by Existing Public(s), BPA may, in its sole discretion, use a weighted average RICc
10 methodology that takes into consideration the multiple sources of all the Tier 1 Load, or
11 BPA may choose to calculate the RICc assuming the New Public was formed entirely from
12 an entity other than an Existing Public.

13 14 **4.5.1.3 Calculation of RICc for Existing-to-Existing Public Annexation**

15 A customer's RICc will not be recalculated for the Existing Public that is having its Tier 1
16 Load reduced due to annexation. The Existing Public gaining Tier 1 Load as a result of the
17 annexation will have its RICc recalculated based on the weighted average of (1) its prior-to-
18 annexation Tier 1 Load and associated RICc, and (2) the annexed Tier 1 Load and the RICc
19 associated with that load.

20 21 **4.5.1.4 Product Switching and RICc**

22 A RICc will not be recalculated because of a product switch.

23 24 **4.5.2 Rate Impact Credit, Mitigation (RICm)**

25 The Rate Impact Credit for Mitigation (RICm) phases in rate impacts attributed to rate
26 design changes between the previous and current Core Rate Design charges (TRM to 2029

1 PRDM). The Core Rate Design charges under the TRM include: Customer Charges, Load
2 Shaping Charges, and Tier 1 Demand Charges. The Core Rate Design charges under the
3 PRDM include: Tier 1 Energy Charges, Tier 1 Marginal Energy True-Up, Tier 1 Demand
4 Charge, and the Tier 1 Peak Load Variance Charge. Although the Tier 1 Marginal Energy
5 True-Up and the Tier 1 Peak Load Variance Charge for the Block product are considered
6 Core Rate Design elements of the PRDM, these two are not considered Rate-Design Changes
7 considered for purposes of the RICm. The RICm will not measure any other potential
8 sources of rate impacts, such as differences in the allocation of costs and credits, changes in
9 the calculation of the Irrigation Rate Discount and changes in the Low Density Discount.
10 The RICm will also not include the Tier 1 Peak Load Variance Charge for Block customers
11 that are either (1) not eligible to purchase or ; (2) do not elect to purchase the PLVS for the
12 BP-29 rate period. For Block customers that are eligible and elect to purchase the PLVS for
13 the BP-29 rate period, the RICm will be measured by assuming a PLVC that is the same as if
14 the customer were purchasing the Load Following Product.

15 The Rate Impact Credit for Mitigation (RICm) phases in rate impacts attributed to rate
16 design changes between the previous and current Core Rate Design charges (Tiered Rate
17 Design (TRM) to 2029 Public Rate Design Methodology).PRDM). The Core Rate Design
18 charges under the TRM include the: Customer Charges, the Load Shaping Charges, and
19 the Tier 1 Demand Charges. The Core Rate Design charges under the PRDM include the:
20 Tier 1 Energy Charges, the Tier 1 Marginal Energy True-Up, Tier 1 Demand ChargesCharge,
21 and the Tier 1 Peak Load Variance Charge. Although the Tier 1 Marginal Energy True-Up
22 and the Tier 1 Peak Load Variance Charge for the Block product are considered Core Rate
23 Design elements of the PRDM, these two are not considered Rate-Design Changes
24 considered for purposes of the RICm. The RICm will not measure any other potential
25 sources of rate impacts, such as differences in the allocation of costs and credits, changes in

~~the calculation of the Irrigation Rate Discount and changes in the Low-Density Discount.~~
~~The RICm will also not include the Tier 1 Peak Load Variance Charge for Block customers.~~

The RICm is a rate credit that can be either positive or negative and is specific to each customer (mills/kWh). The RICm sets a positive-cap, or ceiling, ~~for forecast rate impacts caused solely by the Core Rate Design,~~ at the outset of the 2029 PRDM. The cost of that rate impact cap is allocated to ~~the~~ customers with forecast negative rate impacts based on an effective negative-cap, or floor, for rate impacts at the outset of the 2029 PRDM. The negative-cap, or floor, is solved for by increasing the floor for all customers until the sum of the RICm charges (*e.g.*, negative credits) is equal to the sum of the RICc credits. The BP-29 rate impact positive-cap will be 2 percent. The RICm will be phased out ~~each in two-year increments~~ after FY ~~2029~~ 2030 by adding ~~0.10~~ 0.15 mills/kWh to each customer's negative RICm until the customer's RICm is zero or above. When a customer's two-year RICm flips from being negative to positive, that customer's RICm will be deemed fully phased out and be set to zero. A positive RICm will decline in direct proportion to the phase out of the aggregate cost of the RICm program. A phase out of the customer's positive or negative RICm will be in proportion to each other.

The phase out schedule applicable to customers with positive RICm Rates will be set in the BP-29 7(i) Process and fixed for the term of the contract. ~~As the phase out schedule materializes over forecasts change through~~ time, there will be differences in the aggregate RICm credits and RICm charges. Any such difference, positive or negative, will be allocated to the Composite Cost Pool.

1 **4.5.2.1 Calculation of RICm for New Publics**

2 A RICm will not be established for any New Public. Under no situation will an Existing
3 Public customer's RICm be changed as a result of the formation of a New Public.

4 **4.5.2.2 Calculation of RICm for Existing-Public to -Existing-Public Annexation**

5 A customer's RICm will not be recalculated for the Existing Public that is having its Tier 1
6 Load reduced due to annexation. The Existing Public gaining Tier 1 Load as a result of the
7 annexation will have its RICm recalculated based on the weighted average of its prior
8 annexation Tier 1 Load and associated RICm and the annexed Tier 1 Load and the RICm
9 associated with that load.

10
11 **4.5.2.3 Product Switching and RICm**

12 In the event a customer with a negative RICm (*i.e.*, the RICm reduces the amount the
13 customer pays BPA) switches products during the contract duration, their RICm will be
14 eliminated starting in the Rate Period the product switch becomes effective. In the event a
15 customer with a positive RICm (*i.e.*, the RICm increases the amount the customer pays BPA)
16 switches products during the contract duration, their RICm will remain unchanged from the
17 amounts and schedule as established through the BP-29 7(i) Process.

18
19 ~~4.6 — Other Tier 1 Charges~~

20 4.5.3 Rate Impact Credit, JOE (RICj)

21 The Rate Impact Credit for the JOE (RICj) phases in rate impacts attributed solely to
22 changes to the Tier 1 Demand Charge calculations particular to the JOE from TRM and
23 PRDM. The RICj credits the only JOE that paid rates under the TRM and is applicable only if
24 that JOE elects the Load Following Product. It is a stream of bill credits phased out over
25 time with a first-year bill credit that is calibrated to mitigate the rate impacts the JOE's
26 members would experience as a result of changing the method used to calculate the JOE's

1 demand Billing Determinant. The cost of the RICj would be allocated to the Non-Slice Cost
 2 Pool and would not impact any customer's Tier 1 Marginal Energy True-Up Rate. The RICj
 3 would be issued on the October bill of each Fiscal Year. The annual RICj is shown in Table 4-
 4 1.

5 **Table 4-1. RATE IMPACT CREDIT FOR THE JOE SCHEDULE**

<u>Fiscal Year</u>	<u>RICj Amount</u>
<u>2029</u>	<u>\$1,000,000</u>
<u>2030</u>	<u>\$933,333</u>
<u>2031</u>	<u>\$866,667</u>
<u>2032</u>	<u>\$800,000</u>
<u>2033</u>	<u>\$733,333</u>
<u>2034</u>	<u>\$666,667</u>
<u>2035</u>	<u>\$600,000</u>
<u>2036</u>	<u>\$533,333</u>
<u>2037</u>	<u>\$466,667</u>
<u>2038</u>	<u>\$400,000</u>
<u>2039</u>	<u>\$333,333</u>
<u>2040</u>	<u>\$266,667</u>
<u>2041</u>	<u>\$200,000</u>
<u>2042</u>	<u>\$133,333</u>
<u>2043</u>	<u>\$66,667</u>
<u>2044</u>	<u>\$0</u>

8 **4.6 Tier 1 Other Charges**

9 BPA will limit Tier 1 Rates and Charges to those detailed in this Chapter 4. These
 10 limitations pertain to the Core Rate Design charges and credits of the ~~PF rate design, which~~
 11 ~~include Tier 1 Energy Charges, Demand Charges, and PLVCs, PRDM~~ and do not encompass
 12 other adjustments, charges, credits, and special rate provisions (*e.g.*, customer-specific
 13 charges and credits, targeted adjustment charges, unauthorized increase charges,

1 conservation charges, credits, or surcharges), or any other charges or credits allowed under
2 Section 9.4.

3 These limitations do not apply to rate adjustments developed and assessed for risk
4 mitigation (*e.g.*, application of a Cost Recovery Adjustment Clause (CRAC)), new or modified
5 risk mitigation tools, or mid-Rate Period rate adjustments for cost recovery purposes.

6 Further, the PRDM does not in any way limit or constrain the way in which BPA recovers its
7 conservation costs from its customers — ~~for example within the PF Public Rate Pool, BPA
8 could adopt cost allocations for conservation-related charges, in a 7(i) Process. The revenue
9 associated with any conservation charges would be allocated to the Composite Cost Pool.~~

10
11 In addition, BPA may also, without revising the PRDM, impose separate rates for product
12 and service switching, which will be developed as needed in the applicable 7(i) Process. If,
13 notwithstanding the limitations expressed here, BPA or a party in a 7(i) Process wishes to
14 institute a new rate or charge, it may pursue a revision to this PRDM to reflect such new
15 rate or charge in accordance with the provisions in Chapter 9.

16 17 **4.7 Disaggregation of Risks within Tier 1 Non-Slice Products**

18 Except for the Core Rate Design charges defined above, the PRDM will not further sub
19 allocate risk-related costs ~~associated with risks across its Slice and Non-Slice~~between or
20 within products prior to September 30, ~~2044~~2041. This prohibition of a further sub
21 allocation of risk is limited to Tier 1 Rates and does not apply to any other rates, products,
22 or services that BPA may provide, such as Tier 2 Rates and other PF and non-PF rates,
23 products, and services. Any sub allocation of risk in Tier 1 Rates after September 30,
24 ~~2044~~2041, would be decided through a 7(i) Process. A proposal to change the
25 suballocation of risk in the Tier 1 Rates after September 30, ~~2044~~2041, in a 7(i) Process,
26 ~~shall~~will not be considered a revision to the PRDM.

1
2 During the public workgroups and workshops that facilitated the creation of the PRDM, a
3 concern was raised about risk and the potential that the allocation of risk across PF Public
4 customers purchasing power applicable to this PRDM may need to be evaluated at a more
5 granular level than Slice and Non-Slice. Customers discussed the allocation of risk to Load
6 Following differently than Block or by each utility's load characteristics. While the concept
7 was deemed plausible and may prove to be supported by the principle of cost causation, the
8 consensus was that there was not enough data, systems, and tools to effectively either
9 prove or disprove the merits of the concept, and linkage to rate design at this time. BPA
10 intends to initiate a public process in FY 2040 to FY 2041 that will be used to evaluate the
11 need to study the merits of the concept. The public process would determine if BPA would
12 conduct a study and, if so, the process would be used to establish the scope of the study,
13 confirm that the necessary data is available, and determine what data BPA would use to
14 complete the study. The study could be used to inform how BPA and customers will
15 proceed on this topic after September 30, 2044.

16 17 **4.8 Cashflow Considerations**

18 Because the Tier 1 ~~rate~~Rate design may result in within-year cash flow impacts to
19 customers, BPA may, if practicable, and consistent with BPA's statutory obligation to ensure
20 timely cost recovery, accommodate individual customer requests to reshape charges within
21 the Fiscal Year to mitigate adverse cash flow effects on the customer. Such reshaping of
22 charges must recover the same amount of dollars on a net present value basis within the
23 Fiscal Year as would have been recovered without the reshaping. The reshaping of the
24 payments must be mutually agreed upon by both BPA and the customer prior to the start of
25 the Rate Period. Absent agreement, the customer will pay the Tier 1 Energy Charges
26 without reshaping.

1
2 The reshaping of the Tier 1 Energy Charges will take into account the cash-flow impacts to
3 the customer of a forecast of Tier 1 Energy Charges; a forecast of Tier 1 Demand Charges;
4 and a forecast of Tier 1 Peak Load Variance Charges. The forecast cash-flow impacts to the
5 customer will be mitigated by including fixed dollar monthly credits and debits that
6 recover, in total, the same amount of dollars on a net present value basis. The fixed dollar
7 monthly credits and debits will not impact any rate or ~~billing determinant.~~Billing
8 Determinant. To accommodate reshaping requests, BPA will take into account the potential
9 offsetting impacts of multiple reshaping requests. BPA may prorate multiple reshaping
10 requests if necessary to avoid or mitigate material adverse impacts on BPA's cash flow.

1 **5 TIER 2 RATE DESIGN**

Chapter objectives: This chapter is largely a redline as opposed to a rewrite. These changes are driven by the overall Core Rate Design changes developed in the PRDM Public Process in 2024—and highlight several key revisions.

Consistent with the provisions below, the specific rate designs for BPA’s Tier 2 Rate Alternatives will be determined in each 7(i) Process.

6 BPA’s allocation of costs to the Tier 2 Cost Pools associated with the Tier 2 Rate Alternatives
7 will be subject to the provisions of this PRDM. The allocation of Tier 2 Costs and the design
8 of Tier 2 Rates will ensure to the maximum extent practical that the Tier 2 Rates will
9 recover the full allocated cost of BPA service to planned Above-CHWM Load. ~~The~~ Tier 1
10 System Resources will not be used in a manner that subsidizes the allocated costs of Tier 2
11 Rate service. All Tier 2 Cost Pools will include the marginal cost of meeting resource
12 planning requirements as well as include the marginal cost of providing any applicable
13 Support Services.

14
15 **5.1 Overall Tier 2 Construct**

16 Each customer will elect, in its CHWM Contract, how its Above-CHWM Load will be served
17 during the contract term. The customer will choose whether and how its Above-CHWM will
18 be served by electing the Tier 2 Long-Term ~~Tier 2~~ Path, the Tier 2 Flexible Above-CHWM
19 Path, or a combination of the two paths. Above-CHWM Load under the Tier 2 Long-Term
20 ~~Tier 2~~ Path is served by BPA under its Tier 2 Long-Term Alternative at the Tier 2 Long-Term
21 Rate. Above-CHWM Load under the Tier 2 Flexible Above-CHWM Path could be served by a
22 combination of the customer’s non-Federal resources, BPA’s Tier 2 Short-Term Alternative
23 at the Tier 2 Short-Term Rate, and BPA’s Tier 2 Vintage Alternatives at the applicable Tier 2
24 Vintage Rate.

1 BPA will establish only one Tier 2 Long-Term Rate for each year, and one Tier 2 Short-Term
2 Rate for each year. BPA may establish multiple Tier 2 Vintage Rates as BPA may provide
3 multiple distinct Tier 2 Vintage Alternatives within a year, and each would have its own rate
4 based on the cost of the resources specific to each distinct Tier 2 Vintage Alternative. Each
5 customer electing a particular Tier 2 Rate Alternative will pay the rate associated with the
6 Tier 2 Rate Alternative Service. Each Tier 2 Rate will be established to recover all the Tier 2
7 Costs allocated to that Tier 2 Rate Alternative plus any adders to account for real power
8 losses, overhead costs, other costs, and other services being provided from BPA to support
9 power sold at each Tier 2 Rate. BPA will establish Tier 2 Rates based on the cost of
10 providing a flat annual block of power.

11
12 Any Forecast Firm Inventory used to provide service at Tier 2 Rates will be priced at the
13 marginal value of such power, except Forecast Firm Inventory used to provide service at the
14 Tier 2 Long-Term Rate, which will be at a rate equivalent to BPA's Tier 1 Non-Slice Rates.
15 Forecast Firm Inventory will be used to provide service at the Tier 2 Long-Term Rate when
16 BPA has Forecast Firm Inventory, as determined in each 7(i) Process, and the Tier 2 Long-
17 Term Rate has an otherwise unmet power need.

18 19 **5.1.1 Setting Tier 2 Amounts**

20 The amount of power purchased by a customer under BPA's Tier 2 Rate Alternatives is for
21 each Rate Period will be established in the Above-CHWM Process consistent with each
22 customer's Above-CHWM Load elections. The Above-CHWM Process concludes before
23 Tier 2 Rates are set in the 7(i) Process. Above-CHWM Load served at Tier 2 Rates will be in
24 fixed, annual amounts on a take-or-pay basis for each Fiscal Year of a Rate Period. To
25 support operational convenience, a Load Following customer that elects would have a
26 portion of its Above-CHWM Load served under the Tier 2 Flexible Above-CHWM Path can

1 also elect to have up to 0.999 aMW of its Above-CHWM Load served through the Core Rate
2 Design as described in Chapter 4. The 0.999 aMW election would apply to the JOE and not
3 to each of the JOE's members.

4 5 **5.2 Tier 2 Cost Basis**

6 As described in Section 2.2.1.4, BPA will identify which of its costs are Tier 2 Costs and to
7 which Tier 2 Cost Pool the costs will be allocated for calculating each Tier 2 Rate in the
8 applicable 7(i) Process. Additionally, Section 3.6 contains guidance regarding the allocation
9 of specific resource costs.

10 11 **5.2.1 Tier 2 Cost Component Construct**

12 The costs included in each of the Tier 2 Cost Pools will be BPA's costs associated with
13 serving the customers who elect service at the corresponding Tier 2 Rate Alternative.

14
15 For a Tier 2 Rate Alternative based on block energy purchases from market sources, the
16 costs allocated to that Cost Pool will include costs that BPA incurs to serve load at a set, or
17 variable, price, with a combination of forward and spot purchases of block energy from the
18 market. When this type of Tier 2 Rate is set, BPA may not have made all the market
19 purchases needed to serve the loads at this rate. Consequently, this type of rate may be
20 comprised of both known and projected costs of the energy from market purchases, a risk
21 component to cover the expected risks of providing service at a set forward price (which
22 could take the form of some combination of ~~planned net revenues~~ Planned Net Revenues for
23 ~~risk~~ Risk (PNRR) and rate adjustments or true-ups), plus any adders to account for real
24 power losses, risk, overhead costs, and other costs being incurred and services being
25 provided by BPA to support power sold at that specific Tier 2 Rate. See Section 5.2.3 below
26 for the construct of the Overhead Cost Adder.

1 For a Tier 2 Rate Alternative based on non-dispatchable resources, the costs allocated to
2 that Tier 2 Cost Pool will include costs BPA incurs to serve load with a purchase of the
3 specific non-dispatchable resource. These types of costs may include the cost of the
4 resource purchase, transaction costs, the cost of providing ~~Resource~~ Support Services
5 ~~(RSS)~~, plus any adders to account for real power losses, risk, overhead costs, and other
6 costs being incurred or services being provided by BPA to support power sold at that
7 specific Tier 2 Rate. Transaction costs might include transmission and Balancing Authority
8 Area charges for within-hour balancing. Transaction costs may be known or be based on
9 projections that are trueed up after the fact. The cost of providing ~~RSS~~ Support Services
10 would be at the same rates as those that would be applied to a customer's purchase of a
11 non-dispatchable Non-Federal Resource to convert the resource delivery to the financial
12 equivalent of a flat annual block.

13
14 For a Tier 2 Rate Alternative based on dispatchable resources, the costs allocated to that
15 Tier 2 Cost Pool will include costs and risks that BPA incurs to serve load with a purchase of
16 a dispatchable resource, with the customer assuming the operational risks. These types of
17 costs include projected annual fixed costs (debt service and fixed ~~O&M~~ operations and
18 maintenance (O&M)) of the resource; the expected fuel and variable O&M costs of the
19 resource based on its expected operation; a mechanism to true up the expected fuel and
20 variable O&M costs to actual costs; the cost of operating reserves and replacement power
21 for outages; a mechanism to compensate the customer for any savings from economic
22 dispatch of the resource, including fuel remarketing proceeds; costs of transmission
23 services, if any, to transmit power to the federal system; transaction costs; plus any adders
24 to account for real power losses, risk, overhead costs, and other costs being incurred or
25 services being provided by BPA to support power sold at that specific Tier 2 Rate.

1 A Tier 2 Alternative Cost Pool can include combinations of market purchases and resource
2 costs, as described above. Tier 2 Rates can be fixed for a Rate Period or be subject to true-
3 ups, surcharges, and other adjustments to support collecting BPA's cost of providing a
4 Tier 2 Rate Alternative from the customers who elect service at the corresponding Tier 2
5 Rate Alternative.

6 7 **5.2.2 Resource Tier 2 and Support Services**

8 Tier 2 Rates based on the costs of resources acquired by BPA to serve Above-CHWM Loads
9 will include appropriate RSSSupport Services charges necessary to price the service as if
10 the resource output is serving a flat annual load. RSSSupport Services supplied by BPA for
11 resources serving loads at Tier 2 Rates will ensure energy neutrality, and RSSSupport
12 Services capacity-related charges will compensate the Composite Cost Pool for the value of
13 the RSSSupport Services and for risk exposure incurred due to the provision of RSS.
14 RSSSupport Services. Support Services may include energy-related and other charges. The
15 revenue from these other charges will be allocated to the Cost Pool based on cost causation
16 principles, such as allocating RSSSupport Services energy-related charges to the Non-Slice
17 Cost Pool if BPA's Balancing Power Purchases ~~cost~~costs, which are also allocated to the Non-
18 Slice Cost Pool, are being impacted as a result of BPA providing RSSSupport Services. The
19 forecast costs for RSSSupport Services used to calculate each Tier 2 Rate will be set in each
20 7(i) Process for each Rate Period.

21 22 **5.2.3 Tier 2 Overhead Cost Adder**

23 Each Tier 2 Cost Pool will include an Overhead Cost Adder. This adder will provide an
24 offset to the Composite Cost Pool for the general and administrative (overhead) costs
25 associated with BPA's provision of power at Tier 2 Rates. In each 7(i) Process, BPA will
26 propose an Overhead Cost Adder to be applied to all power sold at Tier 2 Rates

1 (mills/kWh). The adder will be set at a level that will reasonably compensate the
2 Composite Cost Pool for the costs of providing the service, which BPA expects would be
3 comparable to typical electricity broker fees.
4

5 **5.3 Tier 2 Remarketing of Tier 2 Amounts**

6 If BPA remarkets a customer's Tier 2 purchase obligation pursuant to the CHWM Contract,
7 then BPA will credit the proceeds to such customer (net of any remarketing costs as
8 described in ~~Section 6.4.1~~ to such customer the next section). The customer must continue
9 to pay for the entire purchase at the appropriate Tier 2 Rate.
10

11 **5.3.1 Calculating the Remarketed Tier 2 Rate Proceeds**

12 If BPA remarkets for a customer any Tier 2 Rate Alternative purchase obligation, the
13 proceeds (as established below) obtained from such remarketing will be netted against the
14 customer's monthly bill. BPA will calculate the applicable rate, ~~or rates,~~ (s) used to calculate
15 the proceeds for the remarketed energy in each 7(i) Process. The total proceeds of the
16 remarketed energy will be reduced for aggregated transaction costs, including, but not
17 limited to, such costs as broker or other marketing fees, transmission costs, transmission
18 losses, and odd lot remarketing costs. Transaction costs also could include a risk
19 component or adjustment mechanism for the risk associated with the potential difference
20 between forecast and actual market prices.
21

22 The customer will remain responsible for paying any charges and adjustments that
23 otherwise would have been paid had BPA not had to provide remarketing. Remarketing of
24 Tier 2 Rate Alternative purchase obligation amounts that include a transfer of Renewable
25 Energy Credits (RECs) to the customer under the customer's CHWM Contract will not affect

1 any transfer of RECs to the customer associated with such amounts. This procedure will be
2 applied whether or not BPA actually remarkets the power or uses it for its own purposes.

3 4 **5.4 Tier 2 Long-Term Alternative**

5 **5.4.1 Tier 2 Long-Term Change Fee and Charge**

6 Pursuant to the terms in the customer's CHWM Contract, a customer may elect to change
7 (cap or reduce) its Tier 2 Long-Term Alternative election. A Tier 2 Change Fee and a Long-
8 Term Tier 2 Change Charge will apply if this change in original election is made 1) after
9 BonnevilleBPA acquires power for the purposes of serving Tier 2 Long-Term Tier 2 Path
10 obligations, or 2) after July 31, 2027, whichever occurs first. The Tier 2 Change Fee will be
11 established in each 7(i) Process and ~~shall~~will be no lower than 0.05 mills/kWh and no
12 higher than 0.10 mills/kWh applied to the customer's Tier 1 Load amount for the
13 ~~remaining term of Rate Period immediately following the CHWM Contract. election.~~

14
15 The Long-Term Tier 2 Change Charge will be based on costs BPA determines would
16 otherwise be spread to other Tier 2 Long-Term Tier 2 Path customers, calculated
17 independent to and without consideration of the Tier 2 Change Fee, as a result of the
18 change in election. The revenue received from the Tier 2 Change Fee and the Long-Term
19 Tier 2 Change Charge will be credited to the Tier 2 Long-Term Cost Pool.

20 21 **5.4.2 Tier 2 Long-Term Cost Reallocation Provision**

22 If the Tier 2 Long-Term Cost Pool contains costs and BPA has no load being served at the
23 Tier 2 Long-Term Rate, BPA will reallocate such costs to all customers that elected any
24 portion of their potential Above-CHWM Load to be served under the Tier 2 Long-Term
25 Alternative. This reallocation will be spread across all such customers' Rate Period forecast
26 Tier 1 Energy Charge Billing Determinants.

1 Similarly, if a subset of customers that elected BPA's Tier 2 Long-Term Alternative are
2 determined to be bearing an inequitable amount of the costs allocated to the Tier 2 Long-
3 Term Cost Pool, BPA will determine, through the 7(i) Process, the portion of the Tier 2
4 Long-Term Cost Pool to be reallocated to all customers that elected any portion of their
5 potential Above-CHWM Load be served under the Tier 2 Long-Term Alternative. This
6 reallocation will be spread across all such customers' Rate Period forecast Tier 1 Energy
7 Charge Billing Determinants.

8 9 **5.5 Starting the Process for Establishing a Tier 2 Vintage Alternative**

10 ~~When BPA determines it will attempt to make an acquisition of the output of a physical~~
11 ~~resource to meet its load obligations for a period that extends beyond a three year period,~~
12 ~~BPA will notify customers with a CHWM Contract at least 60 calendar days prior to making~~
13 ~~its Request For Offer (RFO). The intent of this notice is to facilitate the potential creation of~~
14 ~~a Tier 2 Vintage Alternative by allowing a CHWM Contract customer an opportunity to~~
15 ~~identify its interest in creating a Tier 2 Vintage Alternative from the same RFO. The~~
16 ~~maximum amount of power a customer can request to purchase under a Tier 2 Vintage~~
17 ~~Alternative would be set equal to its annual maximum forecast of the customer's future~~
18 ~~Above-CHWM Load; subject to the Flexible Above-CHWM Path less any non-Federal~~
19 ~~resources serving that Above-CHWM Load. Pursuant to the terms in the customer's CHWM~~
20 ~~Contract, a customer may elect to serve its Above-CHWM load under the Tier 2 Flexible~~
21 ~~Above-CHWM Path. Included in the Tier 2 Flexible Above-CHWM Path is the eligibility to~~
22 ~~purchase power at a Tier 2 Vintage Rate.~~

23
24 A Tier 2 Vintage Rate will be established when BPA acquires a Vintage Resource(s)
25 pursuant to the terms of the customer's CHWM Contract. The Tier 2 Vintage Rate will be
26 based on the costs of the Vintage Resource(s) along with any associated services or costs.

1 The applicable Tier 2 Vintage Rate determined by BPA shall be restated in the Statement of
2 Intent as described in the CHWM Contract.

3
4 When a customer purchases power under a Tier 2 Vintage Alternative that is in excess of its
5 then current Above-CHWM Load, BPA ~~would~~may treat such power as either: 1) ~~an~~
6 ~~advanced~~a sale of surplus power sold at a surplus rate equivalent to the applicable Tier 2
7 Vintage Rate to be managed by the customer; or 2) excess power to be managed by BPA
8 through a remarketing service, ~~(see Section 5.3,)~~ until the customer's load grows into its
9 Tier 2 Vintage amount, as determined by BPA.

10
11 ~~The contract facilitating the Tier 2 Vintage Alternative~~A formula or other special rate
12 provision will ~~establish BPA's and the customer's obligations as well as the~~be established in
13 each 7(i) Process to address applicable credits and charges, ~~such as that may result~~ when
14 power delivery under a Tier 2 Vintage Alterative begins within a Fiscal Year and when
15 power delivery occurs earlier or later than planned.

6 RESOURCE SUPPORT SERVICES

Chapter objectives: This chapter focuses on pricing and moves service descriptions previously in the TRM document. This chapter intends to link RSS-related capacity component pricing to a marginal capacity cost, and link energy components to a market price determined in each 7(i) Process to allow flexibility to adjust to appropriate indices and timeframes.

Resource Support Services (RSS) are offered under the CHWM Contract, and include multiple services ~~to~~ integrate that assist in the integration of Federal and non-Federal resources with load service. RSS Support

8 Services are available for all specified

9 Non-Federal Resources that Load Following customers contractually dedicate to serve their
10 Total Retail Load (TRL_r), and for specified new renewable resources Block customers
11 contractually dedicate to serve their TRL.

13 6.1—Support Services include both Resource Support Services (RSS Pricing 14 Principles

15 RSS will be priced comparably across Load Following) and Block products. Other Support
16 Services (OSS). RSS may include, but ~~is are~~ not limited to, providing scheduling services,
17 curtailment management services, forced outage services, services providing additional
18 Federal capacity to help the customer meet its contractual obligations with BPA, or services
19 to firm up variable generation. Generally speaking OSS may include but are not limited to
20 scheduling services, curtailment management services, and/or market integration related
21 services. See Appendix D for the overall framework of Support Services.

23 6.1 Support Services Pricing Principles

24 Support Services will be priced comparably across Load Following and Block Products.
25 With one exception, the capacity component of each Resource Shaping Support Service will
26 be priced at a marginal cost of capacity, such as the Marginal Capacity Resource used to set

1 the Tier 1 Demand Rates, and any applicable energy components will be priced at a
2 market-based price of energy for the appropriate time period for the particular ~~RSS service.~~
3 Support Service. The exception to the marginal cost of capacity pricing is for contractually
4 required Resource Support Services applied to Existing Resources. In this situation, the
5 capacity-based fee will be calculated using BPA's embedded cost of Supplemental
6 Operating Reserves, or its successor, adjusted to reflect the Tier 1 System Resources only.

7
8 Other costs, such as the cost of providing scheduling services, could be based on relevant
9 portions of BPA's Revenue Requirement or on the cost charged by other entities to provide
10 a similar service.

11
12 The price of capacity, the price of energy, and the allocation of any other costs for
13 ~~RSS~~Support Services offered by BPA will be determined in each 7(i) Process. The revenue
14 received from providing ~~RSS~~Support Services will be allocated to the Cost Pool based on
15 cost causation principles——such as allocating capacity-related revenue to the Composite
16 Cost Pool to compensate for the associated Designated System Obligation, or to the Non-
17 Slice Cost Pool to offset impacts to BPA's Balancing Power Purchases ~~cost~~costs that are
18 otherwise allocated to the Non-Slice Cost Pool.

19
20 **6.2 Treatment for Load Following Non-Dispatchable Dedicated Resources**
21 **that are Existing Resources ~~and that are~~ but Not Variable Energy**
22 **Resources**

23 BPA will apply a Forced Outage Reserves Service (FORS)-based fee to all Load Following
24 customer's Non-Dispatchable Dedicated Resources that are Existing Resources ~~and that~~
25 ~~are~~but not Variable Energy Resources. The capacity-based fee will be calculated using
26 BPA's embedded cost of Supplemental Operating Reserves, or its successor, adjusted to

1 reflect the Tier 1 System Resources only. The FORS-based fee allows an Existing Resource
2 dedicated to a Load Following customer's load that is Non-Dispatchable and not a Variable
3 Energy Resource to produce generation below its Contract Exhibit A amounts under
4 conditions defined in the CHWM Contract (such as MWh/megawatthour limits, frequency of
5 occurrence, qualifying events, and notice requirements) and pay a market-based rate
6 (inclusive of potential upward adjustments and other costs), as established in each 7(i)
7 Process.

8
9 The FORS-based fee also allows eligible resources, as defined by the CHWM Contract, to
10 receive a market-based energy credit (inclusive of potential downward adjustments and
11 other costs), as established in each 7(i) Process, for amounts of energy produced by the
12 resource in excess of its Exhibit A amounts. To avoid double counting, only the Exhibit A
13 amounts will be used for purposes of calculating billing determinantsBilling Determinants
14 as described in Chapter 4 of thethis PRDM.

16 **6.3 Treatment for Load Following Non-Dispatchable Dedicated Resources** 17 **that are Existing Resources and ~~that~~ are Variable Energy Resources**

18 BPA will apply a capacity-based fee to all Load Following customer's Non-Dispatchable
19 Dedicated Resources that are both Existing Resources and ~~that are~~ Variable Energy
20 Resources. The capacity-based fee will be calculated using BPA's embedded cost of
21 Supplemental Operating Reserves, or its successor, adjusted to reflect the Tier 1 System
22 Resources only. The capacity-based fee allows BPA to treat the resource as a firm resource
23 for purposes of the Tier 1 Demand Charge, as described in Section 4.3. It also allows an
24 Existing Resource dedicated to a Load Following customer's load that is Non-Dispatchable
25 and a Variable Energy Resource to produce generation below its Exhibit A amounts and pay

1 a market-based rate (inclusive of potential upward adjustments and other costs), as
2 established in each 7(i) Process.

3
4 The capacity-based fee also allows eligible resources, as defined by the CHWM Contract, to
5 receive a market-based energy credit (inclusive of potential downward adjustments and
6 other costs), as established in each 7(i) Process, for amounts of energy produced by the
7 resource in excess of its Exhibit A amounts. The capacity-based fee will be calculated using
8 BPA's embedded cost of Supplemental Operating Reserves, or its successor, adjusted to
9 reflect the Tier 1 System Resources only.

10
11 ~~The capacity-based fee will be calculated using BPA's embedded cost of Supplemental~~
12 ~~Operating Reserves, or its successor, adjusted to reflect the Tier 1 System Resources only.~~

13
14 To avoid double counting, only the Exhibit A amounts will be used for purposes of
15 calculating ~~billing determinants~~Billing Determinants as described in Chapter 4 of this
16 PRDM.

18 **6.4 Treatment for Load Following Dispatchable Dedicated Resources that are** 19 **Existing Resources**

20 BPA may apply credits, charges, and require a Load Following ~~Customer~~customer to
21 purchase ~~Resource~~-Support Services for Dispatchable Dedicated Resources that are
22 Existing Resources. The purpose of the credits, charges, and services is to ensure, facilitate,
23 or help a customer meet its contractual obligations with BPA, while also capturing the
24 dispatchable energy and capacity value of the resource. A Load Following
25 ~~Customer's~~customer's Dispatchable Dedicated Resources that are Existing Resources will

1 **7 RISK MITIGATION**

Chapter objectives: Broad principles remain from the TRM.

In each 7(i) Process, BPA will establish risk mitigation mechanisms and set rates that are consistent with

4 BPA's then-current agency financial risk standard(s), as set out in BPA's then-current financial plan and policies.

5
6
7
8 The CHWM Contract includes take-or-pay provisions that obligate each customer to pay its
9 monthly BPA power bills calculated using the Tier 1 and Tier 2 Rates applicable to each
10 customer.

11
12 **7.1 Risk in Tier 1 Risk**

13 In each 7(i) Process, BPA will assess the risks related to the costs and revenues allocated to
14 the Tier 1 Cost Pools, design risk mitigation measures, and set the Tier 1 Rates to meet
15 BPA's risk standard(s). Such measures may include PNRR, Cost Recovery Adjustment
16 Clauses (CRACs), true-ups to actual costs, and other measures determined appropriate by
17 BPA.

18
19 The primary financial risk mitigation measures for the Slice Product are the transfer of the
20 net secondary revenue risk to Slice purchasers (by providing them with secondary energy
21 instead of a rate credit for anticipated net secondary revenues) and the Slice True-Up (see
22 Section 2.7).

7.2 Tier 2 Risk

Risks in Tier 2 will be assessed in each 7(i) Process, both for each Tier 2 Rate Alternative and collectively for all Tier 2 Rate Alternatives, to determine if the terms and conditions have mitigated such risks sufficiently to meet BPA's risk standards. In addition to such terms and conditions, BPA will include in Tier 2 Rates any supplementary risk mitigation necessary to meet BPA's risk standards. Altogether, Tier 2 risk mitigation will be structured so that the risk associated with Tier 2 Rates will not increase the costs allocated to Tier 1 Cost Pools or require any enhancement of Tier 1 risk protection mechanisms beyond what would have been required absent sales at Tier 2 Rates. BPA recognizes that it may be limited in Tier 2 Rate offerings by the foregoing requirements that Tier 2 risks not increase costs allocated to Tier 1 or require enhancement of Tier 1 risk protections.

In each 7(i) Process, when there is more specificity about the resource and purchase costs allocated to the various Tier 2 Cost Pools, BPA will assess the risks of providing service at the various Tier 2 Rate Alternatives. BPA will propose risk mitigation tools for each Tier 2 Cost Pool (e.g., ~~Planned Net Revenues for Risk (PNRR)~~, CRACs, and true-ups to actual costs), as appropriate.

~~7.1 Risk in Tier 1~~

~~In each 7(i) Process, BPA will assess the risks related to the costs and revenues allocated to the Tier 1 Cost Pools, design risk mitigation measures, and set the Tier 1 Rates to meet BPA's risk standard(s). Such measures may include PNRR, CRACs, true-ups to actual costs, and other measures determined appropriate by BPA.~~

~~The primary financial risk mitigation measures for the Slice Product are the transfer of the net secondary revenue risk to Slice purchasers (by providing them with secondary energy~~

1 ~~instead of a rate credit for anticipated net secondary revenues) and the Slice True-Up (see~~
2 ~~Section 2.7 for more information).~~

3
4 **7.27.3 Assessment of Aggregate Risk**

5 If, after assessing and mitigating risks for each Tier 1 Cost Pool and Tier 2 Cost Pool ~~and for~~
6 ~~Tier 1 Cost Pools~~, BPA finds that Power function risks have not been adequately mitigated
7 pursuant to BPA's risk standards, then BPA will allocate the remaining risk and any
8 additional mitigation between the tiers in the applicable 7(i) Process, consistent with this
9 PRDM.

8 OTHER RATE DESIGN

~~Chapter objectives: This chapter is largely unchanged from the TRM. Specific changes are made to eliminate the application of the LDD to the A-CHWM “gross up” amount. Also, the discussion of the discounts removes reference to a TOCA billing determinant.~~

This chapter identifies and describes ~~certain other public ancillary PF rates linked to Tier 1 not otherwise described in Chapters 4 and Tier 2 in addition to other Core Rate Design rates.~~⁵ These

~~rates~~ include: Rates for Unanticipated Load, Low Density Discount, Irrigation Rate Discount, and PF Exchange.

8.1 Rates for Unanticipated Load

BPA will develop rates in the applicable 7(i) Process for service to unanticipated loads (*e.g.*, due to delay in the start-up of a specified new Non-Federal Resource). Unanticipated loads are public preference loads that BPA is obligated to serve under its statutes, but of which BPA has not had the notice to serve as required by the CHWM Contract or General Rate Schedule Provisions (GRSPs) for a customer to receive service at Tier 1 or Tier 2 Rates. The GRSPs developed in the applicable 7(i) Process will establish the terms and conditions for application of these rates. ~~These rates, which~~ are intended to reflect the costs associated with the power and services needed to serve such load.

Load that BPA does not have an obligation to serve may face an unauthorized increase (UAI) charge. For example, if a customer does not provide for serving load when a Non-Federal Resource has an outage, and BPA delivers power, such power deliveries would be charged the UAI.

8.2 Low Density Discount

In the applicable 7(i) Process, BPA will apply a long-term Low Density Discount (LDD) that will remain in effect for multiple Rate Periods to the extent permitted by Section 7(d)(1) of the Northwest Power Act. The LDD benefit to a JOE will be equivalent to the sum of LDD benefits calculated for all eligible individual members of the JOE. BPA will determine the LDD for the JOE based on each such individual utility member's LDD amount.

The LDD will apply to the following Tier 1 charges: Tier 1 Composite ~~Tier 1~~ Energy Charge, the Tier 1 Non-Slice ~~Tier 1~~ Energy Charge, ~~The Slice~~ the Tier 1 Slice Energy Charge, the Tier 1 Demand Charge, and the Tier 1 Peak Load Variance Charge. LDD will not apply to purchases of power for Above-CHWM Load. The cost of the LDD program will be allocated to the Composite Cost Pool. The discount will be determined using the LDD Percentage Discount Table, as published in the applicable GRSPs.

In the applicable 7(i) Process, BPA will apply an LDD Percentage Discount Table that is the same as or similar to the example in Attachment B Appendix C. The table will be formulated so that the resulting LDD program cost is forecast to be between \$42 million and \$44 million on average per year during the BP-29 Rate Period. This program cost may include utility-specific adjustments intended to temporarily mitigate a loss in program benefits to a utility deemed to be materially impacted by the change in LDD methodology from the TRM to the PRDM. This program cost above is comparable to the program costs prior to the effective date of the PRDM.

The eligibility requirements of C/M (consumers per mile of line) and K/I (kWh to investment ratio) will initially be calculated in the same manner as was the case in BP-26 Rate Period. BPA may, in a later 7(i) Process, propose changes to the eligibility

1 requirements, LDD Percentage Discount Table, and definitions. Additionally, the
2 definitions in the GRSPs may be adjusted to accommodate changes to distribution systems,
3 including underground distribution lines, where appropriate.
4

5 **8.3 Irrigation Rate Discount**

6 Beginning with the ~~FY 2029~~BP-29 Rate Period and continuing through the term of the
7 CHWM Contracts, BPA will include an Irrigation Rate Discount (IRD) in BPA's wholesale
8 power 7(i) Process initial rate proposals in the form of a fixed percentage discount on the
9 Tier 1 Rates. Eligible irrigation loads will be identified in a customer's CHWM Contract and
10 will not increase during the term of the contract. The discount will not apply to loads
11 served at Tier 2 Rates.
12

13 The IRD benefit to a JOE will be equivalent to the sum of IRD benefits calculated for all
14 eligible individual members of the JOE. BPA will determine the IRD benefit for the JOE
15 based on each such individual utility member's IRD benefit.
16

17 In the ~~applicable~~BP-29 7(i) Process, BPA will ~~apply a~~calculate the fixed IRD percentage that
18 will remain for the term of the ~~contract~~CHWM Contract. The IRD percentage will be set by
19 calculating the value ~~which~~that will result in a program cost of approximately \$22 million
20 in FY 2029, when applied to eligible irrigation loads in that year. This program cost above
21 is comparable to the program costs prior to the effective date of the PRDM.
22

23 Each Rate Period, BPA will use the IRD percentage to set a mills/kWh discount rate, that,
24 when applied to qualified irrigation load, produces a dollar credit on eligible customers'
25 power bills. The percentage will be multiplied by the sum of the forecast revenue that
26 irrigation loads will pay through ~~the~~ Tier 1 ~~Charges~~Rates, adjusted for any applicable LDD,

1 divided by the sum of the irrigation loads (expressed in kWh) to derive the mills/kWh
2 discount. This discount will be seasonally available to qualifying loads during May, June,
3 July, August, and September.
4

5 The CHWM Contract will include the terms and conditions for the IRD. The CHWM
6 Contract also will specify quantities, definitions, and conditions for a qualifying irrigation
7 load. The discount rate to be applied to qualifying irrigation loads for the relevant Rate
8 Period will be determined in the applicable 7(i) Process and will be included in the
9 applicable GRSPs.
10

11 BPA will include in the FY 2029 proposed GRSPs the eligibility criteria for the IRD. To
12 qualify for the IRD, the customer must meet one of the following criteria:

- 13 1) The customer must have participated in BPA's IRD program in FY 2028.
- 14 2) At least 75 percent of the customer's Total Retail Load must be placed on BPA
15 starting October 1, 2028, and the customer's irrigation rate schedule sales, May
16 through September in FY 2018-2022, divided by its TRL for FY 2018-2022, is at
17 least 5 percent; or, if less than 5 percent, the average ~~kWh use~~kilowatts used for
18 May through September in FY 2018-2022 (25 months/5 years) is 7,500,000 kWh or
19 more.
20

21 Eligibility evaluation will be determined differently for existing and newly eligible
22 Irrigation Rate customers. Eligibility evaluation for existing IRD customers will occur at
23 signing of the ~~Power~~CHWM Contract. Eligibility for new Irrigation Rate customers will be
24 evaluated 90 calendar days after BPA issues the final PRDM ROD in 2025. Newly eligible

1 IRD customers' ~~Power~~CHWM Contracts will be amended to reflect the eligible
2 ~~kWh~~kilowatthour amounts.

3
4 For a Slice customer, BPA will apply the percentage reduction to the lesser of the
5 customer's qualifying irrigation load (~~kWh~~kilowatthours) specified in its CHWM Contract
6 or the sum of its monthly Block purchase at Tier 1 Rates plus the monthly Firm Slice
7 Amount. No other charges or ~~billing determinants~~Billing Determinants will be affected.

8
9 There will be a true-up process at the end of each year's May through September irrigation
10 season to ensure that the customer experienced the full amount of irrigation load stated in
11 the CHWM Contract. If a customer's May through September measured irrigation load is
12 less than the amount of load eligible for mitigation, a true-up calculation will determine the
13 amount the customer owes BPA at end of the irrigation season. The details and
14 requirements of the true-up will be described in the applicable 7(i) Process and included in
15 the GRSPs for each applicable Rate Period.

16
17 BPA will require IRD participating customers to implement cost-effective conservation
18 measures on eligible irrigation systems in their service territories, as described in the
19 GRSPs. The conservation measures may be eligible for future BPA conservation programs;
20 the amount of BPA support will be determined through the 7(i) Process.

21 22 **8.4 Section 7(b)(2) Rate Test**

23 **8.4.1 PF Exchange Rate for Customers with CHWM Contract**

24 The PF Exchange Rate is not applicable to PF customers with a CHWM Contract.
25

9 PRDM REVISION PROCESSES AND DISPUTE RESOLUTION

~~Chapter objectives: Combined TRM Chapters 12 and 13. Retained process for Improvements and Unintended Consequences. Mini-Trial for scope of Cost Recovery/Court Ruling, Irreconcilable Conflict within 7(i), and Irreconcilable Conflict outside 7(i).~~

In this Chapter 9:

- **Customer** means a Public that purchases power from BPA at a Tier 1 Rate under a CHWM Contract.
- **Customer Group** means a group

6
7 comprised of not less than 45 percent of the Customers (utility count) or 45
8 percent of the sum of the CHWMs.

9
10 For purposes of calculating utility count for a Customer Group or under Sections 9.2.2.2,
11 9.3.2.2, 9.4.2.2, 9.5.2, or 9.5.3, a JOE is counted by its component utilities.

9.1 General Provisions

9.1.1 Process Generally Applicable to Any PRDM Revision

14 No revision to ~~the~~this PRDM may be made without the introduction, consideration, and
15 adoption of such revision in a 7(i) Process. BPA will comply with the applicable
16 requirements of this ~~Section~~Chapter 9 when proposing revisions to the PRDM. ~~In the event~~
17 ~~that~~Should a proposed revision to the PRDM ~~has~~ not satisfied the requirements for
18 introduction in a 7(i) Process as set out herein, then BPA shall neither propose nor adopt
19 such proposed revision in a 7(i) Process until the applicable requirements of ~~Section~~this
20 Chapter 9 are satisfied.

22
23 Except as provided in ~~Section~~Sections 9.2 (Improvements/Enhancements) and 9.3.2
24 (Unintended Consequences that affect only Customers), nothing in this Chapter 9 limits the
25 positions that a Customer may advocate in a 7(i) Process regarding the PRDM. Nothing in

1 Chapter 9 either 1) precludes any party to a BPA 7(i) Process, other than a Customer, from
2 making any proposal or offering any testimony or other evidence on any matter that may
3 otherwise be raised in a BPA 7(i) Process or 2) constrains any person or entity, including a
4 Customer, from taking any position with BPA on any issue outside of a 7(i) Process.
5

6 **9.1.2 Core Provisions of the PRDM that May be Revised Only to Ensure Cost** 7 **Recovery or Comply with Court Ruling**

8 The provisions of the PRDM identified below cannot be revised except and unless the
9 Administrator determines in accordance with the applicable procedures set forth in this
10 SectionChapter 9 that BPA cannot otherwise timely recover its costs or that the change is
11 necessary to effectively comply with a court ruling:

- 12 1) The ~~basic Tier 1~~ Core Rate Design described in SectionChapter 4,
13 consisting of the concept of three Tier 1 Energy Charges (Composite, Slice, and
14 Non-Slice); the Tier 1 Marginal Energy True-Up~~;~~; the Tier 1 Demand Charge; the
15 Tier 1 Peak Load Variance Charge; and Tier 1 Credits, which include the RIC~~c~~,
16 RICm (including the RICm phase-out schedule established pursuant to Section
17 4.5.2), and ~~RICm~~ RICj (including the RICm phase-out schedule established
18 pursuant to Section 4.5.3).
- 19 2) The establishment of Tier 2 Rates, as set forth in Chapter 5.
- 20 3) Cost allocation principles set forth in Section 2.1.

21 22 **9.1.3 Actions Not Considered to be a Revision to the PRDM**

23 TheSubject to Section 9.1.2 and the express terms of the PRDM, the Administrator reserves
24 the discretion he or she otherwise possesses under law to establish, undertake, or

1 otherwise address the following, including through implementation of the PRDM consistent
2 with the terms thereof for those matters governed by the PRDM, in appropriate cases:

- 3 1) Calculation of actual rate levels.
- 4 2) Any rate issues or, as applicable, such components of rates issues that are
5 identified in this PRDM ~~that areas~~ specifically reserved for determination in a
6 future 7(i) Process. These include, but are not limited to:
 - 7 a) Allocation of costs consistent with Sections 2.1, 2.2, and 2.3 and the Allocated
8 Tiered Cost Table, Table 2-1
 - 9 b) The determination whether a line item in the Composite Cost Pool is subject
10 to true-up (*see* Chapter 2).
 - 11 c) The addition of new Tier 2 cost pools (*see* Section 2.2).
 - 12 d) Methods used to solve for Tier 1 and Tier 2 Rates (*see* Section 2.2.1)
 - 13 e) Modifications to BPA's Power Services Statement of Revenues and Expenses
14 (*see* Section 2.2.2)
 - 15 f) Allocations of New Expenses and New Credits (*see* Sections 2.3 and 2.7.38.4)
 - 16 g) Proposals to reallocate portions of the Tier 1 Secondary Energy Credit to
17 Composite Cost Pool (*see* Section 2.4)
 - 18 h) Proposals for an alternative cost recovery mechanism (*see* Section 2.6)
 - 19 i) True-up of rate revenue credits (*see* Section 2.7.18.2.2)
 - 20 j) Revisions to MRNR treatment (*see* Section 2.7.18.2.23)
 - 21 k) Expenses and revenue credits (*see* Section 2.7.38.4)

- 1 l) Resources considered Tier 1 System Resources and respective firm power
2 (see Section 3.1)
- 3 m) ~~Adding~~ Designated System Obligations and related issues (see Sections 3.2.2
4 and 3.2.3)
- 5 n) Forecasts of Rate Period ~~P~~ Augmentation (see Section 3.3)
- 6 o) The determination whether forecast costs of augmentation are subject to the
7 Slice True-Up (see Section 3.3.2).
- 8 p) Forecasts of Balancing Power Purchases and adjustments (see Section 3.4)
- 9 q) Updates to Table 3-3, 3-4, and 3-5 (see Section 3.5, 3.6, and 3.7)
- 10 r) Establishment of Tier 1 Energy Charges (see Section 4.1)
- 11 s) Establishment of Tier 1 Composite ~~Tier 1~~ Energy Rates (see Section 4.1.2)
- 12 t) Establishment of Tier 1 Non-Slice ~~Tier 1~~ Energy Rate (see Section 4.1.3)
- 13 u) ~~Slice~~ Establishment of Tier 1 ~~Slice~~ Energy Rate (see Section 4.1.4)
- 14 v) Establishment of Tier 1 Marginal Energy True-Up Rate (see Section 4.2.3)
- 15 w) Adjustments to Marginal Capacity Resource and shape of monthly Tier 1
16 Demand Rates (see Section 4.3.4)
- 17 x) Establishment of Capacity ~~Credit~~ Credits (see Section 4.3.6)
- 18 y) Capacity planning standards, PLVC ~~billing determinants~~ Billing Determinants,
19 and market-based energy rate (see Section 4.4)
- 20 z) RICc recalculations (see Section 4.5.1.1)
- 21 aa) Rates for New Publics (see ~~Sections 4.5.1.2 and Section~~ Section 4.5.1.2)
- 22 ~~ab) RICm phase-out schedule (see Section 4.5.2)~~

- 1 ~~aeab)~~ Recovery of conservation costs and rates for product and service
2 switching (*see* Section 4.6)
- 3 ~~adac)~~ Sub-allocation of risk in Tier 1 Rates after September 30, 2041
4 (*see* Section 4.7)
- 5 ~~aead)~~ Forecast costs for RSSSupport Services (*see* Section 5.2.2.2)
- 6 ~~afae)~~ Determination of the Overhead Cost Adder to Tier 2 Cost Pools
7 (*see* Section 5.2.3)
- 8 ~~agaf)~~ Calculations for remarketed energy (*see* Section 5.3.1)
- 9 ~~ahag)~~ Tier 2 Long-Term Change Fee and Charge(*see* Section 5.4.1)
- 10 ~~aiah)~~ Design, pricing, and application of the RSSSupport Services rates (*see*
11 ~~Section~~Chapter 6)
- 12 ~~ajai)~~ FORS-based fee (*see* Section 6.2)
- 13 ~~akaj)~~ Risk mitigation (consistent with Chapter 7)
- 14 ~~alak)~~ Rates for Unanticipated Load (*see* Section 8.1)
- 15 ~~am)Applicableal) Applicability~~ of Low Density Discount (*see* Section 8.1.2)
- 16 ~~anam)~~ Irrigation Rate Discount (*see* Section 8.2.3)
- 17 ~~ao)an)~~ PF Exchange Rate treatment for customers that execute non-CHWM
18 ~~contracts~~ (*see* Section 8.3.2.4)
- 19 ~~apao)~~ Application of Sections 7(b)(2) and 7(b)(3) of the Northwest Power
20 Act (*see* Section 8.4.3.3)

21 3) PRDM Exhibits will be filled in and revised consistent with the terms of the PRDM.

1 4) Such other actions described in the PRDM that are to be determined in a Section 7(i)
2 Process.

3
4 The actions described in this Section 9.1.3 do not constitute a “revision” to the PRDM.
5

6 **9.2 Improvements and Enhancements**

7 **9.2.1 Criteria and Conditions for Improvements and Enhancements**

8 Revisions to the PRDM not covered by Section 9.4 (Cost Recovery/Court Ruling), 9.1.2
9 (Core Provisions), or 9.3 (Unintended Consequences) and that are proposed by BPA or a
10 Customer Group to improve and enhance the PRDM ~~{“Improvement Proposal”}~~ must be
11 made consistent with this Section 9.2.
12

13 **9.2.2 Process for Improvements and Enhancements**

14 BPA or a Customer Group may propose a revision to the PRDM as provided for in
15 Section 9.2.1 only after complying with the requirements of this Section 9.2.2.
16

17 **9.2.2.1 Notice**

18 Before BPA or a Customer Group proposes in a 7(i) Process an Improvement Proposal, BPA
19 or the Customer Group will notify all Customers of the Improvement Proposal in advance of
20 the 7(i) Process and the proponent’s reasons for: 1) why the Improvement Proposal will
21 improve or enhance implementation of the PRDM in a way that will continue to effectuate
22 its purposes but be more cost-effective and efficient, customer responsive, readily
23 implementable, or capable of fulfilling the PRDM’s purposes, and 2) how the value of the
24 Improvement Proposal outweighs any harm created by it. The notice will specify the date

1 by which each Customer may express its support for the Improvement Proposal, and the
2 means for registering its support.

3
4 **9.2.2.2 Customer Approval**

5 BPA or the Customer Group may propose in a 7(i) Process the Improvement Proposal only
6 if it is approved by Customers totaling both 1) at least 70 percent of Customers (utility
7 count) and 2) at least 50 percent of the sum of the CHWMs, with both of the foregoing
8 measured by the individual vote of each Customer. In determining the total, BPA shall
9 count each abstention and absence of a vote as a vote that the Customer does not approve
10 the Improvement Proposal.

11
12 In the event that the Customers approving the Improvement Proposal are less than the
13 voting requirements of the preceding paragraph, then the Improvement Proposal will not
14 be proposed in any 7(i) Process by BPA, the Customer Group, or any Customer until the
15 voting requirements in this Section 9.2.2.2 above are satisfied.

16
17 In the event that the Customers approving the Improvement Proposal are equal to or more
18 than the voting requirements of this Section 9.2.2.2, then BPA or the Customer Group may
19 propose the Improvement Proposal in a 7(i) Process. The Improvement Proposal will be
20 considered in the normal course through the 7(i) Process with a decision in the
21 Administrator's Record of Decision.

1 **9.3 Revisions for Unintended Consequences**

2 **9.3.1 Criteria and Conditions for Revisions for Unintended Consequences**

3 With the exception of PRDM changes that are constrained by Section 9.1.2 (Core
4 Provisions) or implementation of the PRDM reserved by Section 9.1.3 (Expressly Not
5 Revisions), BPA may, in accordance with the applicable procedures of this
6 ~~Section~~Chapter 9, propose revisions in the PRDM: 1) to address or avoid unintended
7 consequences that put at risk the Principles and Goals underlying the PRDM as set forth in
8 Section 1.1 of ~~the Provider of Choice Policy~~BPA’s Provider of Choice Policy, or 2) to
9 accommodate BPA’s participation in a day-ahead market. However, nothing in this Section
10 9.3 constrains BPA’s ability to propose revisions in the PRDM to ensure cost recovery or
11 comply with a Court ruling that also accommodate BPA’s participation in a day-ahead
12 market; such proposals must comply with the requirements in Section 9.4.1.

13
14 **9.3.2 Process for Revisions for Unintended Consequences that Do Not Affect Others**
15 **or General Policies**

16 ~~**9.3.2.1 Procedures Not Applicable if Unintended Consequences Affect Others**~~
17 ~~**or General Policies**~~

18 The procedures set forth in this Section 9.3.2 apply only to revisions to the PRDM as
19 provided for in Section 9.3.1 that address or rectify unintended consequences of the PRDM
20 that affect only Customers with CHWM Contracts, or that do not affect or affect only in a *de*
21 *minimis* manner ~~the investor-owned utilities (IOU)~~ or direct service industry (DSI)
22 customers of BPA or BPA customers that are not eligible for or do not take service under
23 CHWM Contracts (“Unintended Consequence Proposal”). Such procedures do not apply to,
24 and an Unintended Consequence Proposal does not encompass, proposed revisions to the
25 PRDM that are necessary to address or rectify unintended consequences of the PRDM that
26 affect BPA programs or policies of general application (*e.g.*, the unintended consequence

1 affects programmatic responsibilities such as fish and wildlife, conservation, or
2 transmission).

3
4 BPA or a Customer Group may propose an Unintended Consequence Proposal in a
5 7(i) Process only after complying with the requirements of this Section 9.3.2.

6
7 **9.3.2.21 Notice**

8 Before such an Unintended Consequence Proposal is introduced in a 7(i) Process by BPA or
9 a Customer Group, BPA will notify all Customers in advance of the 7(i) Process of the
10 Unintended Consequence Proposal and the proponent's reasons for: 1) why the
11 Unintended Consequence Proposal will address or rectify the unintended consequence that
12 puts at risk the Principles and Goals underlying the PRDM as set forth in Section 1.1 of the
13 Provider of Choice Policy, and 2) how the value of the Unintended Consequence Proposal
14 outweighs any detriment created by it. The notice will specify the date by which each
15 Customer may object to the Unintended Consequence Proposal and the means for
16 registering its objection.

17
18 **9.3.2.32 Customer Objection**

19 BPA or the Customer Group may propose in a 7(i) Process the Unintended Consequence
20 Proposal unless it is objected to by Customers totaling both 1) at least 70 percent of
21 Customers (utility count) and 2) at least 50 percent of the sum of the CHWMs, with both of
22 the foregoing measured by the individual vote of each Customer. In determining the total,
23 BPA shall count each abstention and absence of a vote as a vote that the Customer does not
24 object to the proposed change.

1 In the event that the Customers objecting to the Unintended Consequence Proposal equal
2 or exceed the voting requirements of the preceding paragraph, then BPA, the Customer
3 Group, or any Customer shall not propose in any 7(i) Process the Unintended Consequence
4 Proposal until the voting requirements of this Section 9.3.2 are satisfied.

5
6 In the event that the Customers objecting to the Unintended Consequence Proposal are less
7 than the voting requirements of this Section 9.3.2, BPA or the Customer Group may
8 propose in a 7(i) Process the Unintended Consequence Proposal. The Unintended
9 Consequence Proposal will be considered in the normal course through the 7(i) Process
10 with a decision in the Administrator's Record of Decision.

11
12 **9.3.3 Process for Revisions for Unintended Consequences that Do Affect Others or**
13 **General Programs or Policies**

14 Any proposals to revise the PRDM to address unintended consequences that affect others
15 or general programs or policies (*i.e.*, within the scope of Section 9.3.1, but not within the
16 scope of Section 9.3.2), may be proposed and considered in the normal course through the
17 7(i) Process, with a decision in the Administrator's Record of Decision.

18
19 **9.3.3.1 Notice**

20 ~~However, before~~Before such a proposal is considered in a 7(i) Process by BPA or a
21 Customer Group, BPA will notify all Customers of the proposal and the proponent's reasons
22 for: 1) why the proposal will address or rectify the unintended consequence that puts at
23 risk the Principles and Goals underlying the PRDM as set forth in Section 1.1 of the
24 Provider of Choice Policy and 2) how the value of the proposal outweighs any detriment
25 created by it.
26

1 **9.4 Revisions to PRDM to Ensure Cost Recovery or Comply with Court Ruling**

2 **9.4.1 Criteria and Conditions for Revisions for Cost Recovery or Court Ruling**

3 BPA reserves the right to revise any part of this PRDM if the Administrator has determined
4 in accordance with the applicable procedures set forth in Chapter 9 that: 1) BPA cannot
5 timely and reasonably recover its costs without revising the PRDM; or 2) a revision to the
6 PRDM is necessary to effectively comply with a court ruling. For purposes of this PRDM,
7 reference to a court ruling ~~shall~~will be deemed to include a ruling of the Federal Energy
8 Regulatory Commission that disapproves or remands a BPA rate based on the PRDM.
9

10 **9.4.2 Process for Revisions for Cost Recovery or Court Ruling**

11 BPA will propose only those revisions under Sections 9.4.1 that are necessary to comply
12 with a court ruling or ensure cost recovery ~~“(Recovery/Response Proposal”)~~ and will
13 seek to limit both the number and scope of such revisions.
14

15 **9.4.2.1 Preliminary Procedures Specific to Revisions for Cost Recovery**

16 Before proposing any revision to the PRDM to ensure timely cost recovery, to the extent
17 practicable BPA will take the following steps:

- 18 1) BPA will make reasonable efforts to recover the costs from the party(s) that would
19 otherwise be responsible for such costs. Such efforts may include making demand
20 on any available credit support and pursuing legal action when appropriate.
- 21 2) BPA will make good faith efforts to reduce BPA power costs so as to offset the cost
22 that would otherwise occasion the need for a change in the PRDM to ensure cost
23 recovery.
- 24 3) If the cost recovery problem is occasioned by the design of the PRDM, BPA will
25 convene a public meeting with Customers and interested parties to discuss
26 alternatives to a revision of the PRDM.

1 4) After taking such steps, BPA will issue a report to Customers and interested parties
2 regarding the efforts, including those listed (1-3) above, that the Administrator has
3 taken before resorting to a revision to the PRDM, and why the set of safeguards BPA
4 followed when entering identified transactions (*e.g.*, service at a Tier 2 Rate) was
5 not sufficient to avoid the cost recovery problem.
6

7 These criteria, or disputes over whether the Administrator has satisfied them, do not
8 override and will not be allowed to frustrate the Administrator's responsibility to establish
9 rates to recover costs and timely repay the U.S. Treasury.
10

11 **9.4.2.2 Customer Petition for Mini-Trial Disputing Response/Recovery** 12 **Proposal**

13 Customers that are party to a 7(i) Process may petition for a Mini-Trial alleging the
14 Recovery/Response Proposal is not necessary to ensure cost recovery or respond to a
15 court ruling, and/or that the Recovery/Response Proposal is unreasonably
16 disproportionate to what is needed to comply with the court ruling or to ensure cost
17 recovery, compared to the alternative proposal(s), if any, offered by the Customer(s).
18

19 A written petition so disputing the Response/Recovery Proposal may only be filed with the
20 Hearing Officer within 20 Business Days after submission of BPA's initial proposal in such
21 7(i) Process, or within 10 Business Days after an Administrator's Mini-Trial decision under
22 Section 9.6. ~~(4(C))~~. The petition may be filed only if it is approved by Customers totaling
23 both 1) at least 70 percent of such Customers (utility count), and 2) at least 50 percent of
24 the sum of the CHWMs, with both of the foregoing measured by the individual vote of each
25 Customer.
26

1 Upon receipt of such petition, the Hearing Officer shall expeditiously schedule, consistent
2 with the rate case schedule and the procedural requirements of Section 9.6 (Mini-Trial), a
3 Mini-Trial regarding whether BPA's Response/Recovery Proposal is necessary to ensure
4 cost recovery or respond to a court ruling as provided for in Section 9.4.1, and/or whether
5 the Response/Recovery Proposal is unreasonably disproportionate to what is needed to
6 comply with the court order or to ensure cost recovery, compared to the alternative
7 proposal(s), if any, offered by the Customer(s).

8
9 If no such petition is timely filed, the Recovery/Response Proposal will be considered in the
10 normal course through the 7(i) Process with a decision in the Administrator's Record of
11 Decision.

12 13 **9.5 Disputes Alleging Irreconcilable Conflict with the PRDM**

14 **9.5.1 Criteria and Conditions for Determining an Irreconcilable Conflict Exists**

15 An Irreconcilable Conflict exists only when:

- 16 1) The PRDM clearly and unambiguously requires or prohibits an action, and an action
17 or inaction proposed by BPA (~~the~~ "BPA Position") is contrary to such requirement
18 or prohibition; or
- 19 2) The PRDM is silent, ambiguous, or leaves a gap regarding the matter in question,
20 and the BPA Position cannot be reconciled with any reasonable interpretation of
21 what the PRDM does provide for.

1 **9.5.2 Customer Petition for Mini-Trial Alleging Irreconcilable Conflict within a 7(i)**
2 **Process**

3 Customers that are party to a 7(i) Process may petition for a Mini-Trial alleging that a BPA
4 Position in such 7(i) Process is in Irreconcilable Conflict with the PRDM.

5
6 A written petition so alleging may only be filed with the Hearing Officer within 20 Business
7 Days after submission of BPA's initial proposal in a 7(i) Process. The petition may be filed
8 only if it is approved by Customers totaling both 1) at least 70 percent of such Customers
9 (utility count) and 2) at least 50 percent of the sum of the CHWMs of all such Customers,
10 with both of the foregoing measured by the individual vote of each Customer. Such petition
11 must allege that 1) a BPA Position in the 7(i) Process is in Irreconcilable Conflict with the
12 PRDM; 2) BPA has not sought to revise the PRDM to reconcile it with the BPA Position; and
13 3) such Customers oppose the BPA Position.

14
15 Upon receipt of such petition, the Hearing Officer shall expeditiously schedule, consistent
16 with the rate case schedule and the procedural requirements of Section 9.6 (Mini-Trial), a
17 Mini-Trial regarding whether the BPA Position is in Irreconcilable Conflict with the PRDM.

18
19 If no such petition is timely filed, the BPA Position will be considered in the normal course
20 through the 7(i) Process with a decision in the Administrator's Record of Decision.

21
22 **9.5.3 Customer Petition for Mini-Trial Alleging Irreconcilable Conflict Outside a 7(i)**
23 **Process**

24 Customers may petition for a Mini-Trial alleging that a BPA final action or inaction, other
25 than the Administrator's Record of Decision following a 7(i) Process, is in Irreconcilable
26 Conflict with the PRDM.

1 A written petition so alleging may only be submitted to the Administrator within 20
2 Business Days after a BPA final action or inaction. The petition may be filed only if it is
3 approved by Customers totaling both 1) at least 70 percent of such Customers (utility
4 count) and 2) at least 50 percent of the sum of the CHWMs of all such Customers, with both
5 of the foregoing measured by the individual vote of each Customer. Such petition must
6 allege that 1) a BPA final action or inaction is in Irreconcilable Conflict with the PRDM; and
7 2) such Customers oppose the BPA final action or inaction.

8
9 Upon receipt of such petition, the Administrator shall expeditiously schedule, consistent
10 the procedural requirements of Section 9.6 (Mini-Trial), a Mini-Trial regarding whether the
11 BPA final action or inaction is in Irreconcilable Conflict with the PRDM.

12 13 **9.6 Mini-Trial Before the Administrator**

14 If a Mini-Trial is scheduled pursuant to Section 9.4 (Cost Recovery/Court Ruling) or 9.5
15 (Irreconcilable Conflict), the following procedures will apply. A Mini-Trial pursuant to
16 Section 9.4 (Cost Recovery/Court Ruling) or 9.5.2 (Irreconcilable Conflict Within 7(i)
17 Process) shall will be a part of the 7(i) Process, and shall will be presided over by the
18 Hearing Officer. A Mini-Trial Pursuant to 9.5.3 (Irreconcilable Conflict Outside 7(i)
19 Process) shall will not be part of a 7(i) Process, and shall will be presided over by the
20 Administrator. A Mini-Trial shall will consist of the following:

- 21 1) Parties shall file statements of position that summarize their arguments regarding
22 the issue(s) in the underlying petition. Parties with like positions should attempt to
23 consolidate their submissions.
- 24 2) Oral presentations, not to exceed two (2) days in total, shall will be scheduled before
25 the Administrator, and such other BPA executives designated by the Administrator.

1 The order of presentation ~~shall~~will be: 1) the parties in opposition to the BPA
2 Position, Recovery/Response Proposal, or BPA final action or inaction; 2) parties, if
3 any, in support of the BPA Position, Recovery/Response Proposal, or BPA final
4 action or inaction; and 3) rebuttal by parties in opposition. Parties' presentations
5 may consist of testimony, oral argument, or a combination of both. The
6 Administrator may ask any questions or engage in any discussion with any of the
7 participating parties that he or she deems appropriate.

8 3) Within 15 Business Days of the oral presentations, unless extended by the
9 Administrator for good cause, the Administrator shall provide a written statement
10 that BPA maintains, modifies, or withdraws the BPA Position or Recovery/Response
11 Proposal; or whether the BPA final action or inaction is in Irreconcilable Conflict
12 with the PRDM. The Administrator shall summarize the basis for his or her decision.
13 In a Mini-Trial pursuant to 9.4 (Cost Recovery/Court Ruling) or 9.5.2 (Irreconcilable
14 Conflict Within 7(i) Process), the Administrator retains the ability to reach a
15 different final decision at the conclusion of the 7(i) Process in the Administrator's
16 Record of Decision.

17 4) In a Mini-Trial pursuant to 9.5.2 (Irreconcilable Conflict Within 7(i) Process), the
18 Administrator may decide the BPA Position:

19 Aa) is not in Irreconcilable Conflict with the PRDM;

20 Bb) is in Irreconcilable Conflict with the PRDM, but BPA is now proposing to
21 revise the PRDM consistent with Section 9.3.3 (Unintended Consequence that
22 affects others); ~~or~~

23 Cc) is in Irreconcilable Conflict with the PRDM, but BPA is now proposing to
24 revise the PRDM consistent with Section 9.4 (Cost Recovery/Court Ruling).

25 Dd) is in Irreconcilable Conflict with the PRDM, and BPA is withdrawing the BPA
26 Position or Recovery/Response Proposal.

1 The Customer petition opposing the BPA Position forecloses revisions under
2 Section 9.2 (Improvement/Enhancement) and revisions under Section 9.3.2
3 (Unintended Consequences that do not affect others). ~~Under Subsection B~~In the case
4 of “b)” (above), the Administrator’s decision will be accompanied by the notice
5 required in Section 9.3.3.

6 ~~Under Subsection C~~In the case of “c)” (above), the Administrator’s decision will, to
7 the extent practicable, be accompanied by the report in Section 9.4.2.1.

8 Consistent with Section 9.4.2.2, Customers will have 10 Business Days following the
9 Administrator’s decision to petition for a Mini-Trial regarding whether BPA’s
10 Response/Recovery Proposal is necessary to ensure cost recovery or respond to a
11 court ruling as provided for in Section 9.4.1, and/or whether the
12 Response/Recovery Proposal is unreasonably disproportionate to what is needed to
13 comply with the court order or to ensure cost recovery, compared to the alternative
14 proposal(s), if any, offered by the Customer(s).

15 5) A Mini-Trial pursuant to 9.4 (Cost Recovery/Court Ruling) or 9.5.2 (Irreconcilable
16 Conflict Within 7(i) Process) provides an opportunity for Customers to directly
17 address the Administrator early in the 7(i) Process, but does not limit the positions
18 BPA or parties may take during the 7(i) Process. The BPA Position,
19 Recovery/Response Proposal, or Unintended Consequence Proposal resulting from
20 the Mini-Trial will be considered in the normal course through the 7(i) Process with
21 a decision in the Administrator’s Record of Decision.

22 6) In a Mini-Trial pursuant to 9.5.3 (Irreconcilable Conflict Outside 7(i) Process), if the
23 Administrator determines the BPA final action or inaction is in Irreconcilable
24 Conflict with the PRDM, BPA will take all practicable necessary steps within its
25 authority to revoke the BPA final action or inaction. BPA may seek to revise the
26 PRDM using the procedures in this Chapter 9. In no event shall will the BPA final

1 action or inaction, any decision made pursuant to this Section 9.6, or any action by
2 BPA pursuant to such decision be construed to provide a basis for a claim of
3 damages; liability for loss of profits; or special, incidental, or consequential
4 damages.
