SECTION 7(B)(2) RATE TEST

TABLE OF CONTENTS

	Page
COMMONLY USED ACRONYMS	iii
1. PROGRAM CASE RATES ANALYSIS MODEL	1
2. 7(b)(2) Case Rates Analysis Model.....	27
3. 7(b)(2) Rate Test Results	57

APPENDICES:

APPENDIX B: *Financing Cost Study*

APPENDIX C: *Analysis of Deferred Expensed Conservation Costs*

APPENDIX D: *Non Conservation Resources - Documentation*

APPENDIX E: *REP – Average System Cost Summary Tables*

APPENDIX F: *REP – Average System Cost – Utility Information*

APPENDIX G: *REP – Average System Cost – Purchased Power and Sales for Resale*

This page intentionally left blank.

COMMONLY USED ACRONYMS

AC	alternating current
AFUDC	Allowance for Funds Used During Construction
AGC	Automatic Generation Control
ALF	Agency Load Forecast (computer model)
aMW	average megawatt
AMNR	Accumulated Modified Net Revenues
ANR	Accumulated Net Revenues
AOP	Assured Operating Plan
ASC	Average System Cost
ATC	Accrual to Cash
BAA	Balancing Authority Area
BASC	BPA Average System Cost
Bcf	billion cubic feet
BiOp	Biological Opinion
BPA	Bonneville Power Administration
Btu	British thermal unit
CAISO	California Independent System Operator
CBFWA	Columbia Basin Fish & Wildlife Authority
CCCT	combined-cycle combustion turbine
cfs	cubic feet per second
CGS	Columbia Generating Station
CHJ	Chief Joseph
C/M	consumers per mile of line ratio for LDD
COB	California-Oregon Border
COE	U.S. Army Corps of Engineers
COI	California-Oregon Intertie
COSA	Cost of Service Analysis
COU	consumer-owned utility
Council	Northwest Power and Conservation Council
CP	Coincidental Peak
CRAC	Cost Recovery Adjustment Clause
CRC	Conservation Rate Credit
CRFM	Columbia River Fish Mitigation
CRITFC	Columbia River Inter-Tribal Fish Commission
CSP	Customer System Peak
CT	combustion turbine
CY	calendar year (January through December)
DC	direct current
DDC	Dividend Distribution Clause
dec	decremental (pertains to generation movement)
DJ	Dow Jones
DO	Debt Optimization
DOE	Department of Energy
DOP	Debt Optimization Program

DSI	direct-service industrial customer or direct-service industry
DSO	Dispatcher Standing Order
EAF	energy allocation factor
ECC	Energy Content Curve
EIA	Energy Information Administration
EIS	Environmental Impact Statement
EN	Energy Northwest, Inc. (formerly Washington Public Power Supply System)
EPA	Environmental Protection Agency
EPP	Environmentally Preferred Power
EQR	Electric Quarterly Report
ESA	Endangered Species Act
F&O	financial and operating reports
FBS	Federal base system
FCRPS	Federal Columbia River Power System
FCRTS	Federal Columbia River Transmission System
FERC	Federal Energy Regulatory Commission
FELCC	firm energy load carrying capability
FPA	Federal Power Act
FPS	Firm Power Products and Services (rate)
FY	fiscal year (October through September)
GAAP	Generally Accepted Accounting Principles
GARD	Generation and Reserves Dispatch (computer model)
GCL	Grand Coulee
GCPs	General Contract Provisions
GEP	Green Energy Premium
GI	Generation Integration
GRI	Gas Research Institute
GRSPs	General Rate Schedule Provisions
GSP	Generation System Peak
GSU	generator step-up transformers
GTA	General Transfer Agreement
GWh	gigawatthour
HLH	heavy load hour
HOSS	Hourly Operating and Scheduling Simulator (computer model)
HYDSIM	Hydro Simulation (computer model)
IDC	interest during construction
inc	incremental (pertains to generation movement)
IOU	investor-owned utility
IP	Industrial Firm Power (rate)
IPR	Integrated Program Review
IRP	Integrated Resource Plan
ISD	incremental standard deviation
ISO	Independent System Operator
JDA	John Day
kaf	thousand (kilo) acre-feet

kcfs	thousand (kilo) cubic feet per second
K/I	kilowatthour per investment ratio for LDD
ksfd	thousand (kilo) second foot day
kV	kilovolt (1000 volts)
kVA	kilo volt-ampere (1000 volt-amperes)
kVAr	kilo-volt ampere reactive
kW	kilowatt (1000 watts)
kWh	kilowatthour
LDD	Low Density Discount
LGIP	Large Generator Interconnection Procedures
LLH	light load hour
LME	London Metal Exchange
LOLP	loss of load probability
LRA	Load Reduction Agreement
m/kWh	mills per kilowatthour
MAE	mean absolute error
Maf	million acre-feet
MCA	Marginal Cost Analysis
MCN	McNary
Mid-C	Mid-Columbia
MIP	Minimum Irrigation Pool
MMBtu	million British thermal units
MNR	Modified Net Revenues
MOA	Memorandum of Agreement
MOP	Minimum Operating Pool
MORC	Minimum Operating Reliability Criteria
MOU	Memorandum of Understanding
MRNR	Minimum Required Net Revenue
MVA	mega-volt ampere
MVAr	mega-volt ampere reactive
MW	megawatt (1 million watts)
MWh	megawatthour
NCD	non-coincidental demand
NEPA	National Environmental Policy Act
NERC	North American Electric Reliability Corporation
NFB	National Marine Fisheries Service (NMFS) Federal Columbia River Power System (FCRPS) Biological Opinion (BiOp)
NIFC	Northwest Infrastructure Financing Corporation
NLSL	New Large Single Load
NOAA Fisheries	National Oceanographic and Atmospheric Administration Fisheries (officially National Marine Fisheries Service)
NOB	Nevada-Oregon Border
NORM	Non-Operating Risk Model (computer model)
Northwest Power Act	Pacific Northwest Electric Power Planning and Conservation Act
NPCC	Northwest Power and Conservation Council

NPV	net present value
NR	New Resource Firm Power (rate)
NT	Network Transmission
NTSA	Non-Treaty Storage Agreement
NUG	non-utility generation
NWPP	Northwest Power Pool
OATT	Open Access Transmission Tariff
O&M	operation and maintenance
OMB	Office of Management and Budget
OTC	Operating Transfer Capability
OY	operating year (August through July)
PDP	proportional draft points
PF	Priority Firm Power (rate)
PI	Plant Information
PMA	(Federal) Power Marketing Agency
PNCA	Pacific Northwest Coordination Agreement
PNRR	Planned Net Revenues for Risk
PNW	Pacific Northwest
POD	Point of Delivery
POI	Point of Integration or Point of Interconnection
POM	Point of Metering
POR	Point of Receipt
Project Act	Bonneville Project Act
PS	BPA Power Services
PSC	power sales contract
PSW	Pacific Southwest
PTP	Point to Point Transmission (rate)
PUD	public or people's utility district
RAM	Rate Analysis Model (computer model)
RAS	Remedial Action Scheme
Reclamation	U.S. Bureau of Reclamation
RD	Regional Dialogue
REC	Renewable Energy Certificate
REP	Residential Exchange Program
RevSim	Revenue Simulation Model (component of RiskMod)
RFA	Revenue Forecast Application (database)
RFP	Request for Proposal
RiskMod	Risk Analysis Model (computer model)
RiskSim	Risk Simulation Model (component of RiskMod)
RMS	Remote Metering System
RMSE	root-mean squared error
ROD	Record of Decision
RPSA	Residential Purchase and Sale Agreement
RTF	Regional Technical Forum
RTO	Regional Transmission Operator
SCADA	Supervisory Control and Data Acquisition

SCCT	single-cycle combustion turbine
Slice	Slice of the System (product)
SME	subject matter expert
TAC	Targeted Adjustment Charge
TDA	The Dalles
Tcf	trillion cubic feet
TPP	Treasury Payment Probability
Transmission System Act	Federal Columbia River Transmission System Act
TRL	Total Retail Load
TRM	Tiered Rate Methodology
TS	BPA Transmission Services
UAI	Unauthorized Increase
UDC	utility distribution company
URC	Upper Rule Curve
USFWS	U.S. Fish and Wildlife Service
VOR	Value of Reserves
WECC	Western Electricity Coordinating Council (formerly WSCC)
WIT	Wind Integration Team
WPRDS	Wholesale Power Rate Development Study
WREGIS	Western Renewable Energy Generation Information System
WSPP	Western Systems Power Pool

1. PROGRAM CASE RATES ANALYSIS MODEL

This page intentionally left blank.

Description of Ratemaking Tables

7(b)(2) Rate Test Program Case

Table 1.1.1 (Sales_01)

Total PF Load Forecast, FY2010-15

Gigawatthour (GWh) energy sales and peak megawatt (MW)/mo. demand amounts for each month of the Rate Test Period Fiscal Year (FY) 2010-2015.

Table 1.1.2 (Sales_02)

Total PF Exchange Load Forecast, FY2010-15

GWh energy sales and peak MW/mo. demand amounts for each month of the Rate Test Period FY 2010-2015.

Table 1.1.3 (Sales_03)

Total IP Load Forecast, FY2010-15

GWh energy sales and peak MW/mo. demand amounts for each month of the Rate Test Period FY 2010-2015.

Table 1.1.4 (Sales_04)

Total NR Load Forecast, FY2010-15

GWh energy sales and peak MW/mo. demand amounts for each month of the Rate Test Period FY 2010-2015. (Note: No sale under the NR rate schedule is forecast for this test period. In order to calculate a rate in the case where there is no actual load, the token load of 0.0001 aMW was used.)

Table 1.2 (Exchange_01)

Forecast for Traditional Residential Exchange Program, FY2010-15.

Forecast of potential exchanging utilities' average system cost (ASC) and exchangeable load.

Table 1.3.1 to Table 1.3.6 (COSA_06)

Itemized Revenue Requirements, FY2010-15.

Power Business Line (PBL) revenue requirements for each FY during the rate test period

Table 1.3.7 (COSA_07)

Functionalization of Residential Exchange Costs, FY2010.

REP costs are functionalized to power to comport with other functionalized costs moving through COSA into the Rate Design Step of the RAM.

Description of Ratemaking Tables

7(b)(2) Rate Test Program Case

Table 1.3.8 (COSA_08)

Classified Revenue Requirement, FY2010.

Generation costs are classified between energy, demand, and load variance for display purposes. All generation costs move through COSA into the Rate Design Step of the RAM. Demand charge and load variance charge revenues are applied to the generation revenue requirement during the calculation of energy charges.

Table 1.3.9 (COSA_09)

Functionalized Revenue Credits, FY2010-15.

Revenue credits are anticipated revenues during the rate test period. In tables that follow, these revenue credits are directly assigned to Federal Base System (FBS) power and have the effect of reducing the cost of FBS resources in the ratemaking process.

Table 1.3.10 (COSA_09A)

Allocation of EE Revenue Credits to Conservation Costs, FY2010-15.

Energy Efficiency revenues are credited against conservation program costs rather than being directly assigned to Federal Base System (FBS) power as are the bulk of BPA's other revenue credits.

Table 1.4.1 (ALLOCATE 01)

Energy Allocation Factors (EAF), FY2010-15.

Values are derived from the rate case load/resource balance and are average megawatt (aMW) at generation level (sales plus transmission losses). These EAFs are used in the resource pool to rate pool allocation determination.

Table 1.4.2 (ALLOCATE 02)

Initial Rate Pool Cost Allocation, FY2010-15.

Table shows the initial allocation of the revenue requirement costs from the COSA to rate pools using the EAFs from table ALLOCATE 01.

Table 1.5.1 (RDS_11)

Allocation of Secondary Revenues and Other Revenue Credits, FY2010-15.

Tables summarize revenue from secondary power sales and revenues from Other Revenue Credits from Table COSA 09. Gross secondary revenues are adjusted to account for a 7(b)(3) cost allocation to secondary sales. These revenues are then allocated to rate pools using the EAFs from table ALLOCATE 01. The allocation is based on the service provided by the FBS and NR resources to these rate pools.

Description of Ratemaking Tables

7(b)(2) Rate Test Program Case

Table 1.5.2 (RDS_17)

Surplus Firm Power Revenues (Surplus)/Shortfall, FY2010-15.

Table calculates the firm surplus sale revenue (surplus)/shortfall. Generation revenue requirement costs allocated to FPS sales in table ALLOCATE 02 are reduced by the excess revenue credit allocated to FPS sales in table RDS_11. The resulting costs are compared with the revenues recovered from FPS sales, resulting in a revenue deficit. This revenue deficit is allocated based on the service provided by the FBS and NR resources to these rate pools.

Table 1.5.3 (RDS_19)

Summary of Initial Cost Allocations, FY2010-15.

Table summarizes the allocations from Tables ALLOCATE 02, RDS 11, and RDS 17, as well as allocates Low Density Discount and Irrigation Rate Mitigation costs to the PF rate pool.

Table 1.5.4 (RDS_21)

7(C)(2) Delta Calculation and Allocation of 7(C)(2) Delta, FY2010-15.

Table solves a formula for calculating the 7(c)(2) delta appropriate for this point in the model. Table allocates the 7(c)(2) delta to PF and NR rate classes based on allocation factors developed in ALLOCATE 01.

Table 1.5.5 (RDS_23)

Industrial Firm Power Floor Rate Calculation, FY2010-15.

The IP-83 rates are applied to the current DSI test period billing determinants to determine an average rate. Adjustments are made for Transmission, Exchange Cost, and Deferral to yield the DSI floor rate.

Table 1.5.6 (RDS_24)

Industrial Firm Power Floor Rate Test FY2010.

Table performs the DSI floor rate test and calculates the DSI floor rate adjustment if applicable. IP revenue under proposed rates is compared with revenue under the DSI floor rate. If DSI floor rate revenues are greater, a DSI floor rate adjustment is required. The amount of the DSI floor rate adjustment is then added to the IP allocated costs and subtracted from the other firm power rate pools allocated costs.

Table 1.6 (RDS_50)

Calculation of PF Preference Rate Components, FY2010.

Table calculates unbifurcated PF rates. The FY 2009 PF Preference rates are scaled to produce rates that recover costs allocated to PF energy. Example shown is for FY 2010.

2. 7(b)(2) CASE RATES ANALSYS MODEL

This page intentionally left blank.

Description of Ratemaking Tables

7(b)(2) Rate Test 7(b)(2) Case

Table 2.1 (7b2 Sales_01)

7(b)(2) Case Load Forecast, FY2010-15.

GWh energy sales and peak MW/mo. demand amounts for each month of the 7(b)(2) Rate Test Period FY 2010-2015. These billing determinants are used to calculate PF Preference rates and revenues for the rate test period. For the 7(b)(2) Case, PF Preference sales assume no programmatic conservation has been achieved and DSI load within or adjacent to 7(b)(2) Customer service areas will be served by those customers.

Table 2.2.1 (7B2 Resource_01)

Section 7(b)(2) Load Resource Balance Calculation, FY2010-15.

Table starts with the FBS resource from the Program Case used to serve posted rates load. Transmission losses are subtracted. The amount of Program Case FBS used to serve FPS load for contract not in force at the time of the Regional Power Act is added. The 7(b)(2) Case PF load is then subtracted to yield the amount of resource needed from the 7(b)(2) resource stack.

Table 2.2.2 (7B2 Resource_02)

Example of 7(b)(2) Resource Stack.

Table lists and example of the 7(b)(2) resources in order of least cost first. Resources include those that are owned or purchased by 7(b)(2) Customers and are not dedicated to serve regional loads under 5(b). Programmatic conservation resources for FY2001-2015 are also included.

Table 2.2.3 (7B2 Resource_03)

7(b)(2) Resources Sorted by Least Cost.

Table lists 7(b)(2) resources available to serve load in the 7(b)(2) Case. Individual resource output and cumulative output are listed. First year cost for each resource is listed along with the cumulative first year costs. For conservation resources, the first year cost is the programmatic costs expensed in the first year along with the first year's portion of the capitalized expense. For non-conservation resources, the first year cost is that year's portion of the capitalized cost. Also listed are the annual second year costs and the levelized cost that is used in the sorting process.

Description of Ratemaking Tables

7(b)(2) Rate Test 7(b)(2) Case

Table 2.2.4 (7B2 Resource_04)

Conservation Resources aMW Selected.

Table lists the conservation resources selected in each year and the total amount selected in each year. The amount of conservation selected in each year will affect the 7(b)(2) Customer load in that year. The original 7(b)(2) Customer load is increased for conservation saving that is assumed not to have occurred. If a conservation resource is selected from the 7(b)(2) resource stack, its costs go into the revenue requirement and the 7(b)(2) Customer loads are then reduced by the amount of the resource selected.

Table 2.2.5 (7B2 Resource_05)

Real Dollar Cost of Resources Selected.

Table lists costs of resources selected from the 7(b)(2) resource stack in real 2010 dollars. The costs are listed for each year in which the resource is used to serve load. The costs shown are before accounting for the amortization of the first year expensed portion of the conservation resources selected.

Table 2.2.6 (7B2 Resource_06)

Nominal Amortized Cost of Expensed Portion of Conservation Resources Selected.

Table lists the annual payments associated with amortizing the first year expensed portion of conservation resource costs over a five-year period. A mortgage payment calculation was used.

Table 2.2.7 (7B2 Resource_07)

Nominal Annual Cost of Capital Portion of Conservation Resources Selected.

Table lists the annual payments associated with the capitalized portion of conservation resource costs over the fifteen-year life of each resource. A mortgage payment calculation was used.

Table 2.2.8 (7B2 Resource_08)

Nominal Total Annual Cost of All Resources Selected.

Table lists the total nominal cost of resources selected for each year in which they serve 7(b)(2) Customer load. The annual totals are also shown.

Description of Ratemaking Tables

7(b)(2) Rate Test 7(b)(2) Case

Table 2.2.9 (7B2 Resource_09)

Calculation of Annual Credit for the Sale of Excess 7(b)(2) Resource Capability.

Table calculates the portion of the last resource selected in each year that is in excess of need. The excess capability is assumed to be sold at the levelized cost of the last resource selected in that year. The recovered cost of the last annual resource is then credited to the total cost of resources selected in each year and the net resource costs are input to the revenue requirement for each year.

Table 2.3.1 to Table 2.3.6 (COSA_06)

Itemized Revenue Requirements, FY2010-15.

Power Business Line (PBL) revenue requirements for each FY during the rate test period

Table 2.3.7 (COSA_08)

Classified Revenue Requirement, FY2010.

Generation costs are classified between energy, demand, and load variance. All costs move through COSA into the Rate Design Step of the RAM. Demand charge and load variance charge revenues are applied to the generation revenue requirement during the calculation of energy charges.

Table 2.3.8 (COSA_09)

Functionalized Revenue Credits, FY2010-15.

Revenue credits are anticipated revenues during the rate test period. In tables that follow, these revenue credits are directly assigned to Federal Base System (FBS) power and have the effect of reducing the cost of FBS resources in the ratemaking process.

Table 2.4.1 (ALLOCATE 01)

Energy Allocation Factors (EAF), FY2010-15.

Values are derived from the rate case load/resource balance and are average megawatt (aMW) at generation level (sales plus transmission losses). These EAFs are used in the resource pool to rate pool allocation determination.

Table 2.4.2 (ALLOCATE 02) Initial Rate Pool Cost Allocation, FY2010-15.

Table shows the initial allocation of the revenue requirement costs from the COSA to rate pools using the EAFs from table ALLOCATE 01.

Description of Ratemaking Tables

7(b)(2) Rate Test 7(b)(2) Case

Table 2.5.1 (RDS_11)

Allocation of Secondary Revenues and Other Revenue Credits, FY2010-15.

Tables summarize revenue from secondary power sales and revenues from Other Revenue Credits from Table COSA 09. These revenues are then allocated to rate pools using the EAFs from table ALLOCATE 01. The allocation is based on the service provided by the FBS and NR resources to these rate pools.

Table 2.5.2 (RDS_17)

Calculation of FPS (Surplus)/Shortfall, FY2010-15.

Table calculates the firm surplus sale revenue (surplus)/shortfall. Generation revenue requirement costs allocated to FPS sales in table ALLOCATE 02 are reduced by the excess revenue credit allocated to FPS sales in table RDS_11. The resulting costs are compared with the revenues recovered from FPS sales, resulting in a revenue deficit. This revenue deficit is allocated based on the service provided by the FBS and NR resources to these rate pools.

Table 2.5.3 (RDS_19)

Summary of Initial Cost Allocations, FY2010-15.

Table summarizes the allocations from Tables ALLOCATE 02, RDS 11, and RDS 17, as well as allocates Low Density Discount and Irrigation Rate Mitigation costs to the PF rate pool.

Table 2.6 (RDS_50)

Calculation of 7(b)(2) Case PF Preference Rate Components, FY2010.

Table calculates 7(b)(2) Case PF rates. The FY 2009 PF Preference rates are scaled to produce rates that recover costs allocated to PF energy. Example shown is for FY 2010.

WP-10 Wholesale Power Rate Case
Section 7(b)(2) Resource Stack
Accounting / Financing Treatment of Expensed Conservation

Introduction - Summary Information - Table of Contents

	<u>Page</u>
A copy the Rates Analysis Model's - "7b2 Resort Sort" tab, which contains the resources sorted in least-cost order is presented at page B - 2.	B - 2
A summary of the conservation resources that are contained in the resource stack are presented in the historical and projected nominal costs of the year that the investment occurred on page B - 3.	B - 3
The cost of the conservation resources contained in the resource stack are presented in 2010 dollars, see page B-4.	B - 4
Inflation adjustment factors used in the model and in preparing resource stack resource costs	B- 5
Summary analysis of five different factors used to evaluate alternative deferral and financing time periods	B - 6
Alternative 1 - Detailed Analysis - Conservation expensed in the year incurred	B - 12
Alternative 2 - Detailed Analysis - Conservation financed over 4 years	B - 30
Alternative 3 - Detailed Analysis - Conservation financed over 5 years	B - 48
Alternative 4 - Detailed Analysis - Conservation financed over 6 years	B - 66
Alternative 5 - Detailed Analysis - Conservation financed over 7 years	B - 84
Alternative 6 - Detailed Analysis - Conservation financed over 15 years	B - 102
The detailed amounts and costs for non-conservation resources are contained in <u>Appendix C</u> to the 7 (b)(2) Study Documentation. The summary resource cost values that are contained in the resource stack are presented in 2010 dollars.	
The detailed amounts and costs for conservation resources are contained in <u>Appendix D</u> to the 7 (b)(2) Study Documentation. The summary conservation resource cost values that are contained in the resource stack are presented in 2010 dollars.

35										
36	Average Cost of conservation Savings - \$/aMW							\$2,854.4		
37										
38	Notes:									
39										
40	Note 1 - The amount of conservation in the resource stack for FY2001-2009 (231.7aMW) together with billing credit									
41	resources contained in the resource stack of 10.1 aMW establish the amount of the load resource balance difference									
42	between the Program Case and the 7(b)(2) Case at the start of the Rate Test Period (October 1, 2009) amounting									
43	to 241.8 aMW.									
44										
45	Note 2 - Historical conservation investments that occurred prior to FY 2001 that will have been fully amortized before the									
46	end of the rate test period in FY 2015, based on a composite useful life of 15 years, are viewed as obsolete conservation									
47	investments that are not includable in the 7(b)(2) resource stack.									
48										
49	Note 3 - Conservation saving amounts for FY2001-2008 were based on the information contained in Tables A and B of the									
50	Conservation Resource Energy Data for FY 2009 (The RED Book which covered FY1982-2008). Those savings amounts									
51	were then adjusted to arrive at the actual savings that would reduce the Administrator's load obligation in the 7(b)(2) Case.									
52	The projected FY 2009 savings and cost amounts were based on the 2nd Quarter review financial summary. Conservation									
53	costs and related savings amounts for FY 2010-2015 were revised for the final conservation spending levels that were									
54	adopted in the IPR - 2 process that concluded in May 2009. The conservation costs for FY 2001-2015 contain an									
55	allocation of general and administrative costs following full absorption costing principles.									
56										
57	Note 4 - Conservation costs for FY2001-FY2008 were based on the conservation costs contained in Table D of the									
58	Conservation Resource Energy Data for FY 2009. The costs contained in the RED Book do not contain general and									
59	administrative overhead costs. The costs displayed in Table D were increased for general and administrative costs.									
60	The allocation of general and administrative costs was based on the relationship of total direct staffing costs of BPA's									
61	Energy Efficiency organization and the Power Services Business Line. The amount of G & A administrative costs									
62	allocated to conservation resources was a portion of the total G & A costs assigned to Power Services and Energy									
63	Efficiency.

1/ Global Insight, The U.S. Economy: The 30-Year Focus, August 2008, Base Case Scenario.

2/ Fiscal Year Cumulative Price Deflator escalates to midyear dollars. The first year, 2009, is determined as follows: $1.011 = [(2.159/100)*.5] + 1$. An example of subsequent year cumulative growth such as in 2010 is found as: $1.032 = [1 + (2.057/100)]*1.011$ (Official Agency Forecast Footnote - Will Revise Later)

3/ Index restated to arrive at FY 2010 value = 1.00000.

35	Note 1 - Debt service cash flows are inflation adjusted to the year that the conservation resource is selected from the resource stack. The cash flows associated with							
36	the 9 conservation resources chosen in FY2010 are stated in FY 2010 purchasing power dollar values. The cash flows associated with the single conservation resource							
37	chosen in each of the remaining years of the rate test period are restated in the purchasing power dollar values associated with that year, the year the resource							
38	investment is made. Thus the debt service cash flows are a mixture of purchasing power dollars associated with the year that each conservation investment is made.

Note 1 - Debt service cash flows are inflation adjusted to the year that the conservation resource is selected from the resource stack. The cash flows associated with the 9 conservation resources chosen in FY 2010 are stated in FY 2010 purchasing power dollar values. The cash flows associated with the single conservation resource chosen in each of the remaining years of the rate test period are restated in the purchasing power dollar values associated with that year, the year the resource investment is made. Thus the debt service cash flows are a mixture of purchasing power dollars associated with the year that each conservation investment is made.

Note 1 - Debt service cash flows are inflation adjusted to the year that the conservation resource is selected from the resource stack. The cash flows associated with the 9 conservation resources chosen in FY2010 are stated in FY 2010 purchasing power dollar values. The cash flows associated with the single conservation resource chosen in each of the remaining years of the rate test period are restated in the purchasing power dollar values associated with that year, the year the resource investment is made. Thus the debt service cash flows are a mixture of purchasing power dollars associated with the year that each conservation investment is made.

WP-10 Power Rate Case
Updated Cost Projections for Billing Credit Resources - Purchase Power Contracts
Forecasted Cost of Resource During FY2010

Billing Credit Summary - 7(b)(2) Case

<u>BPA Billing Credits - 7(b)(2) Case Costs - 2010\$S</u>				
<u>Summary:</u>	Average	Total	Cost Per	Annual
	aMW	MWh/Year	MWh	Cost
Project A - South Fork Tolt Hydro Project	6.5468	57,350	\$59.4976	3,412,189
Project B - Winochee Hydro Project	3.5939	31,483	\$58.9409	\$1,855,637
	10.1408	88,833	\$59.30	\$5,267,826
Annual Cost Data	10.1408	88,833	\$59.30	\$5,267,826
Estimated remaining useful life = 30 years				

Notes:
Note 1 - The Program Case Revenue requirement includes the Smith Creek Hydro Project for the years of FY2010-2011 and the Short Mountain Landfill Project for the years FY 2010-2012. The Smith Creek Hydro Project contract terminates on September 30, 2011 and the Short Mountain landfill Project terminates on July 31, 2012. Because these resources are not available to serve 7(b)(2) Customer loads during all years of the rate test period (FY 2010-2015) they were omitted from the 7(b)(2) Case resource stack. The costs and the average hourly energy amounts are not comparable between the Program Case and the 7(b)(2) Case due to the expiration of these power purchase contracts.

Note 2 - Billing Credit Amounts for the Program Case:

	<u>2010</u>	<u>2011</u>	<u>2012</u>	<u>2013</u>	<u>2014</u>	<u>2015</u>
Average Hourly Energy - aMW	17.5	17.5	11.8	10.1	10.1	10.1
Annual Revenue Requirement Costs	\$7,383,000	\$7,469,000	\$5,873,000	\$5,685,000	\$5,749,967	\$5,815,676

Note 3 - The cost of the two billing credit resources contained in the resource stack was based on the alternative cost value average for FY2010-2015 per the applicable contract schedule. Because this amount is an average of the entire six year rate test period, the cost of the resource would be overstated if this average cost amount was escalated by the rate models escalation cost factors. For this reason the annual cost amount is entered in the "Annual Capital Cost" column in the 2010 Rate Model's resource Sort tab, this annual cost amount does not escalate once it is chosen from the resource stack.

Note 4 - The cost paid for billing credits as determined by the applicable contract provisions is dependent on the level of BPA's power and transmission rates during the rate test period. This spread sheet used a projected percentage cost escalation amount of 7.5% for BPA's 2010-2011 Power Rates over the level of BPA's 2007-2009 power rates. Based on the TS-10 Partial Settlement Offer being worked out between BPA and the rate case parties, it was assumed that there would be a 0% percentage increase for BPA's 2010-2011 Transmission Rates over the level of BPA's 2008-2009 transmission rates.

BPA-TS Transmission Rates Partial Settlement Offer

Summary for AE/CAT Meeting

As of January 9, 2009

The following is in the perspective of BPA-PS as a Transmission Customer (TC) of BPA-TS, so the BPA-TS perspective is not necessarily represented.

BPA has been holding Transmission and Power Rates Workshops for several months. BPA-TS has proposed a Transmission Rates Partial Settlement, and asked parties to return signed copies by Jan. 16, 2009 so they may determine whether there is sufficient agreement prior to the Transmission Rates Initial Proposal (February 2009).

Partial Settlement summary:

- Rates stay at WT-08 levels for the base transmission rates, including Network Integration (NT), Point-to-Point (PTP) for the Network and Southern Intertie segments. Power Factor Penalty Charge, Utility Delivery Charge, Scheduling Control and Dispatch, and Generation Supplied Reactive also remained unchanged.
- The following were not included in the settlement: Regulation and Frequency Response, Energy Imbalance, Operating Reserves for Spinning and Supplemental, Generation Imbalance, and Control Area Services. The issues that are not included in the partial settlement will be litigated as part of the rate case.
 - Ancillary Services and Control Area Services will be part of the Transmission docket.
 - Generation Inputs are part of the Power Rates docket.
 - The Wind Integration Rate Case settlement put into place the BPA Wind Integration Team (WIT). The WIT is working on operational and reliability issues.
- To address customers' requests, the settlement includes BPA's plan to hold review and discussions on rate design for future rate periods, for rates such as Utility Delivery Charge (for low voltage service) and the Northern Intertie segment (as separate from the Network segment of PTP).
- The Failure to Comply (FTC) rate increased from \$100 to \$1,000/MW, and includes a new provision that states that those assessed the FTC will be assessed other costs to manage the situation and/or monetary penalties imposed on BPA that results from the customer's non-compliance, to the extent that the customer's non-compliance contributed to the problem.
- To address customer concerns about the increase in the FTC rate, BPA-TS will hold a public business practice process for implementing this new charge. BPA-TS included the provision that the new FTC rate will not be assessed until the business practice process is completed.
- Unauthorized Increase Charge (UIC) increased from twice the rate of the transmission purchase (which varies), to the lower of \$100/MWh plus the FERC price cap for WECC spot market, or \$1,000/MWh. If FERC eliminates this price cap, the charge will be \$500/MWh.
- An updated "Procedures for Redispatch" (Attachment M, formerly referred to as Attachment K) is included. No substantive change.

On a separate note, BPA-PS submitted comments recommending that the Generation and Energy Imbalance rates schedules clarify that when (1) during the Spill Condition and Intentional Deviation situations, and (2) the BPA Incremental Cost is negative (due to negative Mid-C prices), BPA will not pay customers when imbalance energy is delivered to Customers. This is not part of the partial settlement, and is expected to be addressed in the Transmission Rate Case process.

50							
51	5. Projected Annual Amounts Stated in 2010\$\$	14,363,455	14,646,528	14,573,692	14,507,460	19,138,594	19,019,792
52	(line 4 divided by line 2)						
53	6. FY 2010 -2015 Average Total Operating Costs in 2010\$\$	16,041,587	16,041,587	16,041,587	16,041,587	16,041,587	16,041,587
54	7. Operating Cost Adjustment - See Note A below	61,995	61,995	61,995	61,995	61,995	61,995
55	8. Adjusted Annual Cost Amount in 2010 \$\$	16,103,582	16,103,582	16,103,582	16,103,582	16,103,582	16,103,582
56							
57	Ram Model Annual Cost Amounts Using Average Cost Pricing						
58	9. (line 8 times line 2)	16,103,582	16,429,390	16,773,201	17,114,694	17,461,323	17,812,075
59	Annual Variance Over / (Under) (line 9 less line 4)	1,740,127	1,486,533	1,593,506	1,696,339	(3,290,904)	(3,225,602)
60	Total of Annual Variances =	(1)					
61	Note A - It is necessary to make an operating adjustment so that the average total operating costs for all years of the rate test period (FY2010-2015) is equivalent to the						
62	total actual operating costs in nominal dollars (line 4) since the RAM model starts with a beginning cost of when the resource is selected from the resource stack						
63	and then escalates the cost using the fixed escalation factors at line 2 above. If a simple average of the nominal operating costs for the rate test period were used,						
64	the "starting operating cost" of the resource would have been higher at a rate of \$16,878,712 in comparison to the adjusted operating cost amount of \$16,036,758.

54	Notes - Continued:											
55	Note 5 - Fuel Oil inventory costs for FY2010 assumes the average of FY2008 and FY2009 amounts. Fuel oil costs for FY 2011-2015 are escalated at an annual rate of 3.0%.											
56	Note 6 - Based on the information contained in PGE's Best Available Retrofit Technology (BART) Analysis Report (see PGE web site) there are four main areas of pollution											
57	controls that PGE has identified as meeting BART. These are presented below in chronological order of projected installation by the BPA analyst. The costs are based											
58	on information contained in Appendix D - Cost Analysis Summary to the BART report and are displayed below by total 1) Capital Investment Costs, 2) Direct Variable											
59	Annual Production expenses, and 3) Direct Variable Annual Maintenance costs. The Executive Summary and Exhibit D to the BART Report can be found at Attachment E.											
60	The projected debt service costs associated with PRC's 10% share of the capital investments are presented in the financing of capital additions analysis. The costs presented											
61	below are presented in 2007\$\$ based on the information contained in Appendix D to the Bart Report as referenced. The implementation of the measures was informed by PGE's											
62	letter to the Oregon Department of Environmental Quality regarding proposed regional haze rules dated December 17, 2008 (See Attachment D).

STEAM-ELECTRIC GENERATING PLANT STATISTICS (Large Plants)

1. Report data for plant in Service only. 2. Large plants are steam plants with installed capacity (name plate rating) of 25,000 Kw or more. Report in this page gas-turbine and internal combustion plants of 10,000 Kw or more, and nuclear plants. 3. Indicate by a footnote any plant leased or operated as a joint facility. 4. If net peak demand for 60 minutes is not available, give data which is available, specifying period. 5. If any employees attend more than one plant, report on line 11 the approximate average number of employees assignable to each plant. 6. If gas is used and purchased on a therm basis report the Btu content or the gas and the quantity of fuel burned converted to Mct. 7. Quantities of fuel burned (Line 38) and average cost per unit of fuel burned (Line 41) must be consistent with charges to expense accounts 501 and 547 (Line 42) as show on Line 20. 8. If more than one fuel is burned in a plant furnish only the composite heat rate for all fuels burned.

Line No.	Item (a)	Plant Name: <i>Boardman</i> (b)	Plant Name: <i>Boardman</i> (c)
1	Kind of Plant (Internal Comb, Gas Turb, Nuclear)	Steam	Steam
2	Type of Constr (Conventional, Outdoor, Boiler, etc)	Conventional	Conventional
3	Year Originally Constructed	1980	1980

Bonneville Power Administration
2007 Supplemental Wholesale Power Rate Case Initial Proposal

WP-07-E-BPA-88
(BPA-JP6-23)

PGE 2007 Supplemental Wholesale Power Rate Case Data Response

DATA REQUEST NUMBER: BPA-JP6-23

REQUEST DATE: May 15, 2008
REPSONSE DATE: May 22, 2008
DIRECTED TO: PGE

REQUESTOR'S NAME: Paul A. Brodie
AGENCY: BPA

EXHIBIT: WP-07-E-JP6-12

PAGE(S): 37-38

DATA REQUEST:

The above-cited rebuttal testimony addresses the projected costs used in the current rate proceeding. Please provide a copy of annual historical operating budgets for the operation of the Boardman coal plant for the years 2002-2008. Also, please provide the projected operating budgets for the Boardman coal plant to the extent available for CYs 2009-2013.

Paul A Brodie, CPA
Bonneville Power Rate Staff
503-230-3414

PGE RESPONSE:

See BPA-JP6-23 Attachments A and B for the requested information. Attachment A provides the PGE share of annual historical operating costs for the Boardman coal plant for the years 2002-2007. A copy of the 2008 Boardman Operations budget is provided as Attachment B; the PGE share would be 65% of these totals.

PGE does not have future year projected amounts to be charged to the other owners available. The Operation agreement requires only that a budget be prepared for the next year's activity. Funding of cost activities for the Boardman plant is done weekly with the other owners. Each company is responsible for having funds available as required, including those for capital construction, decommissioning, or any other activities necessary for continued operation.

BPA-JP-23 Attachment A

Portland General Electric
Response to Data Request: BPA-JP-23

Portland, OR 97204

Re: Preliminary Comments on Proposed Regional Haze Rules

Dear Brian:

Portland General Electric Company (PGE) appreciates this opportunity to comment on the proposed Regional Haze rulemaking. As you know, the proposed rules are the result of the federal requirement that Oregon submit an initial implementation plan for regional haze (the Regional Haze SIP). This plan must include a determination of Best Available Retrofit Technology (BART) for each BART-eligible source in the state that emits any air pollutant which may reasonably be anticipated to cause or contribute to visibility impairment in any mandatory Class I area. 40 CFR § 51.308(e)(1)(ii). The federal Clean Air Act contains specific criteria for establishing BART and these criteria are carried over into the regulations. In developing these regulations, EPA also promulgated guidelines to be used by the states in developing BART determinations. These guidelines, found in 40 CFR § 51 Appendix Y, contain the majority of the detail regarding how BART determinations are to be conducted.

I. Background

On November 2, 2007, PGE submitted a BART analysis for its coal-fired power plant located in Boardman, Oregon (the Boardman plant).¹ Sources in existence on August 7, 1977 and that both fall into one of the designated source categories and have the potential to emit more than 250 tons per year of a haze-causing pollutant are required to determine BART if they cause or contribute to visibility impairment in a mandatory Class I area. 40 CFR § 51.308(e). DEQ previously determined that the Boardman power plant was in existence, as that term is defined in the federal

¹ The Foster-Wheeler boiler is identified by the U.S. Environmental Protection Agency (EPA) as acid rain program ORISPL code 6106.

Mr. Brian Finneran
December 17, 2008
Page 2

Regional Haze program, on August 7, 1977.² The Boardman plant emits more than 250 tons per year of NO_x, SO₂ and PM, is in one of the designated source categories and was determined by the Oregon Department of Environmental Quality (DEQ or Department) to cause visibility impairment in at least one mandatory Class I area. Therefore, PGE engaged an extensive group of experts that assisted the company in preparing a BART determination for the Boardman plant. This report was submitted on November 2, 2007 and subsequently supplemented in response to dozens of questions posed by various state and federal agencies and interested third parties. The team of experts concluded that for the Boardman plant BART constituted the installation of new low-NO_x burners with a modified overfire air system for NO_x control and the installation of a semi-dry scrubbing system with fabric filters for SO₂ and PM control. PGE concluded that due to the long lead time and complex engineering challenges the company needed five years from the date that the Regional Haze SIP is approved in order to engineer, bid, procure, install and start up the semi-dry scrubbing system. Federal law authorizes DEQ to allow up to five years from the date EPA approves the Regional Haze SIP. 40 CFR § 51.308(e)(1)(iv).

On December 1, 2008, the Department issued the proposed Regional Haze proposal for public comment. The proposal includes new regulations that would require the installation of the controls identified below.

Limit (Assumed Control)	Installation Deadline	Authority
0.23 lb NO _x /MMBtu (Low-NO _x Burners/Overfire Air)*	7/1/2011	BART
0.12 lb SO ₂ /MMBtu 0.012 lb PM/MMBtu (Semi-Dry Scrubber)	7/1/2014	BART
0.070 lb NO _x /MMBtu (SCR)	7/1/2017	Reasonable Progress

* If LNB/OFA doesn't meet limit, SNCR required by 7/1/2014

² 40 CFR § 51.301 defines "in existence on August 7, 1977" as "meaning that the owner or operator has obtained all necessary preconstruction approvals or permits required by Federal, State, or local air pollution emissions and air quality laws or regulations and either has (1) begun, or caused to begin, a continuous program of physical on-site construction of the facility or (2) entered into binding agreements or contractual obligations, which cannot be cancelled or modified without substantial loss to the owner or operator, to undertake a program of construction of the facility to be completed in a reasonable time."

Mr. Brian Finneran
December 17, 2008
Page 3

The Department's proposed BART determination is consistent with the controls determined to be BART by PGE's experts. However, the schedule proposed for installation of the semi-dry scrubber system is shorter than that proposed by PGE. DEQ anticipates presenting the final BART determination package to the Environmental Quality Commission (EQC) at its April 2009 meeting. Assuming the EQC adopts the package in April 2009, it must then be submitted to EPA for approval into the State Implementation Plan (SIP). This process is anticipated to take a minimum of six months and more likely a year or longer. Assuming that EPA does not approve the Regional Haze SIP until July 1, 2010, the proposed rule does not provide all of the time allowed for PGE to install the semi-dry scrubbers.

Although all that is required of DEQ at this time is to promulgate BART, DEQ chose to go further and also impose a requirement under the future "Reasonable Progress" program. The first stage of the Regional Haze program is to determine and require BART. However, each state must subsequently develop a plan to ensure that by 2064 visibility is restored to pre-human levels in mandatory Class I areas (BART and Reasonable Progress controls are evaluated based on benefits to mandatory Class I areas only). Consistent with this requirement, states must submit SIPs containing emissions limits, schedules of compliance and other measures as may be necessary to make reasonable progress toward meeting the 2064 visibility goal. DEQ must also demonstrate to EPA every ten years that the state is making reasonable progress towards the ultimate visibility improvement goal. These "Reasonable Progress" demonstrations do not require any determination of controls on stationary sources at this time and we are aware of no western state making Reasonable Progress based control determinations at the same time that the state is making BART determinations. For example, California just released its draft Regional Haze SIP and it is proposing no stationary source Reasonable Progress control determinations. Nonetheless, the Department has proposed as part of this rulemaking that the Boardman plant be required to install additional NOx controls, specifically selective catalytic reduction (SCR), in 2017. These controls were demonstrated not to constitute BART due to their extreme cost and their limited effectiveness in addressing visibility impacts.

PGE has reviewed the Department's proposed BART and Reasonable Progress rules in light of this regulatory and statutory background. Based on our review, we have the following comments.

2. Comments on Proposed NOx BART Rule

NOx BART Limit Determination

Mr. Brian Finneran
December 17, 2008
Page 4

PGE supports the Department's NOx BART determination. The proposed NOx BART determination will reduce NOx from the Boardman plant by approximately 46% from current levels by preventing the formation of NOx in the first place. While this comes at a significant capital expense, we believe that these controls constitute BART and note that the Department's determination is consistent with BART determinations throughout the western U.S. We believe that the determination of feasible control level is aggressive and concur with the Department that it is appropriate to determine compliance with the 0.23 lb/MMBtu heat input limit based on a rolling 12-month average.

NOx BART Compliance Schedule

PGE generally supports the NOx BART installation schedule, but notes that compliance with these deadlines is dependent on EPA approving the Regional Haze SIP and DEQ approving the necessary preconstruction permits in a timely manner. Because of the need to know with certainty that the SIP is approved and the need for preconstruction permits prior to commencing construction, PGE is faced with potentially critical delays beyond its control. In order to avoid PGE being placed in the untenable position of having to proceed with millions of dollars worth of controls in the absence of clear regulatory or permit authority, PGE requests that DEQ add language authorizing the Department to delay installation of the controls in the event of delays beyond PGE's reasonable control. We recognize that under federal law the Department cannot extend the compliance deadline by more than five years after EPA approves the portion of the SIP containing the NOx BART limits.

Neither PGE nor the Department can have absolute certainty that EPA will approve the Regional Haze SIP. Therefore, PGE believes that it is critical to add language to the proposed rules specifying that if the Regional Haze SIP provisions relating to the NOx BART determination is disapproved that PGE is not required to proceed with installation of the controls as a matter of state rule. If EPA disapproves the SIP provisions mandating controls, that agency will presumably require some other approach. Therefore, we suggest that the proposed rules provide a mechanism for staying the control requirements in the event that EPA disapproves the SIP provisions mandating controls.

3. Comments on Proposed SO₂ BART Rule

SO₂ BART Limit Determination

Mr. Brian Finneran
December 17, 2008
Page 5

PGE supports the Department's SO₂ BART determination. The proposed SO₂ BART determination will reduce SO₂ from the Boardman plant by approximately 80% from current levels through the installation of a semi-dry scrubber system. While this technology comes at both a capital expense and generation efficiency penalty, we agree that these controls constitute BART and note that the Department's determination is consistent with or more aggressive than BART determinations throughout the western U.S. We concur with the Department that it is appropriate to determine compliance with the 0.12 lb/MMBtu heat input limit based on a rolling 30-day average basis.

SO₂ BART Compliance Schedule

PGE generally supports the SO₂ BART installation schedule, but notes that compliance with the deadline is also dependent on EPA approving the Regional Haze SIP and DEQ approving the necessary preconstruction permits in a timely manner. As noted above PGE needs to know with certainty that the SIP is approved and that it has all permits in hand prior to commencing construction of several hundred million dollars worth of control equipment. In addition, if EPA does not approve the portions of the Regional Haze SIP containing the SO₂ limits in a reasonable time frame then PGE will not have enough time to procure and install the controls. Therefore, we suggest that either DEQ change the installation deadline to be five years from the date of EPA approval of the relevant portions of the Regional Haze SIP or that DEQ add a provision to the rules extending the deadline to five years post-SIP approval in the event that EPA does not approve these portions of the SIP by the end of 2009.

Alternative SO₂ BART Determination

PGE also requests that DEQ add an alternative SO₂ BART determination to the proposed regulations. Section 169A(g) of the Clean Air Act specifies that BART determinations must take into account the remaining useful life of the BART eligible emission unit. See, also 40 CFR § 51.308(e)(1)(ii)(A). EPA stated that this factor should be accounted for in assessing the cost impacts of a particular control technology. 70 Fed. Reg. 39127 (July 6, 2005). In its November 2007 BART determination PGE noted that the possible premature cessation of operations of the coal-fired boiler may be appropriate for consideration in determining BART. Consistent with 40 CFR § 51, App Y Section IV(D)(4)(k) ("How do I take into account a project's 'remaining useful life' in calculating control costs"), PGE recognized the possibility that it might be necessary to include a regulatory scenario that anticipated the early closure of the Foster-Wheeler boiler. Based on the continued uncertainties about fuel cost/availability, replacement power, carbon regulation, control technologies and combustion technologies, PGE believes that

Mr. Brian Finneran
December 17, 2008
Page 6

including an alternative to the proposed BART determination is appropriate. EPA specifically anticipated sources needing flexibility and seeking alternatives, and addressed this possibility in Section IV(D)(4)(k)(3) of 40 CFR § 51, App Y. In evaluating the cost-effectiveness of the proposed SO₂ controls, PGE assumed that the controls would be in place and operational for twenty years. As a result, the annualized capital cost was amortized over the full twenty-year life of the control device. We believe that it is consistent with the Clean Air Act and EPA's regulations to include an alternate BART determination for SO₂ that reflects a shorter facility life than the twenty-year life assumed in the current evaluation.

Incorporating an alternative SO₂ BART determination into the Oregon BART rules provides PGE the flexibility needed to best protect its customers while protecting the environment. PGE is requesting the option to assume a federally enforceable permit limit requiring cessation of the Foster-Wheeler boiler operations by the end of 2020 in lieu of installing the semi-dry scrubbers. In order to ensure adequate time to incorporate the permit limit into its permit as well as to ensure that the permit limit was in place prior to the 2014 deadline for installing the SO₂ controls, PGE would need to apply for this federally enforceable limit no later than July 1, 2012. If PGE submitted an application requesting the condition by that date, and responded in a timely fashion to any Department requests, PGE would be required to terminate operation of the Foster-Wheeler boiler by 2020. Alternatively, if PGE did not submit an application by July 1, 2012 requesting the permit limit, PGE would be bound by the Department's proposed SO₂ BART compliance deadlines and would have to install the semi-dry scrubbers by July 1, 2014. Both options, including the requirement to submit the permit limit application by July 1, 2012, would be placed in the rules. PGE, with guidance from the Oregon Public Utilities Commission (OPUC) and stakeholders, would then need to decide no later than July 1, 2012 whether to install the SO₂ BART controls or cease operating the Foster-Wheeler boiler by the end of 2020.

Incorporating the recommended alternative SO₂ BART determination with the 2012 decision point into the Oregon BART rules is consistent with all federal requirements. As noted above, not only is there no prohibition on the Department incorporating alternative BART options, Appendix Y to the federal BART regulations states that alternatives are permissible so long as each option independently meets the BART criteria. 40 CFR § 51, App Y, Section IV(D)(4)(k). The 2020 alternative BART determination clearly meets the BART criteria. As noted above, the Clean Air Act requires consideration of the remaining useful life of the plant. EPA's rules recognize that if the remaining useful life is limited by permit condition then the cost-effectiveness needs to be determined based on amortizing the capital cost over the reduced equipment life. The cost-effectiveness of the semi-dry scrubbers based on a useful life of 6.5 years (i.e., the number of years after July 1, 2014 that the control would be operated if the Foster-

Mr. Brian Finneran
December 17, 2008
Page 7

Wheeler boiler ceased operation in 2020) is approximately \$5,200 per ton of SO₂ controlled (see attached spreadsheet for details of cost-effectiveness evaluation).³ This cost-effectiveness far exceeds the range of SO₂ cost-effectiveness evaluated by EPA in establishing the presumptive BART limits. In EPA's assessment they looked at costs ranging from \$400/ton to \$2,000/ton. The cost-effectiveness of the semi-dry scrubbers if operated only 6.5 years would be almost triple the high end of the range of what EPA considered cost-effective. Therefore, with only a 6.5-year operational life it is appropriate to consider BART to require no additional SO₂ controls so long as the Foster-Wheeler boiler is required to cease operation by the end of 2020. This determination would not affect the requirement to operate the NO_x BART controls and nor would it affect PGE's obligation to control mercury emitted from the boiler.

It is also appropriate to consider the alternative SO₂ BART determination in light of the long term benefits to the environment provided by both options. If the plant installed the proposed BART controls (i.e., low-NO_x burners, modified overfire air and semi-dry scrubbers) and operated through 2040, the aggregate visibility pollutant (i.e., NO_x, SO₂ and PM) emissions calculated on a potential to emit basis would total 336,358 tons.⁴ If the proposed NO_x/SO₂ BART controls and SCR were installed, the aggregate visibility pollutant emissions through 2040 would total 237,149 tons. If NO_x BART but no other controls were installed on the boiler and the boiler ceased operation at the end of 2020, 232,453 tons of visibility pollutants would be emitted. A comparison of the aggregate emissions is presented below.

Controls Installed	Boiler Operated Through	Total Visibility Pollutant Emissions (tons)			
		NO _x	SO ₂	PM	Aggregate
LNB/OFA	12/31/2020	63,588	158,311	10,554	232,453
LNB/OFA and SD scrubbers	12/31/2040	184,960	139,313	12,084	336,358
LNB/OFA, SD Scrubbers & SCR	12/31/2040	85,752	139,313	12,084	237,149

Notes: All computations start 1/1/2011; emissions calculations based on plant potential to emit.

³ Section 4(k)(2) of Appendix Y specifies that the remaining useful life of a control is the difference between the date the controls would go into place and the date the controlled unit permanently stops operation.

⁴ 2040 is the current projected life of the Foster-Wheeler boiler that was identified in PGE's BART analysis. However, there is no legal requirement to cease operation of the boiler at that time and the actual life of the boiler could be longer.

Mr. Brian Finneran
December 17, 2008
Page 8

These suggested revisions are consistent with the BART requirements, are environmentally beneficial and also provide additional benefits. As the Department knows, the electrical generation business is in a time of tremendous transition. Over the next decade we anticipate tremendous advances in both electricity generation and control technology (e.g., carbon capture and sequestration). In addition, we anticipate that carbon will become subject to regulation. The full costs and benefits of these changes cannot be fully assessed at this time. However, by the time that PGE must decide whether to apply for its federally enforceable condition requiring cessation of operation of the Foster-Wheeler boiler or install the SO₂ BART controls, both PGE and the OPUC likely will have a better idea of the best future for the Boardman plant. As the Department knows, PGE is also regulated by the OPUC, and resource decisions such as the installation of BART controls must be fully vetted in the OPUC's Integrated Resource Planning (IRP) process. That process includes extensive public and stakeholder input and detailed modeling of resource decisions to yield the best combination of expected costs and risks. By building this decision point into the BART rules, it will help ensure that the decisions regarding Boardman are made with the most complete information. By enabling a more comprehensive and reasoned decision making process on the future of Boardman we also anticipate that DEQ will reduce the fiscal impacts to businesses in Oregon as compared to the Department's proposed BART rules.

Startup, Shutdown and Malfunction Exemption

We appreciate the recognition in the proposed rules that the technology based limits do not apply during startups and shutdowns. EPA was clear in the BART regulations that startups and shutdowns were not normal operating conditions and that the BART visibility impact assessment was intended to assess normal operating conditions. Therefore, we believe that it is appropriate to not include periods of startup and shutdown in determining compliance. However, it is equally true that the controls cannot be anticipated to perform as designed during a malfunction (defined under federal law, see, e.g. 40 CFR 63.2, as an upset that is not reasonably foreseeable or preventable and not resulting from inadequate design or maintenance). Therefore, we suggest that the regulations similarly note that malfunction periods should similarly not be included when evaluating whether the controls are operating properly and compliance is being achieved.

PM Limit Error

The proposed BART rule identifies the PM limit as 0.12 lb/MMBtu heat input, but PGE's BART determination and the Department's documentation indicate that it should read "0.012 lb/mmBtu heat input." We believe this was just a typographical error.

Mr. Brian Finneran
December 17, 2008
Page 9

Recommended BART Rule Edits

For the reasons stated above, we request that section 1 of the proposed OAR 340-223-0030 (the Boardman BART rule) be revised as follows:

340-223-0030

BART Requirements for the Foster-Wheeler boiler at the Boardman Coal-Fired Power Plant (Federal Acid rain program facility ORISPL code 6106)

(1) Emissions limits:

(a) On and after July 1, 2011, nitrogen oxides emissions must not exceed 0.28 lb/mmBtu heat input as a 30-day rolling average and 0.23 lb/mmBtu heat input as a 12-month rolling average.

(A) If it is demonstrated by July 1, 2012 that the emission limits in (a) cannot be achieved with combustion controls, the Department may grant an extension of compliance to July 1, 2014.

(B) If an extension is granted, the nitrogen oxides emissions must not exceed 0.23 lb/mm Btu heat input as a 30-day rolling average on and after July 1, 2014.

(b) On and after July 1, 2014, sulfur dioxide emissions must not exceed 0.12 lb/mmBtu heat input as a 30-day rolling average.

(c) On and after July 1, 2014, particulate matter emissions must not exceed 0.012 lb/mmBtu heat input as determined by compliance source testing.

(d) The emission limits in (a) through (c) above do not apply during periods of startup, or shutdown or malfunction.

(e) The emission limits in (b) and (c) above do not apply if the operator has assumed a federally enforceable permit condition prior to July 1, 2014 requiring that the Foster-Wheeler boiler cease emissions by December 31, 2020. In order to ensure adequate time for the Department to process the permit modification by this deadline, the request for the federally enforceable permit condition must be submitted to the Department no later than July 1, 2012. If the permittee submits a permit application requesting the permit limit on or before July 1, 2012 and submits to all Department information requests associated with the application in a timely manner, the permittee shall be deemed to have the permit condition in place.

(f) The emission limits in (a), (b) and (c) above do not apply if EPA disapproves the portion of the Regional Haze SIP containing these limits or that portion of the Regional Haze SIP is otherwise invalidated.

Mr. Brian Finneran
December 17, 2008
Page 10

(g) If EPA fails to approve the portion of the Regional Haze SIP containing the emission limits and compliance deadlines in (b) and (c) above by December 31, 2009, then those deadlines shall automatically change to five years after approval of the portion of the Regional Haze SIP containing these limits and deadlines.

(h) The Department may extend the deadlines in (a), (b) and (c) above to account for delays beyond the reasonable control of the permittee, including delays in the issuance of permits authorizing construction of the controls. The Department may not extend the compliance deadline more than five years after the date that EPA approves the portion of the Regional Haze SIP containing these limits and deadlines.

4. Comments on Proposed Reasonable Progress Rule

SCR Is Not Justified by Reasonable Progress Requirements

PGE has significant concerns regarding DEQ's proposal that SCR is required under the Reasonable Progress program. In the November 2007 BART determination report, PGE demonstrated that SCR is not BART for the Boardman boiler. The technology is not cost-effective, does not provide material benefits to visibility in the mandatory Class 1 areas and has material non-air quality environmental impacts. For all these reasons DEQ reasonably concluded that SCR is not BART. Section 169A(g)(1) of the federal Clean Air Act mandates that the same considerations must be applied in determining what constitutes Reasonable Progress controls. Therefore, for the same reasons that DEQ determined that SCR did not constitute BART, it should not consider SCR to be required by Reasonable Progress.

DEQ Has No Basis For Imposing Reasonable Progress Requirements on Boardman At This Time

PGE is similarly concerned about DEQ's choice to proceed at this time with a Reasonable Progress determination for the Boardman Plant while not considering Reasonable Progress for any other emission sources in Oregon. We are not aware of any other state in the western U.S. addressing additional controls under Reasonable Progress at this time. The Reasonable Progress assessment in the Department's proposed Regional Haze SIP states that "it is not reasonable to require controls" for any of the stationary source categories reviewed and notes that the Department will be developing guidance for conducting Reasonable Progress control

Mr. Brian Finneran
December 17, 2008
Page 11

determinations over the next five years. Proposed Regional Haze Plan at 171. Putting aside the fact that for the reasons stated in the previous paragraph SCR does not meet the Reasonable Progress guidelines established by statute and EPA guidance, it is arbitrary for DEQ to single out one source for a program that is otherwise in its nascent stages and where no other source in the state is under consideration. For these reasons we propose that DEQ not include the Reasonable Progress component in the BART rules. DEQ can address Reasonable Progress for the Boardman plant when it develops its Reasonable Progress SIP for the state as a whole.

Alternative Reasonable Progress Determination

Even if DEQ were to proceed with Reasonable Progress at this time for the Boardman Plant and SCR was determined to constitute a Reasonable Progress control, we believe that DEQ should include an alternative determination similar to what is proposed above for BART. EPA's June 2007 EPA Reasonable Progress guidance states:

"The fourth statutory factor is 'the remaining useful life of any existing source subject to [reasonable progress] requirements.' This factor is generally best treated as one element of the overall cost analysis. The "remaining useful life" of a source, if it represents a relatively short time period, may affect the annualized costs of retrofit controls. For example, the methods for calculating annualized costs in EPA's *Air Pollution Control Cost Manual* require the use of a specified time period for amortization that varies based upon the type of control. If the remaining useful life of the source will clearly exceed this time period, the remaining useful life factor has essentially no effect on control costs and on the reasonable progress determination process. Where the remaining useful life of the source is less than the time period for amortizing the costs of the retrofit control, you may wish to use this shorter time period in your cost calculations."

This statement supports a similar approach to that required under BART where a shorter facility life is taken into account when determining cost-effectiveness. In evaluating the cost-effectiveness of SCR, PGE assumed that the controls would be in place and operational for twenty years. As a result, the annualized capital cost was amortized over the full twenty-year life of the control device. We believe that it is consistent with the Clean Air Act and EPA's regulations to include an alternate Reasonable Progress determination for NOx that reflects a shorter facility life.

Mr. Brian Finneran
December 17, 2008
Page 12

If DEQ proceeds with requiring SCR as Reasonable Progress, PGE recommends incorporating an option under which PGE may assume a federally enforceable permit limit requiring cessation of the Foster-Wheeler boiler operations by 2029. In order to ensure adequate time to incorporate the permit limit into its permit as well as to ensure that the permit limit is in place prior to the 2017 deadline currently proposed for installing SCR, PGE would need to apply for this federally enforceable limit no later than July 1, 2015. If PGE submitted an application requesting the condition by that date, and responded in a timely fashion to any Department requests, it would be required to terminate operation of the Foster-Wheeler boiler by 2029. Alternatively, if PGE did not submit an application by July 1, 2015 requesting the permit limit, PGE would be bound by the Department's proposed Reasonable Progress NO_x control compliance deadline and would have to install SCR by July 1, 2017. Both options, including the requirement to submit the permit limit application by July 1, 2015, would be placed in the rules. PGE, with guidance from the OPUC and stakeholders, would then need to decide no later than July 1, 2015 whether to install SCR or cease operating the Foster-Wheeler boiler by the end of 2029.

Incorporating the recommended option into the Oregon Reasonable Progress rules is consistent with all federal requirements. As with BART, there is no prohibition on the Department incorporating alternative Reasonable Progress options so long as each option independently meets the Reasonable Progress criteria. The alternative Reasonable Progress option clearly meets all the statutory and regulatory criteria. As noted above, the Section 169A of the federal Clean Air Act requires consideration of the remaining useful life of the plant for both BART and Reasonable Progress determinations. EPA's rules recognize that if the remaining useful life is limited by permit condition then the cost-effectiveness needs to be determined based on amortizing the capital cost over the reduced equipment life. 40 CFR 51, App. Y Section IV(D)(4)(k). The cost-effectiveness of the SCR based on a useful life of 12.5 years (i.e., the number of years after July 1, 2017 that the control would be operated if the plant had to close by the end of 2029) is over \$7,300 per ton of NO_x controlled. This cost-effectiveness far exceeds the range of NO_x cost-effectiveness evaluated by EPA in establishing the presumptive BART limits. In EPA's assessment they looked at costs ranging from \$100/ton to \$1,000/ton. The cost-effectiveness of the SCR if operated only 12.5 years would be over seven times greater than the high end range of what EPA considered cost-effective. Therefore, with only a 12.5-year operational life it is appropriate to consider the cessation of operation of the Foster-Wheeler boiler by the end of 2029 to constitute Reasonable Progress. This determination would not affect the requirement to operate the NO_x and SO₂ BART controls and nor would it affect PGE's obligation to control mercury from the boiler.

Mr. Brian Finneran
December 17, 2008
Page 13

It is also appropriate to consider the alternative of cessation of the Foster-Wheeler boiler operations at the end of 2029 to be Reasonable Progress in light of the long term benefits to the environment provided by both options. If the plant installed the proposed BART controls (i.e., low-NOx burners, modified overfire air and semi-dry scrubbers) and operated through 2040, the aggregate visibility pollutant emissions calculated on a potential to emit basis would total 336,358 tons. If the BART controls and SCR were installed, the aggregate visibility pollutant emissions through 2040 would total 237,149 tons. If the BART controls were installed on the boiler, no SCR was installed, and the boiler ceased operation at the end of 2029, then 231,292 tons of visibility pollutants would be emitted. By not installing the SCR, a material quantity of ammonia emissions would be avoided. A comparison of the aggregate emissions is presented below.

Controls Installed	Boiler Operated Through	Total Emissions (tons)			
		NOx	SO ₂	PM	Aggregate
LNB/OFA and SD scrubbers	12/31/2029	118,208	104,485	8,602	231,292
LNB/OFA and SD scrubbers	12/31/2040	184,960	139,313	12,084	336,358
LNB/OFA, SD Scrubbers & SCR	12/31/2040	85,752	139,313	12,084	237,149

Notes: All computations start 1/1/2011; emissions calculations based on plant potential to emit.

These suggested revisions are consistent with the Reasonable Progress requirements, are environmentally beneficial and also provide additional benefits. As we discussed above, the electrical generation business is in a time of tremendous transition. Over the next decade we anticipate tremendous advances in both electricity generation and control technology (e.g., carbon capture and sequestration). In addition, we anticipate that carbon will become subject to regulation. The full costs and benefits of these changes cannot be fully assessed at this time. However, by the time that PGE must decide whether to apply for its federally enforceable condition requiring cessation of operation of the Foster-Wheeler boiler or install SCR, both PGE and the Oregon Public Utilities Commission will have a much better idea of the best future for the Boardman plant. By building this decision point into the Reasonable Progress rules, it is possible to ensure that the decisions regarding Boardman are made with the most complete information. By enabling a more comprehensive and reasoned decision making process on the future of Boardman we also anticipate that DEQ will reduce the fiscal impacts to businesses in Oregon as compared to the Department's proposed rulemaking.

Mr. Brian Finneran
December 17, 2008
Page 14

Startup, Shutdown and Malfunction Exemption

As noted above in relation to the BART controls we appreciate the recognition in the proposed rules that the technology based Reasonable Progress limit does not apply during startups and shutdowns. EPA was clear in the BART regulations that startups and shutdowns were not normal operating conditions and that the BART visibility impact assessment was intended to assess normal operating conditions. Therefore, we believe that it is appropriate to not include periods of startup and shutdown in determining compliance. However, it is equally true that the controls cannot be anticipated to perform as designed during a malfunction (defined under federal law as an upset that is not reasonably foreseeable or preventable and not resulting from inadequate design or maintenance). Therefore, we suggest that the regulations similarly note that malfunction periods should similarly not be included when evaluating whether the controls are operating properly and compliance is being achieved.

For the reasons stated above, we request that the proposed OAR 340-223-0040 (the Boardman Reasonable Progress rule) be revised as follows:

340-223-0040

Additional NO_x Requirements for the Foster-Wheeler boiler at the Boardman Coal-Fired Power Plant (Federal Acid rain program facility ORISPL code 6106)

(1) On and after July 1, 2017, nitrogen oxides emissions must not exceed 0.070 lb/mmBtu heat input, excluding periods of startup, ~~or~~ shutdown or malfunction.

(a) Compliance with the NO_x emissions limit must be determined with a continuous emissions monitoring system in accordance with OAR 340-223-0030(2) and (3).

(b) The Department must be notified in writing within 7 days after any control equipment used to comply with the emission limit begins operation.

(c) A compliance status report, including CEMS data, must be submitted by January 1, 2018.

(d) The emission limit in (1) above does not apply if the operator has assumed a federally enforceable permit condition prior to July 1, 2017 requiring that the Foster-Wheeler boiler cease emissions by December 31, 2029. In order to ensure adequate time for the Department to process the permit modification by this deadline, the request for the federally enforceable permit condition must be submitted to the Department no later than July 1, 2015. If the permittee submits a permit application

Mr. Brian Finneran
December 17, 2008
Page 15

requesting the permit limit on or before July 1, 2015 and submits to all Department information requests associated with the application in a timely manner, the permittee shall be deemed to have the permit condition in place.

(e) The emission limit in (1) above does not apply if EPA disapproves the portion of the Regional Haze SIP containing that limit or that portion of the Regional Haze SIP is otherwise invalidated.

(f) If EPA fails to approve the portion of the Regional Haze SIP containing the emission limit and compliance deadline in (1) above by December 31, 2009, then those deadlines shall automatically change to eight years after approval of the portion of the Regional Haze SIP containing these limits and deadlines.

5. Conclusion

Attached please find spreadsheets documenting the cost-effectiveness values stated in our comments above as well as the comparative emissions between the different BART and Reasonable Progress alternatives. Please consider these spreadsheets to be an addendum to our November 2007 report. You will also find a flow diagram that visually presents the proposed alternative BART and Reasonable Progress determinations.

Thank you for your consideration of these comments. As you know, the OPUC and PGE must engage in a public IRP process that includes considering alternatives to the emission controls. By incorporating the BART and Reasonable Progress alternatives discussed above DEQ will better align the DEQ and OPUC processes. This protects the best interests of PGE, its customers and the Oregon economy while also satisfying all state and federal requirements, including protection of Oregon air quality. Therefore, we believe that it provides an important improvement to the proposed rules. We hope that DEQ will recognize these benefits, incorporate our suggested edits into the proposed rule and re-notice the package so as to enable the greatest degree of public participation.

2033	0.23	6,069	0.60	15,831	0.04	1,055	22,955	530,869
2034	0.23	6,069	0.60	15,831	0.04	1,055	22,955	553,824
2035	0.23	6,069	0.60	15,831	0.04	1,055	22,955	576,779
2036	0.23	6,069	0.60	15,831	0.04	1,055	22,955	599,734
2037	0.23	6,069	0.60	15,831	0.04	1,055	22,955	622,689
2038	0.23	6,069	0.60	15,831	0.04	1,055	22,955	645,644
2039	0.23	6,069	0.60	15,831	0.04	1,055	22,955	668,599
2040	0.23	6,069	0.60	15,831	0.04	1,055	22,955	691,554

Calculations:

(a) NOx emission rate (lb/MMBTU) = [2007 NOx emissions (tons)] / [2007 annual heat input (MMBtu)] * 2000

2007 NOx emissions (tons) = 10,656 (1)
2007 Heat Input (MMBtu) = 46,913,216 (2)

(b) SO2 emission rate (lb/MMBTU) = [2007 SO2 emissions (tons)] / [2007 annual heat input (MMBtu)] * 2000

2007 SO2 emissions (tons) = 14,037 (1)
2007 Heat Input (MMBtu) = 46,913,216 (2)

(c) PM emission rate (lb/MMBTU) = [2007 PM emissions (tons)] / [2007 annual heat input (MMBtu)] * 2000

2007 PM emissions (tons) = 853 (1)
2007 Heat Input (MMBtu) = 46,913,216 (2)

(d) Annual emissions (tons/yr) = [emission rate (lb/MMBTU)] * [2007 hourly heat input (MMBTU/hr)] * [future operating hours (hours)] / 2000

2007 Heat Input (MMBTU/hr) = 6,024 (3)
Future Operating Hours = 8,760

Notes:

- (1) Portland General Electric's 2007 Annual Title V Report
- (2) US EPA Clean Air Markets
- (3) Based on US EPA Clean Air Markets reported annual heat input / 2007 annual operating hours (7,787)

Table 3 - LNB/OFA Installed in 2011, SDA/FF Installed in 2014 (No SCR)

Executive Summary

The Boardman Plant is a 584 megawatt (MW) net pulverized coal fired steam electric plant of more than 250 million British thermal unit (MMBTU) per hour heat input located near Boardman, Oregon, about 150 miles east of Portland. The plant was issued its construction authorization on February 27, 1975 by the Oregon Nuclear and Thermal Energy Council.

On July 6, 2005, the Environmental Protection Agency (EPA) issued its final *Regional Haze Regulations and Guidelines for Performing Best Available Retrofit Technology (BART) Determinations*. These rules/guidelines established a procedure for identifying those sources that must retrofit their existing facilities with BART and for determining what constitutes BART. The purpose of the BART program was to require controls, where appropriate, for facilities that were “grandfathered” from the new source review requirements of the 1977 Clean Air Act Amendments. Specifically, the BART rules apply exclusively to sources within one of the enumerated source categories that were in existence prior to August 7, 1977.

Because the Boardman Plant is a steam electric plant of more than 250 MMBTU per hour heat input that was in existence (as that term is defined by EPA) before August 7, 1977, it was identified by the Oregon Department of Environmental Quality (DEQ) as a BART source. Portland General Electric (PGE) volunteered to serve as the pilot source for DEQ’s BART determination process. This analysis has been prepared in accordance with the five-step process identified in the EPA’s *Regional Haze Regulations and Guidelines for Performing BART Determinations* (40 CFR Part 51, Appendix Y) to evaluate the best available retrofit control technologies for the reduction of nitrogen oxides (NO_x), sulfur dioxide (SO₂), and particulate matter (PM) emissions from the Boardman Plant.

The five-step BART analysis was used to generate the information needed to identify the best control technology package that constitutes BART for the Boardman Plant. In Step 1, available NO_x, SO₂, and PM retrofit control technologies were identified for the Boardman Plant. In Step 2, this list was shortened by eliminating those technologies that are not considered technically feasible. In Step 3, the control effectiveness of each technically feasible control technology was evaluated and, based on this evaluation, the technologies were ranked in order of effectiveness. In Step 4, the cost, energy, and environmental impacts were evaluated for each technically feasible control technology. In the final step, the visibility improvements associated with the top-ranked options were evaluated consistent with the modeling protocol approved by DEQ on January 18, 2007 and amended on August 28, 2007.

NO_x Control Selection

After all of the statutory factors were considered, the NO_x controls combination of new low NO_x burners with modified overfire air and selective noncatalytic reduction (NLNB/MOFA/SNCR) was identified as the Best Available Retrofit Technology for NO_x control. This NO_x control combination results in significant modeled visibility improvement at the Class 1 areas for Boardman Plant impacts.

An alternative NO_x control package that utilizes selective catalytic reduction (SCR) in lieu of SNCR was considered, but ultimately determined to have excessive impacts and so eliminated from consideration as BART. The controls combination of new LNBS with modified OFA and SCR (NLNB/MOFA/SCR) would result in greater NO_x reductions and slightly better modeled visibility improvements than NLNB/MOFA/SNCR. However, as EPA recognized in the 2005 preamble, the modeling system required for evaluating visibility impacts magnifies and overstates those impacts. Therefore, the small incremental improvement between the NO_x controls incorporating SNCR and the NO_x controls incorporating SCR is not, by itself, determinative. In addition, the use of the NO_x controls incorporating SCR has other impacts that are more severe than new LNBS with modified OFA system and SNCR. Specifically, the non-air quality environmental impacts (i.e., hazardous material disposal during catalyst replacement) and the energy impacts (i.e., significant fan auxiliary power to overcome additional system resistance) associated with NLNB/MOFA/SCR are higher than for NLNB/MOFA/SNCR.

The economic impacts also support selecting NLNB/MOFA/SNCR as BART. The economic impacts associated with the NLNB/MOFA/SCR alternative are considerably higher than the economic impacts associated with the NLNB/MOFA/SNCR alternative. The total capital cost of the NO_x controls incorporating SNCR is approximately \$50 million while the total capital cost associated with the NO_x controls including SCR is approximately \$223 million. Operating costs are similarly much higher with the SCR alternative than the SNCR alternative (\$5.7 million per year as opposed to \$2.4 million per year). However, the visibility improvements associated with the NO_x controls incorporating SCR are not commensurate with the additional \$173 million in capital cost (as compared to the NO_x controls incorporating SNCR). Even if the plant were assumed to operate at its highest daily emission rate for every day of the year (something that never occurs), the use of the NO_x control package with SCR as opposed to that with SNCR, would result in only 7 fewer days per year where Mt Hood Wilderness Area visibility impacts exceeded 0.5 deciviews. The additional \$173 million capital cost and \$3.3 million per year of operating cost associated with the SCR control

package is not justified by the minimal benefit. This limited benefit carries across all of the Class I areas. The average 98th percentile impact level across all the Class I areas is only 0.27 deciviews better with the control option incorporating SCR than the control option incorporating SNCR. This equates to an incremental annualized control cost associated with moving from the NO_x controls with SNCR to the NO_x controls with SCR of approximately \$72 million per deciview (based on an annualized cost of \$27 million/year for package with SCR v. \$7 million per year for package with SNCR). Again, the minimal improvement in visibility associated with the NO_x control option incorporating SCR does not justify the extreme incremental cost. This conclusion is confirmed through reference to the EPA cost-effectiveness recommendations. The cost effectiveness of the NO_x control package incorporating SCR (\$3,096/ton) is significantly higher than the range (\$100 to \$1000/ton) considered reasonable in EPA's BART guidelines.

Consideration of the impact of requiring SCR on plant viability also supports the conclusion that BART for NO_x constitutes the control package with SNCR. The EPA Guidelines state that it is appropriate to take into account the affordability of particular controls as part of the BART analysis where the cost of installing and operating the controls is judged to have a severe impact on plant operations. That would be the case were BART considered to include SCR. The Boardman Plant is a key resource for providing baseload power to the region throughout the year. The imposition of SCR as BART, on top of the \$300 million in air pollution control capital investments being proposed, could possibly require an investment in excess of what the plant can support. Under such circumstances the EPA Guidelines state that it is appropriate to consider the non-affordability of SCR and to therefore conclude that SCR is not BART. Based on the discussion within this report there is no need to rely on this factor to conclude that BART does not include SCR. However, this additional consideration lends further support to the conclusion that BART for NO_x constitutes the control package with SNCR.

From a design standpoint, since the Boardman boiler was not designed with space in the ductwork or with an appropriate temperature profile for utilization of SCR, very challenging and complex modifications to the boiler would be required at significant cost to lower the gas path temperature to the desired range while maintaining combustion efficiency. Therefore, a balancing of the statutory factors strongly supports NLNB/MOFA/SNCR as the best alternative.

SO₂ Control Selection

After all of the statutory factors were considered, the semi-dry flue gas desulfurization (semi-dry FGD) technology was determined to be the best BART alternative for SO₂ control. The two top SO₂ control technologies (wet FGD and semi-dry FGD) were modeled as having essentially the same level of visibility improvement at the Class I areas. However, the non-air quality environmental impacts and negative energy impacts are significantly greater for the wet FGD control technology, since it generates a visible plume, consumes more water, generates a wastewater stream requiring treatment and disposal, generates slightly more solid byproducts for landfill, and because the wet FGD requires significantly more auxiliary power consumption during operation. The economic impacts associated with the wet FGD are also much higher than the economic impacts associated with the semi-dry FGD. The costs associated with installing semi-dry FGD are very high, with a total capital cost of approximately \$247 million and operating costs of approximately \$13 million per year. While these costs are extremely high, the costs of the wet FGD system would be considerably higher with a total capital cost of approximately \$382 million and operating costs of approximately \$16 million per year. As a result, the cost effectiveness of the wet FGD control option is significantly higher than the range (\$400 to \$2000/ton) considered to be reasonable in EPA's BART guidelines. Given that wet FGD does not perform materially better than semi-dry FGD, there is no basis for spending the additional \$135 million in capital and \$3 million per year in operating expenses to implement the wet FGD technology. Therefore, consistent with the statutory factors, semi-dry FGD was chosen as the best alternative for SO₂ control.

Particulate (PM) Control Selection

After all of the statutory factors were considered, the pulse jet fabric filter (PJFF), in combination with the existing ESP, was determined to be the best BART control alternative for PM. Multiple technologies had equal control effectiveness, but the utilization of PJFF enables the highest level of mercury control. This improvement to water quality from reduction of mercury bioaccumulation is a significant positive environmental benefit and, therefore, supports the choice of PJFF as BART.

Best Control Combination Selection

The package of the selected controls (NLNB/MOFA/SNCR for NO_x and semi-dry FGD including PJFF for SO₂ and PM) constitutes BART for the Boardman Plant. This also constitutes the most effective package for integration with the controls being

designed for the Boardman Plant to meet the Oregon mercury standards for coal fired power plants.

While the Columbia River Gorge National Scenic Area (CRGNSA) is not a Class I area and so not a part of the BART analysis, there was interest in the benefits to that area as a result of the proposed BART controls. The modeling of the benefits predicted from the proposed BART control package show significant improvement in visibility in the CRGNSA. While slightly greater improvements are shown by the model from the use of a control package that includes SCR, these improvements are not considered significant. This conclusion was independently verified in the draft *Columbia River Gorge Air Quality Study Science Summary Report* (September 27, 2007) prepared by DEQ in conjunction with other state and federal governmental authorities. The report authors compared CRGNSA visibility as a result of the proposed BART controls (i.e., NLNB/MOFA/SNCR, semi-dry FGD and PJFF) to CRGNSA visibility if Boardman emissions were reduced to "0" (i.e., complete shutdown of the plant). As the report notes, "practically zero" additional visibility benefit is achieved by reducing plant emissions from those achieved by the proposed BART control package all the way to zero plant emissions.

That assessment serves as independent verification of the conclusion that no material visibility benefit would be gained by controlling NO_x through the use of new LNB with modified OFA and SCR rather than new LNB with modified OFA and SNCR. If eliminating the Boardman Plant generates "practically zero" additional benefit as compared to the proposed BART control package, the much smaller incremental benefit achieved by requiring SCR rather than SNCR would be immaterial. Given the extreme incremental cost associated with the use of new LNB with modified OFA and SCR for NO_x control, there is no technically sound basis for requiring SCR as part of the BART control package.

PGE's implementation of the suite of BART controls identified through this report will cost more than \$297 million dollars to install and approximately \$15 million per year to operate. While this poses a significant economic impact to the Boardman Plant and to Northwest electric utility customers, the controls are predicted to improve the plant's modeled worst-case visibility impacts in the Class I areas by an average 64 percent, improve the plant's modeled worst-case visibility impacts at the most severely impacted Class I area by 56 percent, and enable the enhanced control of mercury emissions. Therefore, the utilization of the NLNB/MOFA/SNCR and semi-dry FGD (including PJFF) is the best alternative and constitutes BART.

44										
45	Notes:									
46	Note 1 - Due to model escalation of O&M, the average projected annual cost for O&M and Transmission costs of \$4,136,228 for									
47	FY2010-2015 stated in real 2010 dollars in the Program Case amount was increased by \$ 1,066, so that the average annual									
48	escalated costs during the rate test period were equal to the average Program Case costs. This adjustment is necessary to ensure									
49	that these costs are similar between the Program Case and the 7(b)(2) Case. This adjustment results in the sum of O&M and									
50	Transmission Costs for FY 2010 being decreased by (\$ 22,215). The FY 2010 adjusted amount of \$4,137,294 is then escalated									
51	in the rates model using the Cumulative GDP Inflation/Deflation values that are reflected in the table below.

FY 2010	\$39.05	1.000000	39.05	4,789,092	4,978,418	189,326
FY 2011	\$39.05	1.020232	38.28	4,789,092	5,079,142	290,050
FY 2012	\$40.50	1.041582	38.88	4,966,920	5,185,431	218,511
FY 2013	\$44.25	1.062788	41.64	5,426,820	5,291,003	(135,817)
FY 2014	\$45.50	1.084313	41.96	5,580,120	5,398,164	(181,956)
FY 2015	\$48.00	1.106094	43.40	5,886,720	5,506,599	(380,121)
Averages	\$42.73		40.53	5,239,794	Total Difference	(7)
Program Case Price Adjustment - Note 3			0.0600	(261,376)		
7(b)(2) Case Pricing - 2010\$\$			40.59	4,978,418		
Projected Average Annual Energy Output ³				122,640		
Cost per MWh				40.593757		

Notes:

Note 1 - Projected Contract Pricing MWh - \$39.05 at contract cap rate, cost of power is expected to be at the current contract cap during the remaining years of the current contract that expires on September 30, 2011. Only one month in FY 2007 and one month in FY 2008 were billed at a rate below the contract cap.

Note 2 - Projected new contract's floor and cap amounts are projected to be \$35.50/MWh and \$55.50/MWh respectively, with a midpoint price of \$45.50/MWh. This represents a 42% increase over the current contract pricing when comparing the contract cap limits. It is anticipated that the new power purchase contract would cover the ten-year period 10/01/11 through 09/30/21. Projected average prices for the last 4-years of the rate test period under the projected new contract terms:

- FY 2012 - \$40.50 - Average price between the floor of \$35.50 and the midpoint of \$45.50.
- FY 2013 - \$44.25 - 25% of the time the pricing would be between the floor price of \$35.50 and the midpoint price of \$45.50, and 75% of the time it would be at the midpoint of \$45.50.
- FY 2014 - \$45.50 - Average pricing for the year would approximate the contract midpoint value of \$45.50
- FY 2015 - \$48.00 - 75% of the time the price would be at the midpoint price of \$45.50, and 25% of the time it would be between the midpoint price of \$45.50 and the contract cap amount of \$55.50.

74		2004	110,924	46.05%					
75		2005	119,434	49.58%					
76		2006	140,771	58.44%					
77		2007	140,898	58.49%					
78		2008	115,508	47.95%					
79		7-Year Average	121,747	50.54%		13.90			
80									
81									
82	Table A-4: Regional Independent Hydro Projects, PNW Loads and Resource Study, 2009 -								
83	2010 Fiscal Years, [51] 2007 Final Supplemental Rate Case (Final), 1937 Water Year, 2009								
84		Projected annual hydro production for Idaho Falls Resource = 14.0 aMW 8,760 =						122,640	
86		Capacity Amount at 27.5aMW						240,900	
87									
88	Note 4 - The current rate case model's section 7(b)(2) resource stack does not have the ability to model different								
89	annual price or quantity amounts. Due to rate case model escalation of O&M (escalation of the first year price								
90	amount by annual inflation), the average annual power purchase cost was decreased from \$5,239,418 to \$4,978,418,								
91	a difference of (\$261,376). This resulted in a increase in the projected average annual cost per MWh to \$40.59								
92	from \$40.53 (stated in 2010 \$) that is applicable to the 7(b)(2) Case amount. This adjustment was necessary so								
93	that the average escalated rate during the rate test period was equal to the average Program Case rate, so that								
94	the average cost for this resource was similar between the Program Case and the 7(b)(2) Case.

This POWER PURCHASE AGREEMENT (Agreement) is executed by the UNITED STATES OF AMERICA, Department of Energy, acting by and through the BONNEVILLE POWER ADMINISTRATION (BPA) and the CITY OF IDAHO FALLS, doing business as IDAHO FALLS POWER (Idaho Falls) a municipal corporation organized under the laws of the State of Idaho. BPA and Idaho Falls are sometimes referred to individually as "Party" and collectively as "Parties."

RECITALS

BPA is authorized by Federal law, including the Pacific Northwest Electric Power Planning and Conservation Act (Public Law 96-501, the "Northwest Power Act") and other applicable laws, to dispose of electric power generated at various Federal hydroelectric projects in the Pacific Northwest or acquired from other resources.

Idaho Falls owns and operates hydro generation units in and around the City of Idaho Falls collectively known as the Bulb Turbine Project (Project). BPA currently purchases all of the Project power output under Power Purchase Agreement No. 00PB-10710 as amended, which terminates at 2400 hours on September 30, 2006.

The Parties agree:

1. TERM

This Agreement shall take effect on the date signed by BPA and Idaho Falls. Power deliveries shall commence on the hour beginning 0000 on October 1, 2006, and continue through the hour ending 2400 on September 30, 2011.

2. DEFINITIONS

Capitalized terms in this Agreement shall have the meanings defined below, in the exhibits or in the body of this Agreement.

- (a) "Contracted Power" means the metered, monthly Project Power Output minus the monthly Station Service, both in MWh, delivered to BPA at the Point of Receipt.
- (b) "Federal System" means the facilities of the Federal Columbia River Power System, including the Federal generating facilities for which BPA is designated as marketing agent; the federal facilities under the jurisdiction of BPA; and any other facilities:
 - (1) from which BPA receives all or a portion of the generating capability (other than Station Service) for use in meeting BPA's loads to the extent BPA has the right to receive such capability.
 - (2) which BPA may use under contract or license; or
 - (3) to the extent of the rights acquired by BPA pursuant to the 1961 U.S.-Canada Treaty relating to the cooperative development of water resources of the Columbia River Basin.
- (c) "Operating Year" means the period that begins each August 1 and which ends the following July 31. For instance, Operating Year 2007 begins August 1, 2006, and continues through July 31, 2007.
- (d) "Point of Receipt" means the point in Idaho Falls' Sugarmill Substation where the 46 kV facilities of Idaho Falls and Rocky Mountain Power

(formally PacifiCorp and Utah Power & Light), or its successor, are connected, where Contracted Power will be made available to BPA.

- (e) "Alternate Points of Receipt" (APOR) means the point in Idaho Falls' (1) Westside Substation where the 46 kV facilities of Idaho Falls and the Rocky Mountain Power are connected or the (2) Project's individual units' high-side transformer buses at 46kV.
- (f) "Power Business Line" or "PBL" means that portion of the BPA organization or its successor that is responsible for the management and sale of BPA's Federal power.
- (g) "Project" means the four hydro generation units owned and operated by Idaho Falls Power in and around the City of Idaho Falls collectively known as the Bulb Turbine Project *pursuant* to FERC Project No. 2842. The Project has a combined capacity of 24,600 kW. Specifically the units are: (1) Upper Plant, located at river mile 805, with a 7,200 kW nameplate capacity; (2) City Plant, located at river mile 800, with a 7,200 kW nameplate capacity; (3) Lower Plant, located at river mile 798, with a 7,200 kW nameplate capacity; and (4) Old Lower Plant, located at river mile 798, 2 units with a combined 3,000 kW installed capacity.
- (h) "Project Power Output" means the amount of energy generated by the Project during any specified period of time as metered at the Points of Measurement.
- (i) "Points of Measurement" means the four meters described in Exhibit A.
- (j) "Prudent Utility Practice" means the practices, methods, and equipment, as changed from time to time, that are commonly and lawfully used in prudent engineering and operation of equipment, taking into consideration: (1) the fact that Idaho Falls is a municipal corporation under the laws of the State of Idaho with the statutory duties and responsibilities thereof; and (2) the objectives to integrate the Project with the generating resources of the Federal System, to achieve optimum utilization of such resources, and to achieve efficient and economical operation of such system.
- (k) "Station Service" means the power used to serve load at the Project's facilities, including but not limited to light, space conditioning and the operation of auxiliary equipment.
- (l) "Workday" means, for the purpose of scheduling, a day that the Parties both observe as a regular workday.

3. SALE AND PURCHASE OF PROJECT POWER OUTPUT

(a) **Power Amount**

Idaho Falls shall make available and BPA shall purchase all of the Contracted Power at the Point of Receipt for the period specified in Section 1 of this Agreement. BPA shall pay Idaho Falls the Contract Price for Contracted Power pursuant to Section 3(b).

(b) **Contract Price**

Subject to the Cap and Floor provision of Section 3(c), the Contract Price for any calendar month shall be calculated in accordance with the following methodology:

- (1) Daily Dow Jones Mid-C (DJ Mid-C) heavy load and light load hour (heavy and light load hours as specified by the then current National Electric Reliability Council (NERC) or its successor's standards) prices will be weighted to develop a daily average DJ Mid-C price. The prices will be weighted by summing (a) the product of the number of heavy load hours and the daily DJ Mid-C heavy load hour price minus \$1.00 and (b) the product of the number of light load hours and the daily DJ Mid-C light load hour price minus \$1.00; and dividing the resulting sum by the number of hours in the day to create a daily average DJ Mid-C price.
- (2) The daily average DJ Mid-C price shall be multiplied by that day's Project Power Output to derive a daily weighting factor.
- (3) The daily weighting factors shall be summed for all days in the calendar month.
- (4) The Contract Price is derived by dividing the sum of the weighting factors by the monthly Project Power Output.
- (5) Exhibit B illustrates this process.

(c) **Cap and Floor of Contract Price**

For any calendar month, the Contract Price shall not exceed \$39.05 per MWh (cap) or be less than \$29.05 per MWh (floor).

(d) **Loss of the Dow Jones Mid-C Index**

In the event that the Dow Jones Mid-C Index ceases to be available to establish the price for the power pursuant to this Agreement, the Parties shall use the ICE (Intercontinental Exchange) Daily Indices for power delivered at Mid-C. In the event that the ICE Daily Indices cease to be available to establish the price for the power pursuant to this Agreement, the Parties shall have 90 days in which to agree on a new index. The last price calculated from the Dow Jones Mid-C Index or the ICE Daily Indices pursuant to this section 3(d) shall apply during that 90-day period.

Exhibit B
Contract Price Methodology

The Contract Price for any calendar month shall be based on the day-ahead Dow Jones Mid-C Index (DJ Mid-C) prices for firm power, and shall be weighted to each day's Project Power Output, in accordance with the following methodology:

- Daily DJ Mid-C heavy load and light load hour (heavy and light load hours as specified by the then current NERC Standards) prices will be weighted to develop a daily average DJ Mid-C Price. The prices will be weighted by summing (a) the product of the number of heavy load hours and the daily Mid-C heavy load hour price minus \$1.00 and (b) the product of the number of light load hours and the daily Mid-C light load hour price minus \$1.00; and dividing the resulting sum by the number of hours in the day to create a daily average DJ Mid-C price.
- The daily average DJ Mid-C Price shall be multiplied by that day's Project Power Output to derive a daily weighting factor.
- The daily weighting factors shall be summed for all days in the calendar month.
- The Contract Price is derived by dividing the sum of the weighting factors by the monthly Project Power Output.

$$\frac{\sum_1^d \{ [HLHd * (HLHPd - \$1.00) + LLHd * (LLHPd - \$1.00)] / HOURSd \} * GENERATIONd}{\sum_1^d GENERATIONd}$$

Where:

d = the days in the month

HLHd = number of heavy load hours in the day

HLHPd = daily heavy load hour Mid-C firm energy price

LLHd = number of light load hours in the day

LLHPd = daily light load hour Mid-C firm energy price

HOURSd = HLHn + LLHn

GENERATIONd = the day's Project Power Output

3	Operating Results / Projected Operating Budgets							
67	Notes:							
68	Note 1 - The actual operating results for operating years (OY) 2006, 2007, and 2008 along with the projected operating budget numbers							
69	for the resource for OY 2009 were provided by Energy Northwest, the managing entity and operator of the wind project. Phase 3 of Nine							
70	Canyon became operational in May 2007. The budget comparisons between years have <u>not</u> been "normalized" for the increased							
71	generation, thus they are not comparable. Variable budget costs were increased by 2.06% over FY 2009 amounts based on the projected							
72	rate of inflation continued in Global Insight's forecast, costs were increased by 2.06% over FY 2009 amounts based on the projected rate of							
73	inflation, based on Global Insight's "The U.S. Economy: The 30-Year Focus, August 2008, Base Case Scenario."							
75	Note 2 - Starting in FY 2009, parties interconnected through BPA transmission have to self provide or purchase wind integration service							
76	and within-hour balancing reserves for wind resources through their BPA transmission interconnection agreement. This cost was added							
77	to the operating cost budget by BPA to arrive at a reasonable operating cost for this resource in the resource stack. The charges are							
78	based on BPA's 2009 Wind Integration Rate Case Revised Proposal, Attachment 1 to Settlement Agreement ACS-09, page 1, where							
79	the rate is \$0.68 per kilowatt per month with the rate based on the installed capacity of the wind plant. Mathematically this is expressed:							
80	Installed capacity = 95.9MW * 1,000 = 95,900KW/Mo. * \$0.68 = \$65,212 per month, times 12 months = \$782,544 for OY 2009.							
81	For the FY 2010 Initial Rate Proposal, the assumption was made that the billing determinant for these charges would be:							
82	Wind Integration Rate on Installed Wind Capacity (\$2.70/kW/month) = 95,900KW/Mo. * \$2.70 * 12 months = \$3,107,160							
84	Note 3 - Analysis of the dedicated and non-dedicated portions of the Nine Canyon resource is presented below:							
85								
86	Energy Northwest 95.9 MW Nine Canyon Wind Power Project Allocations - Phases 1, 2, and 3							
87							Resource

101	Mason County PUD No. 3	1.00	1.00	1.01	3.01	3.14%	Yes	
103	Totals	48.10	15.60	32.20	95.90	100.00%		
105	Non-Dedicated Portion					48.00%		
107	Note 3 - Sub-Notes:							
108	Note A - Gloria Bender from Benton PUD informed BPA that all of its wind purchases will be used to meet their Tier 2							
109	loads during FY2012-2029.							
111	Note B - Resource is part of the utilities resource mix, it is not treated as a firm resource, they have not							
112	entered into specific sales contracts for the sale of specific wind energy from this resource at this time.							
113	Utility is not sure how this resource will be used during the rate test period.							
115	Note C - Confirmed that the resource was not formally dedicated to this utility's native load through their BPA Account Executive.							
116								
117	Note 4 - BPA has not included in the resource stack for the WP-10 Power Rate Case any of the portions of this resource that have been							
118	purchased by BPA's 7(b)(2) Customers. BPA assumes that 7(b)(2) Customers purchasing this project are using the project as an							
119	"unspecified" resource that has been declared as serving a utility's native load pursuant to section 5(b) of the Northwest Power Act,							
120	which decreases BPA's load obligations. BPA and Consumer Owned Utilities must comply with the Bonneville Project Act,							
121	Public Law 75-329; the Pacific Northwest Consumer Power Preference Act, Public Law 88-552; and the Northwest Power Act, Public							
122	Law 96-501; before selling power outside the region. None of the customers who own shares of the Nine Canyon Wind resource have							
123	had a portion of their BPA power purchases "decremented" based upon sales of power from this resource outside the region as							
124	provided in the foregoing statutory provisions and BPA's Section 5(b)(9)(c) Policy.

40										
41	9.	Projected Project Cost per MWh (line 5 divided by line 8)			\$22.46					
42										
43	Note B - It is necessary to make an operating adjustment so that the average total operating costs for all years of the rate test period (FY2010-2015) is equivalent to the total actual operating costs in									
44	nominal dollars (line 2) since the RAM model starts with a beginning cost of when the resource is selected from the resource stack and then escalates the cost using the fixed escalation factors at line 1									
45	above. If a simple average of the nominal operating costs for the rate test period were used, the "starting operating cost" of the resource would have been higher at a rate of \$75,714,629 in comparison									
46	to the adjusted operating cost amount of \$71,937,787.

1	BPA's 2010 Wholesale Power Rate Case Section 7(b)(2) Resource Stack - Operating Cost Projections								
2									
3									
4									
5	<p>Note A - BPA has not included in the resource stack for the WP-10 Power Rate Case any of the portions of Grant Co. PUD's Wanapum and Priest Rapids hydro resources that have been purchased by BPA's 7(b)(2) Customers nor the annual portions that Grant sells in its' annual auction to establish a market price for these. During BPA's process of making its' Section 5(b)(9)(c) Policy Determination, concerning the portion of Grant's resources that were sold at auction and for those portions of its resources sold to regional customers that were exchanged back to Grant to be sold at market prices, Grant Co. PUD was charged with ensuring that these resources were not sold, resold, distributed for use or used outside the Pacific Northwest region except in conformance with the Bonneville Project Act, Public Law 75-329; the Pacific Northwest Consumer Power Preference Act, Public Law 88-552; and the Northwest Power Act, Public Law 96-501; before selling power from these resources outside the region. A compliance protocol was established making Grant Co. PUD responsible for the in-region use of the power when the sale at auction is made to an entity that does not have a Northwest Power Act section 5(b) contract with BPA or that does not directly serve regional consumer loads (see the copy of BPA's 5(b)(9)(c) compliance protocol letter to Grant Co. PUD and Grant Co. PUD's prototype market auction contract provisions). Grant is required to monitor the sales of it's purchaser and if requested by BPA, Grant will provide this information to BPA within 15 days of the end of the month requested. In the event that the information does not corroborate that the power was used in the region, BPA may impose a decrement upon Grant during the remaining period of time of its Subscription contract ending September 30, 2011. Similar provisions to Grant's sale at auction have also been incorporated in the contracts with the Snake River Power Association 7(b)(2) Customers.</p>

10									
11									
12									
13									
14									
15									
16									
17									
18	<p>Neither Grant Co. PUD nor BPA's other 7(b)(2) Customers who own shares of the Priest Rapids or Wanapum Hydro resources have had a portion of their BPA power purchases "decremented" based upon sales of power from these resources outside the region as provided in the foregoing statutory provisions and BPA's Section 5(b)(9)(c) Policy. To ensure consistency with BPA's Section 5(b)(9)(c) Policy Determinations, BPA has decided to change its 7(b)(2) resource stack policy to one of presuming that power from these resources and other 7(b)(2) customer resources that have been designated as "unspecified resources" serving a utility's native load pursuant to section 5(b) of the Northwest Power Act, (which decreases BPA's load obligations) are presumed used to meet regional loads unless there is documentation that the power is being exported out of the region only after it was offered within the region in conformance with section 9(c). Based on this 7(b)(2) resource stack policy decision, it was decided to not include any portions of the Grant Co. PUD's hydro resources in the 7(b)(2) rate stack in performing the 7(b)(2) Rate Test.</p>

175		Projections of Priest Rapids Hydroelectric Project Annual Operating Costs							
176		BPA's 2010 Wholesale Power Rate Case							
177		Section 7(b)(2) Resource Stack - Operating Cost Projections							
178		Notes:							
179		1. The financial information for the years 2002 -2007 was from Grant County PUD No. 2's audited financial statements (FS), primarily the audited financial							
180		statements on the individual developments (enterprise funds), and the Schedules of Power Costs and Allocation to Power Purchasers.							
181									
182		2. The operating cost projections for the years 2009-2012 were based on the 2009 Priest Rapids Project Final Proforma budget information dated December 1, 2008.							
183		The projected Net Power Costs Chargeable to Power Purchasers for the Wanapum Development for FY2009-2012 agrees to page 20 of the Proforma report.							
184		Variable operating expenses were trended and adjusted to agree with the Proforma budget information. The debt service information was taken from page 83 of the							
185		2007 FS notes in addition to the information presented on pages 20 and 21 of the Priest Rapids Project Final Proforma budget information dated December 1, 2008.							
186		The amounts paid under the Yakima Nation and Habitat settlements that are outlined in Note 7 - Commitments on pages 85-86 of the 2007 FS.							
187		Depreciation expense was based on a composite depreciation rate of 1.59% (average of 2006 and 2007 rates) per Note 1 - Organization and Accounting policies							
188		of the 2007 FS on page 115. Depreciation expense was calculated on the average of the beginning and ending projected balances of gross utility plant. Capitalized							
189		interest expense relating to the average of the beginning and ending year balances for projected construction work in progress (CWIP) was computed using an interest							
190		rate of 4.93% which is the 3-year (2005-2007) average of capitalized interest expense divided by the average of the beginning and ending projected CWIP balances							
191		for the year, see Note 3 below.							
192									
193		3. <u>Debt Service Information</u>							
194		The actual interest (a) and principal (b) on the Priest Rapids Bonds for the years 2002-2007 was taken from the Operating Statement and the Statement of Cash							
195		Flows. The projected interest (a) and projected principal (b) for 2008-2015 on the Wanapum Revenue Bonds was obtained from Note 5 of the 2007 financial							
196		statements at page 128, Schedule of Debt Service Requirements. A portion of the information for 2009-2012 was from the 2009 Priest Rapids Project Final							
197		Proforma budget information dated December 1, 2008, page 20 the Net Power Costs Charged to Power Purchasers.							
198

215		15% of Debt Service Requirements		1,874,407	1,931,817	2,278,065	2,101,778	3,102,762	
216									
217		4. The Priest Rapids Power Sales Contracts (covering the Priest Rapids and Wanapum Developments) provide that each power purchaser will be obligated to make							
218		payments equal to annual power costs, which include all operating expenses and debt service on the Parity Bonds and debt service coverage (currently 15% of							
219		annual debt service) less any interest earnings, for the life of the new contracts, multiplied by the percentage of output or revenue, as applicable, that the purchaser							
220		is entitled to that year. The above debt service provisions take the place of recovering depreciation expense from power purchasers and thus depreciation is							
221		subtracted from the schedule of power costs charged purchasers. Extraordinary maintenance, and other charges are paid by the Reserve and Replacement Fund,							
222		Supplemental Repair and Renewal Fund, and the Construction Fund and are not recovered from power purchasers.							
223

42										
43	9.	Projected Project Cost per MWh (line 5 divided by line 8)			\$28.64					
44										
45	Note B - It is necessary to make an operating adjustment so that the average total operating costs for all years of the rate test period (FY2010-2015) is equivalent to the total actual operating costs in nominal									
46	dollars (line 2) since the RAM model starts with a beginning cost of when the resource is selected from the resource stack and then escalates the cost using the fixed escalation factors at line 1 above. If a									
47	simple average of the nominal operating costs for the rate test period were used, the "starting operating cost" of the resource would have been higher at a rate of \$96,242,259 in comparison to the adjusted									
48	operating cost amount of \$91,441,702.									
49	Page 1 of 10

	A	B	C	D	E	F	G	H	I
1	Projections of Wanapum Hydroelectric Project Annual Operating Costs								
2	BPA's 2010 Wholesale Power Rate Case								
3	Section 7(b)(2) Resource Stack - Operating Cost Projections								
4									
5	Note A - BPA has not included in the resource stack for the WP-10 Power Rate Case any of the portions of Grant Co. PUD's Wanapum and Priest Rapids hydro resources								
6	that have been purchased by BPA's 7(b)(2) Customers nor the annual portions that Grant sells in its' annual auction to establish a market price for these. During BPA's								
7	process of making its' Section 5(b)/9(c) Policy Determination, concerning the portion of Grant's resources that were sold at auction and for those portions of its resources								
8	sold to regional customers that were exchanged back to Grant to be sold at market prices, Grant Co. PUD was charged with ensuring that these resources were not sold,								
9	resold, distributed for use or used outside the Pacific Northwest region except in conformance with the Bonneville Project Act, Public Law 75-329; the Pacific Northwest								
10	Consumer Power Preference Act, Public Law 88-552; and the Northwest Power Act, Public Law 96-501; before selling power from these resources outside the region.								
11	A compliance protocol was established making Grant Co. PUD responsible for the in-region use of the power when the sale at auction is made to an entity that does not								
12	have a Northwest Power Act section 5(b) contract with BPA or that does not directly serve regional consumer loads (see the copy of BPA's 5(b)/9(c) compliance protocol								
13	letter to Grant Co. PUD and Grant Co. PUD's prototype market auction contract provisions). Grant is required to monitor the sales of it's' purchaser and if requested by								
14	BPA, Grant will provide this information to BPA within 15 days of the end of the month requested. In the event that the information does not corroborate that the power								
15	was used in the region, BPA may impose a decrement upon Grant during the remaining period of time of its Subscription contract ending September 30, 2011. Similar								
16	provisions to Grant's sale at auction have also been incorporated in the contracts with the Snake River Power Association 7(b)(2) Customers.								
17									
18	Neither Grant Co. PUD nor BPA's other 7(b)(2) Customers who own shares of the Priest Rapids or Wanapum Hydro resources have had a portion of their BPA power								
19	purchases "decremented" based upon sales of power from these resources outside the region as provided in the foregoing statutory provisions and BPA's Section 5(b)/9(c)								
20	Policy. To ensure consistency with BPA's Section 5(b)/9(c) Policy Determinations, BPA has decided to change its 7(b)(2) resource stack policy to one of presuming that								
21	power from these resources and other 7(b)(2) customer resources that have been designated as "unspecified resources" serving a utility's native load pursuant to section								
22	5(b) of the Northwest Power Act, (which decreases BPA's load obligations) are presumed used to meet regional loads unless there is documentation that the power is being								
23	exported out of the region only after it was offered within the region in conformance with section 9(c). Based on this 7(b)(2) resource stack policy decision, it was								
24	decided to not include any portions of the Grant Co. PUD's hydro resources in the 7(b)(2) rate stack in performing the 7(b)(2) Rate Test.

	A	B	C	D	E	F	G	H	I
178	Projections of Wanapum Hydroelectric Project Annual Operating Costs								
179	BPA's 2010 Wholesale Power Rate Case								
180	Section 7(b)(2) Resource Stack - Operating Cost Projections								
181									
182	Notes:								
183	1. The financial information for the years 2002 -2007 was from Grant County PUD No. 2's audited financial statements (FS), primarily the audited financial								
184	statements on the individual developments (enterprise funds), and the Schedules of Power Costs and Allocation to Power Purchasers.								
185									
186	2. The operating cost projections for the years 2009-2012 were based on the 2009 Priest Rapids Project Final Proforma budget information dated December 1, 2008.								
187	The projected Net Power Costs Chargeable to Power Purchasers for the Wanapum Development for FY2009-2012 agrees to page 22 of 31 of the Proforma report.								
188	Variable operating expenses were trended and adjusted to agree with the Proforma budget information. The debt service information was taken from page 128 of the								
189	2007 FS notes in addition to the information presented on pages 22 and 23 of the Priest Rapids Project Final Proforma budget information dated December 1, 2008.								
190	The amounts paid under the Yakima Nation and Habitat settlements that are outlined in Note 7 - Commitments on pages 130-131 of the 2007 FS.								
191	Depreciation expense was based on a composite depreciation rate of 1.59% (average of 2006 and 2007 rates) per Note 1 - Organization and Accounting policies								
192	of the 2007 FS on page 115. Depreciation expense was calculated on the average of the beginning and ending projected balances of gross utility plant. Capitalized								
193	interest expense relating to the average of the beginning and ending year balances for projected construction work in progress (CWIP) was computed using an interest								
194	rate of 4.93% which is the 3-year (2005-2007) average of capitalized interest expense divided by the average of the beginning and ending projected CWIP balances								
195	for the year, see Note 3 below.								
196									
197	3. Debt Service Information								
198	The actual interest (a) and principal (b) on the Priest Rapids Bonds for the years 2002-2007 was taken from the Operating Statement and the Statement of Cash								
199	Flows. The projected interest (a) and projected principal (b) for 2008-2015 on the Wanapum Revenue Bonds was obtained from Note 5 of the 2007 financial								
200	statements at page 128, Schedule of Debt Service Requirements. A portion of the information for 2009-2012 was from the 2009 Priest Rapids Project Final								
201	Proforma budget information dated December 1, 2008, page 22 the Net Power Costs Charged to Power Purchasers.

221									
222	4. The Priest Rapids Power Sales Contracts (covering the Priest Rapids and Wanapum Developments) provide that each power purchaser will be obligated to make								
223	payments equal to annual power costs, which include all operating expenses and debt service on the Parity Bonds and debt service coverage (currently 15% of								
224	annual debt service) less any interest earnings, for the life of the new contracts, multiplied by the percentage of output or revenue, as applicable, that the purchaser								
225	is entitled to that year. The above debt service provisions take the place of recovering depreciation expense from power purchasers and thus depreciation is								
226	subtracted from the schedule of power costs charged purchasers. Extraordinary maintenance, and other charges are paid by the Reserve and Replacement Fund,								
227	Supplemental Repair and Renewal Fund, and the Construction Fund and are not recovered from power purchasers.

**CONTRACT
FOR
OPEN-MARKET SALE OF PRIEST RAPIDS PROJECT POWER**

Executed by
**PUBLIC UTILITY DISTRICT NO. 2
OF GRANT COUNTY, WASHINGTON**
And

This contract is entered into as of _____, 2008 between Public Utility District No. 2 of Grant County, Washington (the "District"), a municipal corporation of the State of Washington, and _____ (the "Purchaser"), a _____ corporation organized and existing under the laws of _____. The District and the Purchaser are referred to as a "Party" and collectively as "Parties."

SECTION 1. TERM OF CONTRACT

Except as otherwise provided herein, this Contract shall be in full force and effect from and after it has been executed by the District and the Purchaser. Unless sooner terminated pursuant to other provisions, this Contract shall remain in effect until the end of HE 2400 (midnight) Pacific Prevailing Time "PPT", December 31, 2009. Except as otherwise provided herein, all obligations accruing under this Contract are preserved until satisfied.

SECTION 2. DEFINITIONS

As used in this Contract, the following terms when initially capitalized shall have the following meanings:

"Agreement for the Hourly Coordination of Projects on the Mid-Columbia River" (MCHC) shall mean the 1997 Agreement, as amended from time to time, with the Mid-Columbia PUD project owners, purchasers, the U.S. Department of Energy via the Bonneville Power Administration, the U.S. Department of the Army via the Army Corps of Engineers, and the U.S. Department of Interior via the Bureau of Reclamation to coordinate real time operation of the seven projects from Grand Coulee through Priest Rapids on the Columbia River.

"Bond Resolution" shall mean each and all of the resolutions adopted by the District authorizing the issuance of outstanding Debt for the Priest Rapids Project.

"Business Days" shall mean any weekday, Monday through Friday, excluding District Recognized Holidays as designated on Exhibit B of this Contract.

"Contract" shall mean this **CONTRACT FOR OPEN-MARKET SALE OF PRIEST RAPIDS PROJECT POWER**, in its' entirety.

Final

“Defaulting Party” shall mean the Party who is responsible for an “Event of Default” as defined in Section 15.

“Electric System” shall mean the separate electric utility system of the District, including all associated generation, transmission and distribution facilities and any betterments, renewals, replacements and additions of such system, but does not include the Priest Rapids Project or any other utility properties designated as a separate utility system of the District.

“FERC” shall mean the Federal Energy Regulatory Commission or its successor.

“FERC License” shall mean the license for the Priest Rapids Project PL 2114 issued by FERC on April 17, 2008, effective April 1, 2008.

“Guarantor” means the entity providing a guarantee pursuant to a Guarantee Agreement.

“HE” shall mean hour ending.

“Operating Agreements” shall mean any agreements to which the District is or may become a party, which provide for operation of the Priest Rapids Project, including but not limited to, the Pacific Northwest Coordination Agreement, the Agreement for the Hourly Coordination of Projects on the Mid-Columbia River, the Western Systems Coordinating Council Agreement, and the Northwest Power Pool Agreement, as such agreements currently exist or hereafter may be amended.

“Original FERC License” shall mean the Federal Power Commission License for the Priest Rapids Project issued to the District on November 4, 1955, together with amendments thereto.

“Pacific Northwest” shall have the meaning ascribed thereto in Section 3(14) of the Regional Act.

“Pacific Northwest Coordination Agreement” or “PNCA” shall mean the Agreement amongst northwest parties executed in 1997 for the coordinated operation of the Columbia River System which became effective August 1, 2003, as such Agreement may be amended from time to time.

“Pre-Schedule Day” shall mean days identified by the District pursuant to the Western Electricity Coordinating Council Interchange Scheduling and Accounting Subcommittee daily scheduling calendar.

“Priest Rapids Development” shall mean the separate utility system of the District, including a dam at the Priest Rapids Development, all generation and transmission facilities associated therewith, and all betterments, renewals, replacements, and additions to such system, as further described in Section 2(f) of Exhibit 1 of District Resolution No. 390 which is attached as Exhibit A, but shall not include any additional generation, transmission and distribution facilities hereafter constructed or acquired by the District as a part of the Electric System or the Wanapum Development or any other utility properties of the District acquired or constructed as a separate utility system.

Final

“Priest Rapids Project Output” or “PRPO” shall mean: i.) the amount of capacity, energy (both firm and non-firm), pondage, reactive power, ancillary services and any other product produced by the Priest Rapids Development between the start of HE 0100 P.P.T. January 1, 2009 and the end of HE 2400 (midnight) P.P.T. December 31, 2009, after correction for encroachment, Canadian entitlement, station and project use, and depletions required by the FERC License or other regulatory requirements, together with ii.) the amount of capacity, energy (both firm and non-firm), pondage, reactive power, ancillary services and any other product produced by the Wanapum Development between the start of HE 0100 P.P.T November 1, 2009 and the end of HE 2400 (midnight) P.P.T. December 31, 2009, after correction for encroachment, Canadian entitlement, station and project use, and depletions required by the FERC License or other regulatory requirements

“Priest Rapids Project” shall mean the hydroelectric project on the Columbia River in the State of Washington designated by the Federal Power Commission as Project No. 2114. The Priest Rapids Project consists of the Priest Rapids Development and the Wanapum Development.

“Prudent Utility Practice” means those practices, methods and acts which: (i) when engaged in are commonly used in prudent engineering and operations to operate electric equipment and associated mechanical and civil facilities lawfully and with safety, reliability, efficiency and expedition or (ii) in the exercise of reasonable judgment considering the facts known when engaged in, could have been reasonably expected to achieve the desired result consistent with applicable law, safety, reliability, efficiency and expedition. Prudent Utility Practice is not intended to be the optimum practice, method or act, to the exclusion of all others, but rather to be a spectrum of commonly used practices, methods or acts.

“Regional Act” shall mean Public Law 96-501, the Pacific Northwest Electric Power Planning and Conservation Act.

“Uncontrollable Forces” shall mean any cause reasonably beyond the control of the Party and which the Party subject thereto has made reasonable efforts to avoid, remove or mitigate, including but not limited to acts of God, fire, flood, explosion, strike, sabotage, acts of terrorism, act of the public enemy, civil or military authority, including court orders, injunctions, and orders of government agencies (other than those of the District) with proper jurisdiction, insurrection or riot, an act of the elements, failure of equipment or contractors, or inability to obtain or ship materials or equipment because of the affect of similar causes on suppliers or carriers; provided, however, that in no event shall an Uncontrollable Force excuse the Purchaser from the obligation to pay any amount when due and owing under this contract.

"Wanapum Development" shall mean the second stage of the Priest Rapids Project as more fully described in Section 2.2 of District Resolution No. 474, which is attached as Exhibit A, but shall not include any generation, transmission and distribution facilities hereafter constructed or acquired by the District as a part of the Electric System or the Priest Rapids Development, or any other utility properties of the District acquired or constructed as a separate utility system.

The following terms are defined in the cited sections of this Contract:

“Event of Default” at Section 15(a)

“Party” and “Parties” at the Preamble
“Purchaser Allocation of Pondage” at Section 6(d)(4)
“Purchaser’s PRPO” at Section 3(a)

SECTION 3. PURCHASE AND SALE OF PRIEST RAPIDS PROJECT OUTPUT/REGULATORY APPROVAL

- (a) Purchaser’s PRPO. The District shall make available to the Purchaser and the Purchaser shall purchase an amount of PRPO equal to the total applicable PRPO multiplied by the corresponding Purchaser’s PRPO Percentage which amount is herein referred to as “Purchaser’s PRPO.”
- (b) The Purchaser’s PRPO Percentage shall be _____ % of Priest Rapids Development power for the period starting at (midnight) HE 2400, December 31, 2008 and ending at HE 2400, October 31, 2009 AND _____ % of Priest Rapids Project power for the period starting at HE 2400, October 31, 2009 and ending at (midnight) HE 2400, December 31, 2009.

SECTION 4. PRPO AVAILABILITY

- (a) Purchaser understands and acknowledges that PRPO availability will fluctuate and is subject to and contingent upon many factors including, but not limited to, the following: weather and precipitation levels, regulatory and environmental considerations and requirements, Operating Agreements and Uncontrollable Forces.
- (b) The District may restrict deliveries of PRPO if it determines that such action is necessary to avoid exceeding the capability of the Priest Rapids Project or subjecting it or its operation to undue hazard or violating the FERC License, any applicable law, regulation, or Operating Agreement. Any such restrictions in delivery by the District shall be made pro-rata with all purchasers of PRPO and with the District’s share of PRPO.
- (c) The District may also restrict deliveries of PRPO in case of emergencies or in order to install equipment in, make repairs to, make betterments, renewals, replacements, and additions to, investigations and inspections of, or perform other maintenance work on the Priest Rapids Project. Any such restrictions in delivery shall be made pro-rata with all purchasers of PRPO and with the District’s share of PRPO.
- (d) The District will use commercially reasonable efforts to give advance notice to the Purchaser regarding any planned limit, restriction, interruption or reduction of PRPO, giving the reason therefore and stating the probable duration thereof, and shall provide timely updates concerning the same should conditions change.
- (e) Notwithstanding any other provision of this Contract, the District shall at times have the right to operate the Priest Rapids Project in such manner as it deems to be in its best interests so long as the same is consistent with the FERC License, applicable laws and regulations, Prudent Utility Practice and this Contract.

Final

- (f) Notwithstanding any other provision of this Contract, the District shall have the unilateral right to restrict deliveries of PRPO as may be necessary to fulfill any non-power regulatory or other legal requirements and shall have the unilateral right to determine the amounts of spill required at the Priest Rapids Project. Any such restrictions in delivery shall be made pro-rata with all purchasers of PRPO and with the District's share of PRPO.

SECTION 5. PURCHASE PRICE AND PAYMENTS BY PURCHASER

- (a) The purchase price for the Purchaser's PRPO shall be the total dollar amount submitted by Purchaser on its bid form. Purchaser shall make 12 equal monthly payments of 1/12th of the purchase price with the first such payment due January 10, 2009.
- (b) The monthly payments set forth above shall be due and payable by electronic funds transfer to the District's account, designated in writing by the District, on the 10th (tenth) calendar day of each month. If the 10th calendar day of the month is a Saturday, Sunday or a District Recognized Holiday as listed in Exhibit B, the next following Business Day
- (c) If payment in full of any monthly payment amount set forth on a statement or revised statement is not received by the District on or before the close of business on the 10th calendar day of the month, a delayed payment charge of 2% of the unpaid amount due will be made. Any bill which remains unpaid for more than 30 calendar days after the due date shall, in addition to the delayed payment charge, accrue interest at the lesser of 1.5% per month or the maximum rate allowed by law. If the 10th calendar day of the month is a Saturday, Sunday or a District Recognized Holiday as listed in Exhibit B, the next following Business Day shall be the last day on which payment may be received without the addition of the delayed-payment charge. Additionally, if payment due to the District under this Section 5 remains unpaid 3 Business Days after the due date, the District may thereafter suspend delivery of the Purchaser's PRPO until payment in full of all amounts due and owing (including any interest and delay charges) is received by the District.
- (d) The payments required under this Section 5 shall be due and owing notwithstanding the fact that the actual amount of power from the PRPO Percentage made available to the Purchaser is less or more than that which was anticipated by either Party at the time of execution of this Contract. The District makes no warranties of any type as to the PRPO that will actually be produced and available, other than, that the percentage of PRPO made available to the Purchaser will at all times be in accordance with Section 3(c), and Purchaser assumes all risks associated therewith.
- (e) The purchase price submitted by the Purchaser on its bid form is the total price for the Purchaser's PRPO and all rights associated with it. Except as otherwise provided in Sections 6(c) and 18 (c), the Purchaser shall not be obligated to pay any other amounts charged to or payable by the Purchaser as a result of this Contract, including any water fees, license fees, penalties, taxes, operating, administration, maintenance or capital costs, damages or any other costs whatsoever, relating to ownership or operation of the Priest Rapids Project.

Final

SECTION 6. SCHEDULING OF DELIVERIES OF PRIEST RAPIDS PROJECT OUTPUT

- (a) This Section 6 shall apply to the scheduling of the Purchaser's PRPO.
- (b) Scheduling of Purchaser's PRPO shall be as requested by the Purchaser, or its designated scheduling agent, and shall be subject to the limitations set forth in this Contract.
- (c) The Purchaser, or its designated scheduling agent, shall provide the District each Pre-Schedule Day, in conformance with then prevailing scheduling procedures for scheduling Pacific Northwest generating resources, hourly schedules of desired Purchaser's PRPO deliveries for the following day or days. The schedules will be completed in a time frame consistent with standard industry practices in the Pacific Northwest. Such schedule shall be based upon the probable water supply to the Priest Rapids Project (inflows) and the resulting probable output. Schedules shall be in compliance with all applicable reliability and reserves criteria as put forth by the North American Electric Reliability Council, Western Electricity Coordinating Council, and the Northwest Power Pool; as such criteria are revised from time to time. If failure to comply with reliability or reserve criteria results in costs or fees incurred by the District, Purchaser shall reimburse District for all such costs or fees. Revisions in a schedule may be made at any time upon the request of the Purchaser in accordance with Section 6(d)(9). The District will use reasonable efforts to minimize deviations from the schedule and make corrections promptly as practicable on an hourly basis under conditions as nearly equivalent as practicable to those occurring when the deviations occurred. Alternatively, the Purchaser may provide scheduling information via a dynamic electronic signal. If the Purchaser chooses this option, it shall be solely responsible for providing any and all necessary hardware or software modifications necessary for the District to incorporate this signal.
- (d) Purchaser's schedules shall be in accordance with the following:
 - (1) Subject to the provisions of this Contract, the District shall make available to Purchaser, each hour, Purchaser's PRPO.
 - (2) The District shall make all determinations concerning the Priest Rapids Project maximum output and minimum discharge; and the District shall have the unilateral right to determine the maximum allowable amount of change in PRPO during any time period and the maximum number of unit starts and stops allowable during any time period. Purchaser's daily and hourly schedules shall be based on Purchaser's PRPO in accordance with the Priest Rapids Project operational parameters as established by the District from time to time.
 - (3) Purchaser's schedule shall not be less than Purchaser's PRPO Percentage of the minimum operating capability of the Priest Rapids Project, as determined by the District, nor shall it be greater than Purchaser's PRPO Percentage of the maximum operating capability of the Priest Rapids Project as determined by the District.

Final

- (4) Purchaser shall be entitled to utilize a share of the pondage available at the Priest Rapids Project (the "Purchaser Allocation of Pondage"), determined by multiplying the total of the pondage available by the applicable Purchaser's PRPO Percentage. The pondage available at the Priest Rapids Project shall be determined by the District from time to time on the basis of the volume of water that can be stored between the then current maximum forebay elevation and the then current minimum forebay elevation.
- (5) The District will establish and maintain for Purchaser a pondage account that will reflect the use of pondage by the Purchaser. On the last hour of the term of this Contract, the Purchaser shall return the pond account balance to at least where it was on the first hour of the term of this Contract. The Purchaser may schedule more than its share of the Priest Rapids Project inflows determined in accordance with Section 6(c) if the Purchaser has sufficient amount of energy in its pond account. The amount of the energy scheduled from the pondage account shall not exceed the Purchaser Allocation of Pondage determined in accordance with Section 6(d)(4).
- (6) During any hour that spill is occurring at non-federal Mid-C Projects in order to control forebay elevation, the spill is allocated in the following manner: i) if spill is due to unloaded turbines at the spilling project, that spill will be allocated to any Mid-C participant whose generation was less than their capacity during the spill hour, ii) Spill past loaded units are allocated to each Mid-C party who has a share in the spilling project.
- (7) During any hour that spill is occurring at the Priest Rapids Project for fish or any other non-power purpose determined necessary or desirable by the District, the spill shall be allocated to reduce the inflow of Purchaser and other PRPO purchasers in proportion to their percentage shares of PRPO, including the District.
- (8) If the Purchaser chooses not to provide scheduling information via a dynamic electronic signal, the District will provide the following maximum number of schedules or paths available to schedule Purchaser's PRPO on an hourly basis according to the following formula: the amount of daily capacity available to the Purchaser, divided by 15 (rounded up), plus 1.
- (9) In the absence of dynamic scheduling pursuant to Section 6 (c) real-time schedules shall be called in at least 30 minutes prior to the start of each hour.

SECTION 7. POINT OF DELIVERY

- (a) PRPO power supplied hereunder shall be approximately 230 kV, three-phase, alternating current, at approximately 60 hertz.
- (b) The PRPO power to be delivered hereunder shall be made available to the Purchaser, at its option, exercisable from time to time, at any one or more of the following points:
 - (1) The 230 kV bus of the Bonneville Power Administration's Midway Substation;

Final

- (2) The 230 kV bus of the switchyard of the Wanapum Development;
- (3) The 230 kV bus of the Vantage Substation; or
- (4) At any other location mutually agreed to by the District and Purchaser.

SECTION 8. METERING AND TRANSMISSION LOSSES

- (a) The District shall provide and maintain suitable meters in the generator leads of the Priest Rapids Project to indicate and record the PRPO. The actual PRPO shall be determined from totaled readings from the meters. The District or an agent of the District shall read meters and records thereof shall be made available to the Purchaser as may be reasonably requested.
- (b) Purchaser shall be required to schedule an amount of energy equal to the actual losses resulting from transformation and transmission to the District.

SECTION 9. INFORMATION TO BE MADE AVAILABLE TO THE PURCHASER

- (a) The Purchaser, upon at least 30 days advance written notice to the District, shall have the right at its sole cost and expense to audit or examine operating records relating to the Priest Rapids Project during the District's normal business hours. All costs incurred by the District associated with such audit, including, but not limited to, District labor, materials and reproduction services shall be promptly reimbursed to the District by the Purchaser.
- (b) The Purchaser's representatives shall at all times be given reasonable access to the Priest Rapids Project, subject to the District's applicable safety rules and regulations.
- (c) The District shall exercise commercially reasonable efforts to provide to the Purchaser estimates and information reasonably necessary for the Purchaser to exercise its rights under this Contract.

SECTION 10. LIABILITY OF PARTIES

- (a) Except as otherwise provided in this Contract, each Party hereby releases the other Party and its commissioners, officers, directors, agents and employees from any claim for loss or damage arising out of the ownership, operation, and maintenance of the Priest Rapids Project including any loss of profits or revenues, loss of use of power system, cost of capital, cost of purchased or replacement power, other substantially similar liability or other direct or indirect consequential loss or damage.
- (b) The Purchaser shall have no claim of any type or right of action against the District: (i) as a result of a FERC or court order or amendment; (ii) as a result of adjustment of PRPO, and the Purchaser hereby releases the District and its commissioners, officers, agents and employees from any claim for loss or damage arising out of the events described in this paragraph.

Final

- (c) The Purchaser is purchasing output from or attributable to the Priest Rapids Project as available and scheduled by the Purchaser. The Purchaser acquires no interest in or rights to any facilities forming part of the Priest Rapids Project.

SECTION 11. NOTICES AND COMPUTATION OF TIME

- (a) Any notice, demand or request provided for in this Contract shall be, unless otherwise specified herein, in writing and may be delivered by hand delivery, United States mail, overnight courier or facsimile. Notice by courier, facsimile or hand delivery shall be effective at the close of business on the day actually received, if received during business hours on a regular Business Day of the District, and otherwise shall be effective on the close of business on the next regular Business Day of the District. All notices by United States mail shall be sent certified, return receipt requested and shall be effective on the date of actual receipt by the recipient.

All notice, demand or request made by mail shall be mailed postage prepaid and addressed to:

Manager
Public Utility District No. 2 of Grant County
P.O. Box 878
30 C St S.W.
Ephrata, Washington 98823;

any notice or demand by the District to the Purchaser under this Contract shall be deemed properly given if a written copy is delivered to the Purchaser's representative specified herein by courier and the Purchaser's signature evidencing receipt thereof is obtained or if mailed postage prepaid and addressed to:

- (b) In computing any period of time from such notice, such period shall commence at HE 2400 (midnight) PPT on the date mailed. The designations of the name and address to which any such notice or demand is directed may be changed at any time by either Party giving notice as provided above.

SECTION 12. DISTRICT'S BOND RESOLUTIONS AND LICENSE

It is recognized by the Parties that the District, in its operation of the Priest Rapids Project, must comply with the requirements of the Bond Resolution and with the FERC License together with amendments thereof from time to time made, and the District is hereby authorized to take such actions as the District determines are necessary and appropriate to comply with such Bond Resolutions and FERC License.

SECTION 13. GOVERNING LAW.

The Parties agree that the laws of the State of Washington shall govern this Contract.

SECTION 14. ASSIGNMENT OF CONTRACT

Neither the Purchaser nor the District shall by contract, operation of law or otherwise, assign this Contract or any right or interest in this Contract without the prior written consent of the other Party, which shall not be unreasonably withheld; provided, however, a Party may, without the consent of the other Party (and without relieving itself from liability hereunder) (i) transfer or assign this Contract to an affiliate of the Party provided that the affiliate's creditworthiness is equal or higher than that of the Party or (ii) transfer or assign this Contract to any person or entity succeeding to all or substantially all of the distribution and generating facilities of the Party whose creditworthiness is equal or higher than that of the Party; provided however, that in each such case, any such assignee shall agree in writing to be bound by the terms and conditions in this Contract and the transferring Party shall deliver such tax and enforceability assurance as the other Party may reasonably request.

SECTION 15. REMEDIES ON DEFAULT

(a) An "Event of Default" shall mean with respect to a Party ("Defaulting Party"):

(1) the failure by the Defaulting Party to make, when due, any payment required pursuant to this Contract if such failure is not remedied within three (3) Business Days after written notice of such failure is given to the Defaulting Party by the other Party ("the Non-Defaulting Party"). The Non-Defaulting Party shall provide the notice by facsimile to the designated contact person for the Defaulting Party and also shall send the notice by overnight delivery to such contact person; or

(2) the failure by the District to deliver PRPO to the Purchaser as required by this Contract and such failure is not cured within three (3) Business Days after written notice thereof from the Purchaser to the District; or

(3) the failure by the Defaulting Party to have made accurate representations and warranties as required this Contract and such failure is not cured within three (3) Business Days after written notice thereof to the Defaulting Party; or

(4) the institution, with respect to the Defaulting Party, by the Defaulting Party or by another person or entity of a bankruptcy, reorganization, moratorium, liquidation or similar insolvency proceeding or other relief under any bankruptcy or insolvency law affecting creditor's rights or a petition is presented or instituted for its winding-up or liquidation; or

(5) the failure by the Defaulting Party to provide adequate assurances of its ability to perform all of its outstanding material obligations to the Non-Defaulting Party under this Contract.

(6) With respect to its Guarantor, if any:

Final

- (i) if a material representation or warranty made by a Guarantor in connection with this Contract, or any transaction entered into hereunder, is false or misleading in any material respect when made or when deemed made or repeated; or
 - (ii) the failure of a Guarantor to make any payment required or to perform any other material covenant or obligation in any guarantee made in connection with this Contract, including any transaction entered into hereunder, and such failure shall not be remedied within three (3) Business Days after written notice; or
 - (iii) the institution, with respect to the Guarantor, by the Guarantor or by another person or entity of a bankruptcy, reorganization, moratorium, liquidation or similar insolvency proceeding or other relief under any bankruptcy or insolvency law affecting creditor's rights or a petition is presented or instituted for its winding-up or liquidation; or
 - (iv) the failure, without written consent of the other Party, of a Guarantor's guarantee to be in full force and effect for purposes of this Contract (other than in accordance with its terms) prior to the satisfaction of all obligations of such Party under each transaction to which such guarantee shall relate; or
 - (v) a Guarantor shall repudiate, disaffirm, disclaim, or reject, in whole or in part, or challenge the validity of, any guarantee.
- (b) If an Event of Default occurs, the Non-Defaulting Party shall possess the right to terminate the Contract or seek specific performance. In the event the Non-Defaulting Party elects to terminate the Contract, it may pursue any legal or equitable remedies available at law or otherwise.

SECTION 16. CREDITWORTHINESS

Should the Purchaser's creditworthiness, financial responsibility, or performance viability be unsatisfactory to the District in the District's reasonably exercised discretion with regard to this Contract, the District may require the Purchaser to provide, at the Purchaser's option (but subject to the District's acceptance based upon reasonably exercised discretion), either (1) the posting of a letter of credit, (2) a cash prepayment, (3) the posting of other acceptable collateral or security by the Purchaser, (4) a guaranty agreement executed by a creditworthy entity; or (5) some other mutually agreeable method of satisfying the District.

All collateral posted in the form of cash or cash prepayment will be held in an interest bearing escrow account. In the event the collateral is no longer required to satisfy Purchaser's obligations, it will be returned to the Purchaser, with interest earned, on a tiered basis near the end of the term of this Contract. For each fiscal year beginning April 1 and ending March 31, deposits will earn interest calculated at the rate for the one-year Treasury Constant Maturity calculated by the U.S. Treasury, as published in the Federal Reserves Statistical Release H.15 on March 15 of each year. If March 15 falls on a non-Business Day, the District will use the rate

Final

posted on the next Business Day. The one-year Treasury Constant Maturity rate on March 15 of each year will be applied to the next fiscal year beginning April 1 and ending March 31.

Events which may trigger the District requesting assurance due to reasonable concern about the Purchaser's creditworthiness, financial responsibility, or performance viability include, but are not limited to, the following:

- (a) The Purchaser or its Guarantor has debt which is rated as investment grade and that debt falls below the investment grade rating by at least one rating agency or is below investment grade and the rating of that debt is downgraded further by at least one rating agency.
- (b) Other material adverse changes in the Purchaser's financial condition occur.
- (c) Substantial changes in market prices which materially and adversely impact the Purchaser's ability to perform under this Contract occur.

If the Purchaser fails to provide such reasonably satisfactory assurances of its ability to perform an obligation hereunder within three (3) Business Days of demand therefore, that will be considered an Event of Default under Section 15 of this Contract and the District shall have the right to exercise any of the remedies provided for under that Section 15. Nothing contained in this Section 16 shall affect any credit agreement or arrangement, if any, between the Parties.

SECTION 17. VENUE AND ATTORNEY FEES

Venue of any action filed to enforce or interpret the provisions of this Contract shall be exclusively in the United States District Court for the Eastern District of Washington or the Superior Court of the State of Washington for Grant County and the Parties irrevocably submit to the jurisdiction of any such court. In the event of litigation to enforce the provisions of this Contract, the prevailing Party shall be entitled to reasonable attorney's fees in addition to any other relief allowed.

SECTION 18. COMPLIANCE WITH LAW

- (a) The Parties understand and acknowledge that operation of the Priest Rapids Project must conform to and comply with all applicable laws, rules, regulations, license conditions or restrictions promulgated by the FERC, the State of Washington or any other governmental agency or entity having jurisdiction over the Priest Rapids Project. The Purchaser shall cooperate and take whatever action is necessary to cooperate fully with the District in meeting such requirements. Obligations of the District contained in this Contract are hereby expressly made subordinate and subject to such compliance.
- (b) RCW 54.16.040 contains provisions relating to the District's sale of electric energy. The Parties understand and acknowledge that the District must comply with RCW 54.16.040 to the extent applicable to this Contract and the District's obligations and performance of this Contract are hereby expressly made subordinate and subject to such compliance.

Final

- (c) The Purchaser shall ensure that PRPO available to Purchaser under this Contract is not sold, resold, distributed for use or used outside the Pacific Northwest in violation of the Bonneville Project Act, Public Law 75-329, the Pacific Northwest Consumer Power Preference Act, Public Law 88-552, the Regional Act or in contravention of any applicable state or federal law, order, regulation, or policy. If such sales occur in violation of the foregoing, the Purchaser shall reimburse the District for any penalties imposed on and costs incurred by the District as a consequence of such violation. Attached hereto as Exhibit C is a letter from the Bonneville Power Administration regarding this subject.

SECTION 19. HEADINGS

The headings of sections and paragraphs of this Contract are for convenience of reference only and are not intended to restrict, affect or be of any weight in the interpretation or construction of the provisions of such sections and paragraphs.

SECTION 20. ENTIRE AGREEMENT; MODIFICATION; CONFLICT IN PRECEDENCE

This Contract constitutes the entire agreement between the Parties with respect to the subject matter of this Contract, and supersedes all previous communications between the Parties, either verbal or written, with respect to such subject matter. No modifications of this Contract shall be binding upon the Parties unless such modifications are in writing signed by each Party.

SECTION 21. NO PARTNERSHIP OR THIRD PARTY RIGHTS

- (a) This Contract shall not be interpreted or construed to create an association, joint venture or partnership between the Parties, or to impose any partnership obligations or liability upon any Party.
- (b) This Contract shall not be construed to create rights in or grant remedies to any third party as a beneficiary of this Contract.

SECTION 22. REPRESENTATIONS AND WARRANTIES

Each Party represents and warrants to the other Party that:

- (a) It is duly organized, validly existing and in good standing under the laws of the jurisdiction of its formation.
- (b) The execution, delivery and performance of this Contract are within its powers, have been duly authorized by all necessary action and do not violate any of the terms and conditions in its governing documents, any contracts to which it is a party or any law, rule, regulation, or order applicable to it.
- (c) This Contract constitutes a legally valid and binding obligation enforceable against it in accordance with its terms, subject to equitable defenses and applicable bankruptcy, insolvency and similar laws affecting creditors' rights generally.

SECTION 23. OPTIONAL AGREEMENT AVAILABLE TO PURCHASER

(a) The Purchaser shall have the option of becoming a joinder to the “1997 Agreement for the Hourly Coordination of Projects on the Mid-Columbia River”, pursuant to Section 9(a) of that Agreement.

DEFINITION OF PRIEST RAPIDS PROJECT

RESOLUTION NO. 390 – DEFINITION OF PRIEST RAPIDS DEVELOPMENT

Section 2(f) of Exhibit 1. “Priest Rapids Development” shall mean those properties and facilities consisting of the Priest Rapids dam, site, reservoir, switchyard and power plant, including all generating facilities associated therewith up to and including the first ten (10) main turbine generator units each with a nameplate rating of approximately 78,850 kilowatts and any additional generating facilities which may be installed as provided for in Section 19 of the Original Power Sales Contract, together with the associated transmission facilities consisting of two 230 KV transmission lines and terminal facilities interconnecting the Priest Rapids switchyard and the Bonneville Power Administration’s Midway Substation and an undivided one-half (1/2) interest in the interconnecting facilities between the Priest Rapids switchyard and the Wanapum switchyard.

RESOLUTION NO. 474 - DEFINITION OF WANAPUM DEVELOPMENT

Section 2.2. The District specifies and adopts the plan and system hereinafter set forth for the acquisition, by purchase or condemnation, and construction of the following generation and transmission facilities as a separate utility system of the District constituting the Wanapum Development of the District, to wit:

A. The District shall construct an electric generating plant and associated facilities on the Columbia River at approximately river mile 415 from the mouth of said river at the Wanapum site on said river, in Grant and Kittitas Counties, Washington, as authorized by the Federal Power Commission License for Project No. 2114, originally issued November 4, 1955, and all amendments thereto; said generating plant to have an installed nameplate rating of approximately 831,250 kilowatts, and said generating plant and associated facilities to include, but not limited to, a concrete gravity dam, a fully enclosed reinforced concrete powerhouse containing ten (10) turbo-generating units with provisions in the intake structure for the installation of six (6) additional turbo-generating units, a reservoir, waterways, fish ladders and other fish protective devices; provisions for future installation of navigation locks; transforming facilities; a switchyard; transmission facilities necessary to connect the powerhouse to the existing transmission facilities of the Priest Rapids Development and to the transmission facilities of the Bonneville Power Administration in the vicinity of said Project; railroad siding, shops, warehouses,

In reply refer to: PS-6

Mr. Tim Culbertson, General Manager
Public Utility District No. 2 of Grant County
P.O. Box 878
Ephrata, WA 98823

Dear Mr. Culbertson:

The Bonneville Power Administration (BPA) and Grant County Public Utility District No. 1 (Grant) met on July 26, 2006 to discuss Grant's pending Priest Rapids Development Project market based auction. Grant is preparing for its 2006 Power Auction of the Priest Rapids Project output as a pricing mechanism for the 30 percent Reasonable Portion product sold to Pub. L. 544 parties. The open market auction process is a fairly new mechanism for a utility to make power sales in the region and is Grant's choice for implementing the Federal Energy Regulatory Commission (FERC) order regarding the reasonable portion requirement of Pub. L. 544 in *Kootenai Electric Coop. Inc. et al v. Public Utility District No. 2*, 82 FERC ¶ 61,112, affirmed in *Kootenai Electric Cooperative Inc. v. Federal Energy Regulatory Commission*, 192 F.3d 144 (D.C. Cir. 1999). Grant conducted a prior auction which resulted in a sale of Project power to Constellation Energy, Inc. As we discussed at our July 26th meeting, we both would like to ensure compliance of Grant's auction sales with the application of BPA statutes and policy regarding the sale of customer-owned hydroelectric resources under Section 3(d) of Pub. L. 88-552, the Pacific Northwest Consumer Power Preference Act, and section 9(c) of Pub. L. 96-501, the Pacific Northwest Electric Power Planning and Conservation Act. Therefore, BPA wishes to address its understanding reached after our discussion on July 26th as to treatment of these sales and Grant's 2005 auction sale to Constellation.

BPA's Policy on Determining Net Requirements of the Pacific Northwest Utility Customers under Sections 5(b)(1) and 9(c) of the Northwest Power Act (May 2000) addresses the extra-regional sale of regional resources, including output from hydroelectric resources such as the Priest Rapids Project. It is understood by BPA that, based on the above mentioned FERC order, Grant has no right to the power from the Project that is represented by the 30 percent Reasonable Portion and is required to offer this power to participating parties. We also understand that the power offered is part of the Reasonable Portion and is used to set a price for the entire Reasonable Portion sale. As seller, and in order to comply with both the FERC order and BPA's policy and statutes, you have included in your contracts for the sale of this power a provision which states: "The purchaser shall ensure that Priest Rapids Development Output available to Purchaser under this contract is not sold, resold, distributed for use or used outside the Pacific Northwest in violation of the Bonneville Project Act, Public Law 75-329, the Pacific Northwest

Consumer Power Preference Act, Public Law 88-552, the Regional Act or in contravention of any applicable state or Federal law, order regulation or policy.” While that provision is a good first step, it does not address the practical consideration of reporting resale information by the purchaser and does not in all instances identify what actions BPA may be required to take under its statutes.

To clarify our mutual responsibilities regarding Grant’s auction sales we discussed and agreed upon the following compliance protocol:

1. Grant will continue to include in its open market auction contracts a provision that requires compliance by the purchaser with BPA’s policy and statutes governing the sale of non-Federal power, substantially in the form noted above. In the event of resale in violation of that provision, BPA would have recourse against Grant by reduction of BPA’s firm power sale (decrement) consistent with BPA’s statutes and policy.
2. As the seller, Grant remains responsible for the in-region use of the power when the sale at auction is made to a purchaser that is an entity that does not have a Northwest Power Act section 5(b) contract with BPA, or that does not directly serve retail consumer load in the Region. Grant is responsible for demonstrating the purchaser resold the power to a Northwest load serving investor-owned utility, public or cooperative utility, or direct service industry (DSI) customer with a section 5(b) or 5(d) contract that has a planned load in excess of its planned generation. Customers holding a 5(b) or 5(d) contract, other than those that receive all of their firm power supply from BPA, are assumed to have a planned load in excess of their planned generation.
3. As long as the purchaser’s monthly sales of power to the BPA customers identified in 2 above meets or exceeds the amount of firm power bought at auction and delivered for the month, then BPA will consider the resale as used in the Region. Grant will monitor such sales by the purchaser by keeping monthly records of tags, commercial arrangement documents, or FERC website hourly data files, whichever is appropriate. If requested by BPA, Grant will provide this information to BPA 15 days after the end of a month. In the event that such resale by the purchaser does not equal the amount of power purchased at auction in the month, BPA may impose a decrement on its firm power sales in subsequent months to Grant equal to the difference. Grant may have a contractual recourse against the purchaser.
4. If the sale at auction is to the BPA customers identified in 2 above, then BPA will consider the power sold at auction used for load in the Region.

Constellation Sale

BPA’s statutes and 9(c) policy require BPA to make certain determinations regarding the effect of potential sales of power outside the region of non-Federal power resources, or exports upon its firm power requirements obligations to provide service to its customers. BPA is only allowed to

replace such power exported with Federal power that is otherwise surplus to BPA's firm power obligations. These determinations are factually based and can result in BPA reducing or decrementing its firm power obligations to the seller. In response to BPA's April 27, 2006, letter to Grant, Grant has supplied BPA data files that show certain sales made at the Mid-Columbia Hub by Constellation, the 2005 purchaser of power auctioned by Grant as the 6 percent Priest Rapids Project output. These files demonstrate Constellation has sold the 2005 auction power to several Northwest load serving utilities, or cooperatives that have 5(b) or 5(d) contracts. Further, for the period of this 2005 auction, BPA's regional planning document, the Whitebook, as updated, showed both BPA and the region in a surplus power condition having firm resources that exceed firm loads for that planning year (2005). Therefore, BPA finds that Grant's sale to Constellation and Constellation's resale of power from the 2005 auction complies with BPA's 9(c) policy. BPA finds no need to decrement or reduce Grant's block purchase from BPA and Grant will not be decremented.

Thank you for taking the time to meet with us and establishing the compliance protocol we have both agreed to, as described above. I wish you success on your upcoming auction and appreciate your patience in resolving this issue.

Sincerely,

/s/ Mark Gendron

BPA's 2010 Wholesale Power Rate Case
BPA Programmatic Conservation - Historical Savings and Expenditures
Gross Cost Amounts Before Adjustments

Notes to Worksheet:

1. Dollar costs are in nominal dollars associated with the year of the expenditure.
2. The aMWs of savings acquired and the annual expenditures are gross amounts with no adjustments for degradation of measures over time. The annual savings amounts for the years 1982-2008 were obtained from the 2009 Conservation Resource Energy Data, "The RED Book." The annual savings totals for years 1982-2008 were based on Tables A and B using the sub-sector line amounts. The gross savings amounts attributable to building codes, market transformation efforts, and C&RD are included in the savings totals. See the spread sheet titled "Total BPA Historical Programmatic Conservation - Gross Savings Amounts," pages D-13 through D17.
3. Total Annual Expenditures for the years 1982-2008 are based on Table D of the 2009 version of the "RED Book." Information from Table D as adjusted for federal reimbursable expenditures and receipts received along with an allocation of general and administrative overheads for the years FY2001-2008 are presented on pages D-3, D-4, and D-5. Expenditures for market transformation, Conservation and Renewable Discounts (C&RD), Conservation Rate Credits (CRC), along with other major expenditure categories are separately identified.
4. The annual capitalized amounts are based on the additions to Annual Plant in Service based on the 2010 Requirement Study Documentation WP-10-FS-BPA-10, Volume 1, Chapter 4, Tables 4M, 4N, and 4o. This number is consistent with the information in BPA's annual reports after subtracting amortization of prior year investments.
5. The amount of conservation bonds issued and the term of the bonds is based on the Revenue Requirement Study Documentation WP-10-FS-BPA-10 Volume 1, Chapter 7, Table 7A.
6. BPA has agreed to pay the debt service for Conservation and Renewable Energy System (CARES) a joint operating agency (JOA) of the State of Washington, Emerald Public Utility District, City of Tacoma (Tacoma Power), and Eugene Water and Electric Board. The amounts in the column Third-Party Financed Conservation represent the original issue amount (principle) of bonds to finance conservation projects.
7. Total Capitalized/Debt Financed Conservation is comprised of BPA capitalized expenditures that were financed with U.S. Treasury Bonds and the conservation that is capitalized under Nonfederal Projects in BPA's financial statements which consists of third-party funded conservation as outlined in Note 6 above.

85	Notes:											
86	1. Federal reimbursable expenditures undertaken on behalf of other federal agencies and reimbursements for these costs are not included in the presentation of costs											
87	for years occurring prior to FY 2001. These expenditures and reimbursements would have netted out close to zero for the FY1982-2000 time period so there would not											
88	have been a material difference in the Cumulative Net Expenditures for this period of time.											
89	2. Conservation costs for the years prior to FY 2001 do not include an allocation of general and administrative overhead costs.											
90	3. Annual conservation costs do not include the cost of financing the current year's conservation efforts or the interest expense associated with prior year expenditures											
91	that were capitalized and debt financed.											
92	4. Conservation Modernization (ConMod) expenditures totaling \$48,140,000 that were incurred during FY1988-1999 were omitted from the expenditure totals in this report.											
93	The conservation savings associated with ConMod have been removed from the 7(b)(2) resource stack amounts. The Net Annual Conservation expenditures above of											
94	\$1,792,535,000 for FY1982-2000 plus the ConMod expense of \$48,140,000 agree to the total FY1982-2000 conservation expenditure total of \$1,840,675,000 on Page D-6.

BPA's 2010 Wholesale Power Rate Case
NET Historical Conservation Savings and Expenditures 1982-2008
With Expenditure Adjustments for ConMod and C&RD
Savings Adjustments for C&RD, CRC, Market Transformation and Building Codes

Notes Concerning Expenditure Adjustments:

1. Dollar costs for FY1982-2008 are in nominal dollars associated with the year of expenditure. Costs for FY1982-2008 were obtained from Table D of the 2009 Conservation Resource Energy Data, "The RED Book." Information from Table D as adjusted for federal reimbursable expenditures and receipts received along with an allocation of general and administrative overheads for the years FY2001-2008 are presented on pages D-3, D-4, and D-5. Adjustments to the gross expenditure amounts are presented on pages D-6 and D-7.
2. The 2009 RED Book totals have excluded the savings from ConMod Conservation investments that were placed primarily with the aluminum reduction industry. Since most of these plants are no longer operating and since the amount of load that BPA might serve is not known with a high degree of certainty, the conservation savings from these past investments is not available to reduce loads in the 2010-2015 time period of the 7(b)(2) rate test. The expenditures for ConMod investments were subtracted from the cost of conservation resources in the presentation of net 7(b)(2) conservation costs.
3. The C&RD investments costs were not included in BPA's revenue requirement in determining "base" rate levels for FY2001-2006. They were added after the determination of base rates and were credited back to customers as credits on their power bills in return for agreeing to invest the money in conservation efforts or renewable resources. The controls and documentation surrounding the achievement of this conservation during the FY2001-2006 time period was less than past practices making the savings from these expenditures less assured. Utilities participating in this program who were not "load following" customers did not have their contract purchases decreased for these conservation savings. Consequently, the Administrator's load obligations to these customers was not reduced (no decrementing of contract obligations occurred). For these reasons the savings and expenditures associated with the C&RD program for FY2001-2006 were removed from the totals for these years.
4. No reduction in expenditures for the CRC program for FY 2007-2008 were made. Unlike the FY2001-2006 time period when the C&RD costs were not included in the revenue requirement, the WP-07 revenue requirement included CRC costs. The rates charged all BPA customers included CRC costs. It would be inequitable and not feasible to conduct a CRC program where only load-following customers were eligible to participate. In order to achieve the conservation savings in load following customer service areas, BPA also needed to undertake the CRC Program in non-load following service territories whose customers also paid for CRC program costs. The controls surrounding documentation and verification of CRC savings were also improved compared to the controls and verification procedures that pertained to the C&RD program prior to FY 2007. As outlined in Note 2 to the "BPA 1982-2008 NET Historical Programmatic Conservation - After Adjustments" worksheet (page D-23), approximately 48% of the saving attributable to FY2007-2008 CRC efforts were attributable to non-load following loads that were not decremented for the savings achieved. These non-load following savings were removed from the 7(b)(2) resource stack for FY2007-2008.

Notes Concerning Expenditure Adjustments - Continued:

5. BPA's market transformation efforts have been achieved through the Northwest Energy Efficiency Alliance (NEEA) for the most part during this period of time. NEEA's market transformation efforts cover the entire Pacific Northwest Region and beyond. BPA paid for approximately one-half of NEEA's operating budgets during the 1997-2009 time frame. The expenditures that BPA pays NEEA has only a partial impact on reducing the Administrator's load obligation. BPA's RED Book claims market transformation savings equal to BPA's 50% NEEA funding level. Since BPA's customer's service territories only account for approximately 35% of regional loads, an adjustment was made to reduce savings amounts claimed that occur outside of BPA customer service territories. Market transformation savings were reduced by a second adjustment for BPA's non-load following loads that make up approximately 48% of BPA's loads. The amount of market transformation expenditures were not reduced. The amount that BPA paid NEEA was material to NEEA's region wide efforts and the scale of it's programs. BPA's funding was critical to sustaining market transformation efforts in the region. In order to achieve the 18% of regional savings that are reflected in the 7(b)(2) resource stack savings amounts for FY2007-2009, BPA would have needed to fund the program at approximately the same level of funding. See Note 3 to the "BPA 1982-2008 NET Historical Programmatic Conservation - After Adjustments" worksheet at page D-24 for the load data and calculation of percentages.
6. Adjustments were made to remove the savings attributable to building codes for the years after 2001. It was thought that the benefits from earlier BPA expenditures to achieve Model Energy Code standards had largely been achieved by this time. The savings for the 7(b)(2) resource stack should be conservatively stated with a high degree of assurance that the conservation savings would be able to reduce loads. No direct expenditures by BPA for building code efforts occurred during FY2002-2008, so no expenditure adjustments are necessary.
7. The historical expenditures reflected in the adjusted annual expenditure totals presented at pages D-3, D-4 and D-5 contain direct conservation program costs along with indirect and overhead costs that were necessary to acquire the conservation savings reported for the years FY2001-2008. The expenditure totals do not contain any financing costs associated with conservation efforts. The rates analysis model (RAM) finances that portion of a year's conservation expenditures that were capitalized using a 15-year amortization and financing period. The interest rates used to finance conservation investments in the 7(b)(2) Case are based on the Financing Study results on the interest rates that would apply to a Joint Operating Agency formed to undertake these investments on behalf of the 7(b)(2) Customers that was prepared by BPA's financial advisor for the final studies. The first year expensed costs associated with conservation investments are treated as deferred charges under SFAS No. 71 and are amortized and financed over a five-year period in the WP-10 rate case. The interest rates used to finance the first-year expensed costs were based on Public Financial Management's revised financing study dated June 3, 2009 for the WP-10 final studies.

BPA's 2010 Wholesale Power Rate Case
Projected Conservation GROSS and NET EXPENDITURES - 2009-2015
Net BPA Conservation Program - Section 7 (b)(2) Amounts

Notes - Adjustments Made to BPA's Conservation Program Expenditure Amounts to Arrive at Section 7 (b)(2) Amounts

1. Dollar costs are in the nominal dollars associated with the year of expenditure. The expenditure projections for the years 2009-2011 come from BPA's Conservation Program Proposals that were finalized in the Integrated Program Review (IPR-2) process. The expenditure projections for 2012-2015 were based on the assumption that the conservation program design for 2009-2011 continued during these later four years. BPA's Direct Acquisition capital expenditures established in the IPR-2 process were reduced by a "lapse factor" amount that reflects past historical performance in obligating these expenditures during the budget year and to meet agency wide borrowing targets. The Direct Acquisition Conservation Capital Expenditure amounts established in the IPR-2 process, the lapse factor reduction amounts, and the net amount of these capital expenditures that are contained in the Program Case Revenue Requirement Assumptions are outlined in the table below:

Conservation Direct Acquisition Capital Costs:

<u>Year</u>	<u>IPR-2 Budget Amount</u>	<u>Lapse Factor Reduction</u>	<u>Program Case Amount</u>
2009	20,000	0	20,000
2010	39,000	6,181	32,819
2011	47,000	7,408	39,592
2012	56,000	8,797	47,203
2013	56,000	8,779	47,221
2014	56,000	8,776	47,224
2015	56,000	8,773	47,227

The conservation Direct Acquisition Capital Cost amounts contained in the 7(b)(2) Rate Test resource stack are consistent with the amounts contained in the Program Case Revenue Requirement.

2. Debt service costs are not present in the 7(b)(2) Case Expenditure Table. Annual debt service costs are included in the annual revenue requirements for each year by the Rates Analysis Model for the 7(b)(2) Case using the interest rate projections provided by BPA's Financial Advisor (Appendix A to the 7(b)(2) Study) associated with the hypothetical Joint Operating Agency's financing of conservation resources in performing the Section 7(b)(2) rate test.
3. No reduction in expenditures for the CRC program were made. The rates charged all BPA customers for FYs 2009-2015 included CRC costs. It would be inequitable and not feasible to conduct a CRC program where only load-following customers were eligible to participate. In order to achieve the conservation savings that occur in the service territories of full-requirements customers, BPA also needs to undertake the CRC program for BPA's other customers who pay for CRC costs.

Notes - Adjustments Made to BPA's Conservation Program Expenditure Amounts to Arrive at Section 7 (b)(2) Amounts - continued

4. BPA's market transformation efforts are being achieved through the Northwest Energy Efficiency Alliance (NEEA) during the 2010-2015 period of time. NEEA's market transformation efforts cover the entire Pacific Northwest Region and beyond. BPA is projected to pay for approximately 35% of NEEA's operating budgets during the FY2010-2015 time period. Since BPA's projected funding level for NEEA for FY2010-2015 approximate BPA customer's load service territories' share of regional loads, no adjustment for savings occurring outside of BPA's service territory was necessary for the FY2010-2015 time period. Market transformation savings were reduced for BPA's non-load following loads that make-up approximately 48% of BPA's loads. The amount of market transformation expenditures were not reduced. The amount that BPA is projected to pay NEEA is material to NEEA's region wide efforts and the scale of it's programs. BPA funding is critical to sustaining market transformation efforts in the region. In order to achieve the 18% of regional savings that are reflected in the 7(b)(2) resource stack savings amounts for FY2010-2015, BPA would have needed to fund the program at approximately the same level of funding. See Note 3 to the table, "Net BPA Projected Conservation Program Savings - 2010-2015 - Section 7(b)(2) Amounts" at page D-27.
5. The Net Conservation Savings for FY2009-2015 are outlined in the table titled, "Net BPA Projected Conservation Program Savings - 2009-2015 - Section 7(b)(2) Amounts" at page D-26.

BPA's 2010 Wholesale Power Rate Case
BPA 1982-2008 NET Historical Programmatic Conservation Savings - After Adjustments
NET BPA Conservation Program Savings - Section 7(b)(2) Amounts

Notes Concerning Conservation Savings Adjustments:

1. The aMWs of savings acquired and the annual expenditures are gross amounts with no adjustments for degradation of measures over time. The annual savings amounts for the years 1982-2008 were obtained from the 2009 Conservation Resource Energy Data, "The RED Book." The annual savings totals for years 1982-2008 were based on Tables A and B using the sub-sector line amounts. The gross savings amounts attributable to building codes, market transformation efforts, and C&RD are included in the savings totals. See the spread sheets titled "Total BPA Historical Programmatic Conservation - Gross Savings Amounts," pages D-13 through D17. On pages D-16 and D-17 covering FY2001-2008, the savings attributable to C&RD and CRC are included in the sector totals (e.g., residential, commercial). The C&RD and CRC savings were reallocated / reclassified into a combined C&RD/CRC annual total for simplicity in making the savings adjustments that are outlined at Note 2.

2. Savings and expenditures attributable to C&RD were removed in total for the years prior to 2007 because there was not adequate compliance efforts in place during those years to have sufficient certainty that the savings were achieved. BPA's post -2006 Conservation Program has provided additional compliance requirements surrounding the CRC program to help ensure the achievement of conservation savings associated with the granting of CRC credits. Unlike the FY2001- 2006 time period when the C&RD costs were not included in the revenue requirement, the WP-07 revenue requirement included CRC costs. The rates charged all BPA customers include CRC costs. The Subscription contracts govern power purchases in both the Program Case and the 7(b)(2) Case. The contract power purchase provisions are "take or pay" with no reduction in loads for conservation savings. CRC savings that occur in non-load following areas do not have the capability to reduce the contracted loads in the Program Case or the 7(b)(2) Case. Because the contract provisions do not allow for the reduction of customer loads, the savings associated with non-load following loads were excluded from the 7(b)(2) resource stack. No reduction in expenditures for the CRC program for FY 2007-2008 were made, see the explanation at Note 4 at page D-8.

CRC Non-load Following Conservation Savings Reductions:

The reduction in conservation savings attributable to the CRC program available to the Section 7(b)(2) resource stack for FY 2007-2008 was based on the projected amount of non-load following loads. Approximately 48% of CRC conservation savings for FY2007-2008 were removed from the resource stack.

BPA Customer's Forecasted FY 2010 Total Retail Loads:

Load Following Customers	3,724.0 aMW	51.55%
Non-Load Following Customers	3,500.0 aMW	48.45%
	7,224.0 aMW	100.00%

3. BPA's market transformation efforts have been achieved through the Northwest Energy Efficiency Alliance (NEEA) for FY1999-2008. NEEA's market transformation efforts cover the entire Pacific Northwest Region and beyond. BPA paid for approximately one-half of NEEA's operating budgets during the 1999-2008 time period. BPA's RED Book claims market transformation savings equal to BPA's 50% NEEA funding level. Since BPA's customer's service territories only account for approximately 35% of regional loads, an adjustment was made to reduce savings amounts claimed that occur outside of BPA customer service territories. Market transformation savings were reduced by a second adjustment for BPA's non-load following loads that make up approximately 48% of BPA's loads. The amount of market transformation expenditures were not reduced as explained at Note 5 at page D-9.

BPA's 2010 Wholesale Power Rate Case
BPA 1982-2008 NET Historical Programmatic Conservation Savings - After Adjustments
NET BPA Conservation Program Savings - Section 7(b)(2) Amounts

Notes Concerning Conservation Savings Adjustments Continued:

Note 3 - Continued

Market Transformation Conservation Savings Reductions:

The amount of the reduction to reduce the savings to just those that occur in BPA's customers load service territories was calculated by multiplying the savings (A) that were represented by BPA's 50% funding level by two to arrive at total regional savings (100% = B). This amount (B) was then multiplied by 34.61% to arrive at the savings associated with BPA's Customer's service territory (C). The market transformation adjustment for loads outside of BPA's customer's service territories was the difference between (A) and (C). This adjustment was made to the Gross market transformation savings amounts for FY1999-2009. Forecasted FY 2010 regional and BPA loads are outlined below:

Forecasted FY 2010 <u>Regional Loads</u> (No DSIs)	20,871.0 aMW	100.00%
BPA's Forecasted FY 2010 Loads (No DSIs)	7,224.0 aMW	34.61%

The adjustment to reduce the savings associated with BPA's non-load following loads was made by taking the net savings amounts associated with BPA's load service territory (C) above by the percentage of BPA's non-load following loads (48.45%). This adjustment was made for FY1999-2009.

BPA Customer's Forecasted FY 2010 <u>Total Retail Loads:</u>		
Load Following Customers	3,724.0 aMW	51.55%
Non-Load Following Customers	3,500.0 aMW	48.45%
	7,224.0 aMW	100.00%

Both of these adjustments are reflected by two separate line adjustments to the market transformation savings amounts on pages D-20, D-21, and D-22.

Rate Periods After FY2011:

Under the Regional Dialogue contracts that take effect October 1, 2011, the amount of power purchased by a COU from BPA is the lower of its High Water Mark amount or the utility's net requirements at the start of each rate case. Thus there will be no reduction to conservation savings for Non-load following loads in determining the 7(b)(2) Case load augmentation amounts or to the amount of savings contained in the resource stack.

4. Adjustments were made to remove savings attributable to building codes for the years after 2001. BPA's Conservation Program staff are of the opinion that the benefits from earlier BPA expenditures to achieve Model Energy Code standards had largely been achieved by this time. The savings for the 7(b)(2) resource stack should have a high degree of assurance that the conservation savings would be able to reduce 7(b)(2) Case loads.
5. As previously noted in the table of Gross Conservation Savings, the 2009 RED Book totals have excluded the savings from ConMod Conservation investments that were placed primarily with the aluminum reduction industry. Since most of these plants are no longer operating, and since the amount of load that BPA might serve is not known with a high degree of certainty, the conservation savings from these past investments is not available to reduce loads in the 2010-2015 time period associated with the rate test period. The expenditures for past ConMod investments were removed from the expenditure totals that were included in the 7(b)(2) resource stack.
6. Starting in FY 2007 the RED Book started reporting utility Self-Funded conservation savings in the conservation savings totals. These savings were undertaken by BPA's customers without BPA funding. No expenditures for these savings were reported in the RED Book. These savings for FY 2007-2008 totaled 23.2 aMW, they were removed from the totals to arrive at BPA's conservation efforts that should be included in the 7(b)(2) resource stack.

BPA's 2010 Wholesale Power Rate Case
BPA 1982-2008 NET Historical Programmatic Conservation Savings - After Adjustments
NET BPA Conservation Program Savings - Section 7(b)(2) Amounts
Notes Concerning Conservation Savings Adjustments Continued:

7. The following adjustments were made to the 2009 RED Book's conservation savings for the years 1982-2004:

Building Code Savings	21.1 aMW
Market Transformation Savings	39.7
C&RD Savings	46.1
Rounding	0.1
	107.0 aMW

The total conservation savings per the Red Book for FY1982-2004 was 853.7 aMW after netting out 95.9aMW of ConMod savings. The total savings included in the 7(b)(2) resource stack for those years was 746.7aMW after subtracting the above adjustments totaling 107.0 aMW.

8. The following adjustments were made to the 2009 RED Book's conservation savings for the years 2005-2008:

Utility Self Funded Conservation	23.2 aMW
Market Transformation Savings	49.6 aMW
C&RD and CRC Savings	40.1 aMW
Rounding	(0.5)
	112.4 aMW

The total conservation savings per the RED Book for FY2005-2008 was 222.2 aMW, the total savings included in the 7(b)(2) resource stack for those years was 109.8 aMW after subtracting the above adjustments totaling 112.4 aMW.

BPA Projected Conservation Program Savings - 2009-2015
Net BPA Projected Conservation Program Savings - 2009-2015 - Section 7 (b)(2) Amounts

Notes - Adjustments Made to BPA's Projected Conservation Program Savings Amounts to Arrive at Savings Available to Reduce Loads per the Section 7 (b)(2) Rate Test

1. The conservation saving projections for FY 2009 were based on BPA's second quarter review expenditure levels and projected cost per aMW of savings developed at that time. Projections for the years 2010-2011 come from BPA's Conservation Program Proposals that were finalized in the Integrated Program Review-2 process and were adjusted for the "lapse factor" adjustment that was applied to the Direct Acquisition Capital program amounts as explained at Note-1 to the worksheet titled, "Projected Conservation GROSS and NET EXPENDITURES - 2008-2015," at page D-11. The savings projections for 2012-2015 were based on the assumption that the conservation program design for 2010-2011 continued during the FY2012-2015 time period.
2. Non-load following customer contracted power amounts (customers who purchase the slice and block power products) enjoy the benefit of CRC power bill credits and the resulting savings associated with the purchase of conservation measures in their service areas with the proceeds of these credits. The Administrator's load obligations to these utilities however, is not reduced for these savings (contract power purchase amounts have not been decremented for the conservation savings) thus BPA does not receive a direct benefit from CRC savings associated with non-load following customers. BPA does receive a direct benefit from load following customers associated with the conservation savings that occurs in those utility's service territories. Because BPA does not receive a load reduction benefit from savings associated with non-load following loads, the portion of the CRC savings attributable to non-load following utilities has been removed from the Section 7(b)(2) resource stack. The reduction in conservation savings attributable to non-load following customer service areas is 48.45% based on BPA's FY2010 forecasted load amounts:

BPA's forecasted load following loads - FY2010	3,724.0 aMW	51.55%
BPA's forecasted non-load following loads - FY2010	3,500.0 aMW	48.45%
BPA's total forecasted loads - FY2010	7,224.0 aMW	100.00%

3. BPA's market transformation efforts will be achieved through the Northwest Energy Efficiency Alliance (NEEA) during the 2010-2015 period of time. NEEA's market transformation efforts cover the entire Pacific Northwest Region and beyond. BPA is projected to pay for approximately 35% of NEEA's operating budgets during the FY2010-2015 time period. Since BPA's projected funding level for NEEA for FY2010-2015 approximate BPA customer's load service territories' share of regional loads, no adjustment for savings occurring outside of BPA's service territory was necessary for the FY2010-2015 time period. Market transformation savings for FY2010-2015 were reduced for BPA's non-load following loads that make-up approximately 48% of BPA's loads as described in Note 2 above. The savings for FY2009 were adjusted for savings claimed in the RED Book that occur outside of BPA's customer's load service territories. The adjustments for FY 2009 were described at Note 3 on page D-24. These adjustments are reflected in the market transformation savings amounts on page D-26.

BPA's 2010 Wholesale Power Rate Case
BPA Projected Conservation Program Savings - 2009-2015
Net BPA Projected Conservation Program Savings - 2009-2015 - Section 7 (b)(2) Amounts

4. Rate Periods After FY2011:

Under the Regional Dialogue contracts that take effect October 1, 2011, the amount of power purchased by a COU from BPA is the lower of its High Water Mark amount or the utility's net requirements at the start of each rate case. Thus there will be no reduction to conservation savings for Non-load following loads in determining the 7(b)(2) Case load augmentation amounts or to the amount of savings contained in the resource stack.

5. In summary, the following adjustments were made to the conservation savings projected for the years 2009-2015:

CRC Savings	63.4 aMW
Market Transformation Savings	<u>58.7 aMW</u>
	<u>122.1 aMW</u>

The total projected conservation savings to be achieved by BPA's Conservation Program for FYs 2009-2015 is 404.8 aMW. The total savings included in the 7(b)(2) resource stack for those years is 282.7 aMW.

33	Percentages			69.16%		30.84%		100.00%		
35	Average Cost of conservation Savings - \$/aMW							\$2,854.4		
37	Note 1 - The amount of conservation in the resource stack for FY2001-2009 (231.7aMW) together with billing credit									
38	resources contained in the resource stack of 10.1 aMW establish the amount of the load resource balance difference									
39	between the Program Case and the 7(b)(2) Case at the start of the Rate Test Period (October 1, 2009) amounting									
40	to 241.8 aMW.									
42	Note 2 - Historical conservation investments that occurred prior to FY 2001 that will have been fully amortized before the									
43	end of the rate test period in FY 2015, based on a composite useful life of 15 years, are viewed as obsolete conservation									
44	investments that are not includable in the 7(b)(2) resource stack.									
46	Note 3 - Conservation saving amounts for FY2001-2008 were based on the information contained in Tables A and B of the									
47	Conservation Resource Energy Data for FY 2009 (The RED Book which covered FY1982-2008). Those savings amounts									
48	were then adjusted to arrive at the actual savings that would reduce the Administrator's load obligation in the 7(b)(2) Case.									
49	The projected FY 2009 savings and cost amounts were based on the 2nd Quarter review financial summary. Conservation									
50	costs and related savings amounts for FY 2010-2015 were revised for the final conservation spending levels that were									
51	adopted in the IPR - 2 process that concluded in May 2009. The conservation costs for FY 2001-2015 contain an									
52	allocation of general and administrative costs following full absorption costing principles.									
54	Note 4 - Conservation costs for FY2001-FY2008 were based on the conservation costs contained in Table D of the									
55	Conservation Resource Energy Data for FY 2009. The costs contained in the RED Book do not contain general and									
56	administrative overhead costs. The costs displayed in Table D were increased for general and administrative costs.									
57	The allocation of general and administrative costs was based on the relationship of total direct staffing costs of BPA's									
58	Energy Efficiency organization and the Power Services Business Line. The amount of G & A administrative costs									
59	allocated to conservation resources was a portion of the total G & A costs assigned to Power Services and Energy									
60	Efficiency.
